Say total expense of a voyage to and from Allahabad, occupying one month - - - - - - - - - - -	*Rupees*	5,000	–

If the former calculation of the earning be admitted, the expense of the month would be covered by the voyage upwards, and the return voyage would be entirely profit.

After a few successful voyages the four cabins proposed would certainly let for as many thousand rupees each way[*]; so great a saving of time and some saving in expense, would be a strong inducement to forego the ample accommodation of a pinnace[†] for the sufficient one of a steam vessel.

I come now to the consideration of a subject on which I think the success of the undertaking will very principally depend; I mean the organization of an establishment of pilots for the great river.

Whilst many parts of the Ganges near the debouchure of the different rivers, and particularly below Patna, are subject to continual changes, others above that city, and particularly where the stream is confined between hankur banks, remain as they were when Colonel Colebrooke's survey was made. These places require little or more than to be once well known to be navigated with confidence, whilst others will require constant observation and the most skilful pilots.

On our late voyage we were twice fortunate in procuring men, who, having recently accompanied boats, were well acquainted with that part of the river through which they undertook the guidance of the vessel, and on these occasions our difficulties were fewer and our progress greater than under other circumstances.

The usual method of piloting the country boats is for a small boat to precede the larger one, half a mile, and by signal to give them timely notice of danger, and point out the course that should be taken to avoid it. It is very evident that such pilotage would be of no service to steam vessels, nor do I believe that a mere order to the darogas and Ghaut managers to provide and prepare more efficient men, would be attended with any benefit, even though the encouragement of certain payment on a liberal scale should be held out for services to be performed.

I would suggest then the appointment of a superintendant, a person of energy, capable of enduring fatigue, and having at heart more the successful result of his undertaking than the receipt of his salary; to him should be entrusted the organization of a system of pilotage and

---

[*] Each way, *i. e. Rs.* 4,000 for the four cabins (1,000 each) for the voyage up, and the same for the voyage down.

[†] The hire of pinnaces to Allahabad varies with the size of the boat from *Rs.* 2,200 to *Rs.* 900, and of budgerows from 800 to 500.

Appendix, No. 25.

(9) Letter from Capt. J. H. Johnston, to H. T. Prinsep, Esq.; 24 November 1828.

and a general observance of the river, its actual and probable changes, and, in communication with the zemindars and magistrates, the timely removal of trees or pucka buildings likely to fall into the river, the removal during the dry state of the river of small knowls of konkur rock or other obstruction from the fair channel, the protection of the channels or banks, when it may be done at small expense, and in the same way, with the previous sanction of Government, the division of the stream through nullahs, or its direction against banks and chers that would easily admit its encroachment, and through which it would in time make its way, to the improvement of the navigation; with other minor duties which need not be enumerated.

The principal, or at any rate the first to be undertaken, will be the organization and training of an efficient pilot establishment, and, without particular reference to deviation that local circumstances may point out as advantageous, I will suggest that generally the knowledge of the pilots shall not be required to extend beyond 20 miles in the great river. In the Bhagiratty and in the Jellinghee, if its navigation be equally simple, pilots would hardly be required after the first voyages.

Between the Bhagiratty and Allahabad twenty-eight stations would be required, and selecting from amongst the mangees and pilots at each station two of the most intelligent, with eight others for boats' crews, each pilot being provided with a very light canoe, fitted as a life-boat, a perfect knowledge of the river would be very easily acquired.

The pilot should be examined by the superintendant, and by him instructed in the manner of placing buoys or landmarks in the most eligible and necessary places for making the crossing, and the passage between the sands, &c. The buoys and landmarks should be of the most simple and least expensive materials, such as bamboos or long poles, gourds, logs of light trees, &c., with burnt clay, stones, rock, &c., and fastened with rattans, twisted fibres, reeds, &c.; these it would be a chief duty of the pilots to place; landmarks should be preferred to buoys, being less liable to accident, and would always answer where the river is not very wide.

In the first instance it would be necessary to pay these pilots a monthly salary, and when sufficient boats were established to admit of their earning a livelihood by their constant employment, this system might be continued or not.

I think, in the first instance, in addition to a small pilotage to be allowed for each vessel safely conducted, a monthly salary of five rupees to each pilot, and two and a half to each of the crew, who should all be considered as persons in training for pilots, would ensure the services of intelligent men. The canoe or boat must also be provided at the charge of Government.

I will close this report with a few suggestions for the conduct of steam vessels in the Ganges.

It is eminently necessary that the vessel should be under complete command of the helm; she should be provided with two bower anchors; the one sufficiently heavy to ride her under ordinary circumstances, the other capable of holding her with a short, say 15 fathoms, scope of cable in a strong tides'-way, and over the stern should hang a similar anchor, to the lightest bower a kedge anchor, and two grapnels with 60 fathoms of a good five-inch hawser; a two-and-a-half tow-line, and a coil of whale-line would complete the ground tackle. She should be supplied with two boats, one a small light boat, to be hoisted abaft the paddle-box, the other to tow astern, a boat capable of carrying out a bower anchor and 15 fathoms of chain, both fitted as life-boats; and thus provided, the vessel would be well prepared for getting off a sand in case of accident.

When the vessel is weighing, from the moment she is short a second anchor should be ready for letting go, to prevent any accident that may arise from the engine not starting, or other causes to which a ship in a tides'-way is always exposed, and it is desirable to have a hand constantly by the anchor.

The greatest attention to the helm and a most vigilant look-out will be required of the officer in charge of the deck, and however confident of his channel, he should never be without two leads going, one on the quarter, the other from a platform under the bowspirit.

Proceeding against the stream, should the water shoal, it will be a natural inference that the ship is running up to a sand, and the engine should be slowed in time, or stop, according to the strength of the current.

When running to avoid the current on the edge of a sand, round a projecting curve, should the water shoal, try immediately towards the strong current and deepen, and be careful not to leave any still water and smooth between the vessel and it, or you may get between sands with knowls upon them, or into a *cul de sac*, and find it difficult to get out again. Sands are not unfrequently disposed thus:

* * * *

Should the water shoal very suddenly from four or five fathoms to one or one and one-half, presumption would be that the vessel had got on a cher or tsield under water, and she should be taken off immediately and tied to the opposite side of the channel; such a circumstance would be likely to occur at a place near Bherya, where the channel runs thus:

* * * * * * *

In general the strong current runs on the concaved bank, and as the reaches vary, it is necessary to cross from side to side of the river; the crossing requires the most particular attention: with this the channel may generally be distinguished, and the broken appearances of the bank, with which the eye soon becomes acquainted, is a sure indication of its course.

On anchoring at night, on approaching the shore, care should be taken to avoid eddies: the strong current will of course be avoided as much as possible.

It

It is always very desirable to have some landmark, by which it may be seen if the vessel drives or ports; and when it is considered that such an accident would in all probability be fatal to the vessel, too much precaution cannot be recommended for her security during the night.

Descending the stream the greatest care will be necessary, and it will scarcely be safe to apply the whole power of the engine. With one boiler and half the ordinary consumption of fuel, an average rate of eight miles may be kept up, when the channel is known and when the current runs free.

At all crossings the engines should be slowed, and they should be taken at their highest point; for it would evidently be better to touch on the tail than on the head of a sand, and in crossing between sands when the channel is not perfectly known, the vessel's head should be put up the stream, and the course be made as it were sideways, by edging over; in the event of shoaling within a fathom of the vessel's draught, the anchor should be immediately dropt, and the boat sent to explore.

In the event of the vessel touching a sand, unless she be on the tail of it, the anchor should be immediately let go either ahead or astern, according to circumstances, and every means should be exerted to get her head or stern up the stream and to secure her from driving; for if the current runs over the sand and the ship is prevented from drifting further on, the probability is that in a few hours the sand would be washed from under her, and a gentle motion of the engine would assist much in dispersing it.

In fine, the safety of a steam vessel's navigation on the Ganges will depend on a good look out, with the proper use of the lead and the anchors.

I have, &c.

Calcutta, 24 November 1828. (signed) *J. H. Johnston.*

Note (A.)

The ship having swung to her anchor, and not being in a situation to receive any damage, I took the pinnace to sound and discover a passage. The pilot-boat made the signal for having three fathoms water when I was within a cable's length of her, in three feet, in a line nearly between her and the ship. I endeavoured, but in vain, to pull round the spit of the sand which lay between us, to find the proper channel for the Hooghly; the current was too strong to make head against it, and pulled in shore, deepening gradually into two and three fathoms, which made it widest: there were two channels, one on each side the sand. I was now abreast the pilot-boat in two and a half fathoms, with the sand between us, and I observed the Hooghly under weigh, endeavouring to near the pilot-boat. I feared she would get into the shoal water I had just passed, but had no means of desiring she would anchor: presently she took the ground, and swung broadside to the tide. I was some time reaching her, having to track the boat up in shore. When in a position to make the vessel, I put off, sounding down to her; within a small cable's length I found one-quarter one, and close to her five feet six inches; this water would float her, and it was very desirable to get her into it.

On arriving on board I found the vessel had taken the point of the spit, that we hung amidships, where the sand appeared dry above water; and that there was five feet water under the stern and six under the bow. After ordering a grapnel and coil of rope to be put into the pinnace, I wrote to the magistrate at Allahabad, Mr. Brown, for boats to receive our stores, should it have become necessary to lighten the vessel; throwing coals overboard for this purpose was out of the question, as they would have formed under our bottom a hard and dangerous bed.

I went with the pinnace and laid a grapnel about two-thirds a cable's length on her starboard bow, off the cat-head, the vessel being on shore on her larboard side; by means of the grapnel-rope (of which we made a guess-warp) we handed out first a kedge and four-inch hawser, and by that the best bower and 40 fathoms of chain; on account of the rapidity of the stream running five knots, this occupied several hours. At 5 o'clock we began to heave, and having brought the ship's head up two points, set on the steam, but found that we only forced the ship along the sand, an effect not desirable, as it was likely to injure the copper; we also appeared to bring the anchor home. My object was, even if I could heave off, to bring the vessel's head up the stream, but being hung amidships, this could not be accomplished against a strong current with the purchase we had, the anchors were not sufficient to hold against the strain we could heave.

The vessel was now so situated as to receive the stream of the current at a right angle with her beam, and I considered that if her stern could be brought a little up, the stream taking her abaft the beam, it must, if it *moved* her at all, move her in its own direction round the sand.

To effect this, the kedge and grapnel-ropes were taken in over the stern and hove well taught; the result justified the expectation; the ship gradually changed her position during the night, until on the morning of the 4th at 2 o'clock she swung to the bower anchor in five feet water; at day-light we set on the steam and sheered into two fathoms, where we let go the small bower and sent one of four boats sent by the magistrate of Allahabad to our assistance to weigh the best bower. Unfortunately as the ropes on the kedge and grapnel were taken in a boat to be under-run, they parted, and could not be recovered by creeping or sweeping. At 2 P. M. we proceeded on our voyage.

Note (B.)

A rate of progress through the water of seven miles per hour against a current of five would allow only an advance of two; but we avoided the strength of the current by

Appendix, No. 25.

(9) Letter from Capt. J. H. Johnston, to H. T. Prinsep, Esq.; 24 November 1828.

going on the edges of sands, and occasionally through nullahs and small channels, the average rapidity of the current is merely therefore a matter of conjecture, and its rate was accelerated or diminished according as it flowed through confined channels or over a broad expanse.

Note (C.)

It is unnecessary for me to point out how these alterations may be effected without weakening the vessel or increasing her draught, but if my opinions on the subject are required, I shall be happy to give them.

Note (D.)

Calculating 50 square feet to the ton measurement, the space 34 by 16 by 6 is capable of receiving 64 tons of goods, but the limit of the weight that may be stowed in it is 20, and on this weight I have made my calculations for returns.

(10.) Letter from Capt. T. Prinsep, to H. T. Prinsep, Esq.; 1 November 1828.

(10.)—LETTER from Captain *Thomas Prinsep*, Engineer, to *H. T. Prinsep*, Esq., Secretary to the Bengal Government, dated 1 November 1828.

Sir,

AGREEABLY to the orders of the Governor-general in Council of the 7th of August last, I do myself the honour of addressing to you the following observations upon the result of the experimental voyage to Allahabad in the Honourable Company's steamer, Hooghly.

I have hitherto delayed to submit my reports, in the hope of being enabled to transmit at the same time corrected charts of the river, prepared during the voyage, upon the basis of Colonel Colebrooke's former surveys, which might I thought prove of greater utility than any verbal instructions or journal of the expedition, in all future voyages of the same nature; other duties, and the labour of preparing such charts on a large scale for a distance so great as 800 miles, have prevented my accomplishing the task in the time I had anticipated, and I shall therefore no longer withhold what remarks I may have to submit regarding the expedition, and the grand object of establishing a communication with the Upper Provinces by steam, reserving such particular observations as apply more particularly to the river, in detail, for a future memorandum to accompany the charts when prepared.

The expedition started from Calcutta on the 8th of September, reached the great river, entering by a mouth formed of late years, opposite Choka, on the evening of the 12th, having passed from Calcutta through the Bhagirattee or Moorshedabad river, the distance 232 miles, in 59 hours of actual steaming.

GENERAL STATEMENT OF PROGRESS.

	Distance.	Time going.		Rate per Hour.	Time returning.		At rate Miles.
	Miles.	Hrs.	Min.		Hrs.	Min.	
Calcutta to Choka Mouth -	232	59	–	$3\frac{93}{100}$	25	40	9
Choka to Patna - - -	248	78	20	$3\frac{03}{100}$	46	27	$5\frac{3}{10}$
Patna to Ghazeepore - -	127	42	36	3	21	25	$5\frac{9}{10}$
Ghazeepore to Allahabad -	200	59	24	$3\frac{36}{100}$	33	43	$5\frac{9}{10}$
Total Miles - -	797	239	20	$3\frac{34}{100}$	127	15	$6\frac{2}{10}$

The whole distance as by the foregoing statement has been performed in something less than 20 days of 12 hours each, actual steaming; and the average rate per hour of her ascending voyage is thus something less than three and a-half miles. The steamer reached Allahabad on the 24th morning of her voyage, and returned to Calcutta in safety in 10 days and 7½ hours of steaming, days of the same duration of 12 hours. I have divided the voyage in the above manner to assist the following remarks; but as a view of the daily performance of the Hooghly may be instructive, I annex a statement showing each day's anchorage, the work done, and hours of steaming, with remarks as to the reasons of the great difference as well in the hourly average of progress as in the daily run.

The first division of the voyage, 232 miles, from Calcutta to the mouth of the Moorshedabad river, Bhagirattee exhibits an average rate of progress exceeding that of any following. The navigation of this division bears a totally different character from the rest. Our passage in ascending happened when the current may be considered at its extreme of velocity, and the surface of the water appeared to be within very little of its extreme elevation.

The utmost average rate of our progress for any connected time in any part of the Bhagirattee against the stream, was four and a quarter miles per hour; the average general rate was three and a half, and as our actual speed, making due allowances for the additional resistance when the course is so winding and our steering imperfect, could scarce have exceeded seven miles per hour average: this will leave for the average extreme current of the Bhagirattee in September three and a half miles per hour, and there are particular places where it reaches five miles per hour.

This average velocity of three and a half miles per hour decreases gradually from the middle of September with the fall of the river, nor is the velocity increased again by any later adventitious rise of the waters. On our return in the middle of October we found the waters

waters within very little (scarce two feet) of their height in the middle of September, the wind then blowing hard from the south-east. The average current at this time was evidently rather short of two miles per hour; while the river is in this state, with the water high and current slack, the navigation is of course most favourable for steamers in every point of view, and we were enabled to perform what, perhaps, might have been imprudent if not impossible in any other state of the river, to steam at full power from the entrance at Chokah to the confluence with the Jellinghee at Nuddea, a distance of 156½ miles in 17 hours, averaging an hourly rate of nine and one-fifth miles. If however this observed decrease in the velocity of the Bhagirattee while the waters are high during October, is general every year, it must evidently be one of the chief reasons that the navigation is closed during the dry months.

It is already known that the passage of the Bhagirattee is closed against vessels of any draught during many months of the year; the passage will in its present constitution be easy to steamers from the beginning of July to the end of October. In June and November, if the passage is at all practicable, the average progress of steamers, on account of the confined state of the channel and the caution necessary, will not exceed that attained when the waters are the highest, in August and September.

I have to regret that circumstances prevented our returning by the Jellingee, by which some comparison might have been made between the two streams, of which in point of general advantage the Jellingee has always been preferred.

The Bhagirattee has manifestly been improved since the surveys of Majors Rennell and Colebrooke, and the distance from Nuddea to Sooty and Choka appears to have been shortened by nearly 10 miles: that it is still capable of further improvement is beyond a doubt; but it is still very questionable whether any means could be contrived to secure a sufficiency of water throughout the year in this stream.

In the second division of the voyage, from the head of the Bhagrattee, distance 248 miles to Patna, the average progress shown by the statement was less than in any other division. The general velocity of current was found the greatest in this portion of the river: the bed of the river appears most subject to changes, and the expanse of water being more considerable, the winds are more violent and of greater impediment to navigation in any but a well-found and strong-built boat. In this part of the river, however, happily, there is a more frequent occurrence of side channels, by which vessels of all kinds and also steamers may escape the fury of the greater branches of the river, and navigate in comparatively slack and smooth water: such channels are necessarily available only during the height of the river in July, August, September and sometimes October; but in the other months, from the waters being low, vessels are protected from the wind by the height of the banks, and the diminished velocity of the current in these months gives them the same advantage in point of speed as the side channels, when the river is high.

Want of proper pilots and ignorance whether such channels afforded sufficient water for the draught of the Hooghly, compelled us in general to follow the main stream in our way up, and by way of avoiding the main strength of the current, to keep the shelving side, feeling our way in about two and a half and three fathoms of water. There was perhaps as much danger (if there was any in either case) in following such a course as in attempting a side channel, with only a dubious assurance that there was a path open to us, and a vessel following such track will always have to contend against a stronger current than in a side channel; but where, as in our case, no pilot of any trust could even inform us generally of the nature of such side channels, the track followed was evidently the most secure and judicious.

Future voyages at the same season will probably exhibit a much more favourable result, and I anticipate that 62 hours steaming will, after very little experience of the proper track to pursue, be sufficient for the passage from the head of the Bhagirattee to Patna in the height of the river, less when the waters are low. In the present expedition the two days which exhibit the most favourable progress were the 11th and 13th; during both these days we had the advantage of side channels, and on the last day (13th) the additional advantage of an experimental pilot.

In this part of the river there is no fear of the navigation being shut against steam vessels at any period of the year; the channel is here, it is true, subject to more changes, sudden and considerable, than in the other parts, but is always deep. The particular parts subject to change will be pointed out in the charts. The many occurrences of anything like permanent banks in our route were from Rajmahal to Colgong, a short distance, near Bogilpoor, the Janguery rocks and Monghir, and generally in all these places, the opposite permanent bank is so remote, and the interval filled up with low plains and islands (churs) of such untenacious quality, the substratum being universally pure river sand, that it would be almost impossible in any place where these permanent banks are washed by the main stream, to keep it in such a course by any of the usual methods of preserving rivers in their beds, and the problem is of course much more difficult where the course of the main stream lies solely between islands of this unstable description. Majors Rennell and Colebrooke well describe the formation and quality of these churs.

The third division of our voyage between Patna and Ghazeepore, 127 miles, is likewise subject to the same remark, the want of permanence in the channel and want of stability generally of its banks. The permanent bank from the mouth of the Gogan or Dewar at * Mainyeeghat, by Revelgunge, Chuprah to Cheeran, is now only washed by the main stream at Revelgunge and Cheeran.

The right bank of the river is remote and of very light quality, and the river rushes in a straight course and very rapid current between sand and islands of its own recent formation,

* The most violent of the tributaries of the Ganges.

from Revelgunge to Cheeran and from Cheeran to Dinapore, below the outlet of the Soane. Above the mouth of the Gogra the appearance of the river somewhat alters, and the fury of the stream is somewhat abated. The banks hence to Buxar being of light alluvial quality, have suffered considerable changes since the survey of Major Colebrooke, but they have been of a less sudden and extensive nature than the changes of the division below Patna. At Buxar there is every appearance of stability in the bed and banks, and the navigation is in every way easy.

Above Buxar the river has again expanded itself over a large extent, and the bed is of a very shifting nature hence to Ghazeepore.

The Ghospore creek above Buxar is the only side channel we were enabled to follow in this division; having therefore had generally to struggle against the main stream, our average hourly progress was somewhat less than might have been expected against what was evidently a diminished current.

Below Buxar.

During the return voyage our average progress was likewise slower than might have been expected, on account of some difficulty in the Buxar reach and above the outlet of the Gogra.

The confluence of the two rivers Gogra and Soane frequently, by the check that their sudden freshes create, render the vicinity of their outlets shallow and difficult to navigate, from their uncertainty; but, generally speaking, I anticipate that nothing will ever occur which will offer insuperable difficulty to the passage of steamers at all seasons in this division of the voyage.

The last division of the voyage from Ghazeepore to Allahabad is in every respect of a different character from the preceding. The places where the river has expanded itself over a surface beyond what is required for its channel, are now of less frequent occurrence; the lofty banks of its red clay alternating with occasional strata of kunkur and other stiff clays, at the same time that they give an appearance of comparative sterility to the traveller who has just left the lower districts, convey an impression of wall-like stability, sufficient to defy the utmost fury of the Ganges, which is here occasionally straightened to unnatural dimensions, and follows frequently a curvature apparently inappropriate to the magnitude of the following stream.

The river in this division may be considered permanent in all respects but in the depth of its channel.

Our progress in ascending this part of the river was easy, and attended with a very satisfactory general average in the hourly and daily rates.

The current, however, was by no means at what may be called its greatest violence, and our track universally lay in the main stream, and frequently in the strongest part of the current; our return through the first part of this division was accompanied with much delay, from causes which I will proceed to explain.

In these upper parts of the river Ganges the variations of the water level *, as might be expected, are much greater annually and daily than in the lower parts. At Benares the extreme known rise is 45 feet, while in other years (as the present year) its waters only reach 34 feet; at Allahabad the extreme is 45 feet while in other years (as the present) it only reached the 29th; at Colgong its extreme rise is 29 ½ feet, while in the driest seasons it rises above the 28th; at Jellinghee the variation is, I believe, only between 27 and 25 ½ feet.

The same remark also applies to the daily variations of rise and fall; at Allahabad the river frequently rises 20 feet in five or six days, and falls as rapidly; at Benares its rise and fall is somewhat more gradual, although still subject to considerable and sudden variation; at Colgong, on the contrary, although the date of the first rise of the river is subject to some uncertainty, when once risen, the indigo and rice cultivator knows exactly how to judge of the fall and period of the waters; sudden and unexpected rise or fall at Allahabad would incommode none but the boatman who had been incautious in the selection of his place of anchorage, one single foot of extraordinary rise or unexpected variation of the surface at Colgong or Jellinghee might inundate vast districts or destroy whole crops, either by inundation or withholding the supply of water necessary to their growth.

I mention this not as a new discovery, or in any way contrary to the laws of rivers, but in order to explain some circumstances which struck my attention in the nature of the sands and shoal channels below and above Allahabad, and which a comparison of the water registers kept at the different points of the river above could explain.

It

* Extreme Rise of the Ganges at			Rise in 1828.		Usually falls by 15th October to	Fell this, or by 1st October, to		Rose during September Equinoxes to
	Ft.	*In.*	*Ft.*	*In.*	*Feet.*	*Ft.*	*In.*	*Feet.*
Allahabad	45	—	29	—	6	14	6	22
Benares	45	—	34	—	10	22	—	28
Colgong	29	6	28	3	18	24	—	26 (a)
Jellinghee	27	—	25	9	20	22	6	25 (a)

(a) These two assumed; I have not the exact registers.

It appears to me, on a careful view of the subject *, that during the first rise of the river, until it has reached its height, the currents in the upper division of the river, from Allahabad to Ghazeepore, must invariably be found the strongest, and this velocity may last until the end of August, when the river has generally declined considerably †. From this date the velocity of the current must subside, although the waters generally rise again, and are subject to much undulation; between August and the 1st of October the currents will universally be found abated. In this state of things the channels fill, and the crossing places from one steep bank to another, always more shallow than the channel round the bend itself, choak occasionally, as we found, to a height of one fathom above the level at which they are known to remain in the dry season.

This principle seems to be most powerful in and about the equinoxes of September, when there is always a rise of the river below, sometimes extending to the upper parts of the river; and unfortunately the fall of the river after this period, which is sudden above, is not accompanied by an equally sudden fall below, so that the upper currents during this fall are not sufficiently rapid to remedy the evil.

The experiments of Captain Smith upon the velocity of the current at Papamow this year, show that on the 7th September, when the waters stood at 11 feet 10 inches above their lowest level, the average rate was seven miles three furlongs. On the 18th September the water having risen to 15 feet nine inches, the average velocity of current was three miles three furlongs, extreme four miles one furlong. The rapidity of the current appeared then to abate even below this till the 2d October, when the waters had fallen to 13 feet 9 inches, although the river had risen in the interior to 22 feet. On the first October the depth of water in the channel of the Papamow passage was left at only nine feet.

At the time these observations were made there appeared to be no unusual influx of water from the Jumna to account for such a check, and our own observation upon the currents below lead me to place every reliance upon the truth of the experiments

This curious circumstance on our return between Allahabad and Benares frequently arrested our progress and created apprehension of our having deserted the proper channel, for in many crossing places where in our ascending voyage we had found four fathoms, on our return we only found two, and two and a half, sometimes even less; the water had not fallen two fathoms in the interior, and still had to fall upwards of two fathoms more, the known channel of the dry season in these places being known to yield one fathom at least.

If we had been sufficiently aware of this circumstance, or any means had been provided of certifying us of our being in the proper track, although it appeared so shallow, many an hour might have been spared in the return voyage, and if it could be so provided, steamers might advance with confidence at an average rate of eight or 12 miles an hour from Allahabad to Benares. But unless such is the case, the commander of every steamer will do wise to follow the plan adopted by Captain Johnston, of advancing at an easy rate of steaming, not exceeding two miles per hour with the current, drop his anchor in any case of gradual shoaling, turn with his head up stream and drift easily over the difficulty.

In the return voyage to Benares the steamer Hooghly might have been excelled, and I believe was so by some native boats, her average progress not having exceeded five and a half miles, and the current being nearly four.

It fortunately happens that in this division of our route, where these difficulties occurred in greatest frequency, ferries are also of constant occurrence, and I should humbly conceive that through the means of the local officers it would not be difficult to make an arrangement with the proprietors of such ferries to induce them to act as pilots to vessels on their voyage, as also to place a bamboo float-buoy of some simple construction, to point out these crossings; care only must be taken that this buoy does not drift from its position with the shifting sands of the bed, or remain to mislead any passenger into a channel which has been choaked suddenly by some cause.

The particular principle adduced as so highly detrimental to the navigation between Allahabad and Benares will, I conceive, apply still more forcibly to the parts of the river immediately above Allahabad towards Cawnpore; and in those parts of the river where by some accident or natural cause the river has expanded its bed beyond the width necessary to pursue a channel proportioned to its expenditure of water, it is not surprising that shallows are formed over which the river, after its decline, must rush with considerable rapidity, since before its fall the level of the bed was much above the low-water mark in the dry season, and it thus has to excavate a channel which must keep pace with the further decline of the waters.

I have heard it advanced that the current (partially of course) is nearly of the same velocity in January of some years as at the height of the river in August and September, but I should like to see the fact authenticated by experiment. Certain it is that it may well exceed what Captain Smith's experiments proved it to be during the September rise of this year, or average three and a half.

The difficulties of the navigation of the Upper Ganges arise more from the cause adduced than from any insuperable velocity of its currents.

The waters that are brought down by the Ganges, even from the place it leaves its strong bed at Hurdwar, are represented to be at all seasons of the year coloured and full of sediment, and it may be well said that the motion of sand along its bed, the corrosion of its banks where their nature is yielding, and the formation of new channels and desertion of old ones, is constant and unremitted.

To make a comparison between the Ganges and Mississippi, the only river of equal or greater magnitude upon which steam navigation has been introduced with success, it is only necessary to compare the slope which the river has attained, and which, for argument's sake,

---

* 20th August.

† It falls usually to 15 feet by the 7th September; it fell in 1828 to 12.

we will consider as the two limits to which steam navigation is carried on with certainty. The height of Allahabad above what may be assumed as the level of the sea, by barometer, is 348 *; perhaps, in reality, more for the distance of 800 miles †. The average slope would thus be nearly five inches per mile, and assuming that the slope at Jellingee is between three and four, that at Allahabad must have attained six inches per mile. I came to the same conclusion by drawing an inference between the barometrical ‡ levels of Benares and Futtyghur.

In the Mississippi the height of the mouth of the Ohio is stated 300 feet above the sea, that of Louisville, therefore, 1,500 § miles from the sea, cannot exceed 350 feet. The average being thus under three inches, it cannot be supposed that the river at Louisville can have attained five inches.

Vide Warden's Statistics of North America.

It is therefore manifest that when steamers have navigated to Allahabad, they have reached much beyond a parallel position to Louisville on the Ohio. I am aware that steamers pass above this place, and are actually built and floated down in the height of the river from as high as Pittsburg, but I cannot learn from any source that the navigation is carried on with any certainty or success above Louisville and Cincinnati.

The two rivers will not, I am aware, admit of a close comparison; for, although both are subject to permanent freshes, the Ganges, unlike the Mississippi, is chiefly fed by tropical rains. We have no data to form any comparison with a more tropical river.

My own personal knowledge cannot finally determine the question, whether a vessel constructed like the Hooghly, or even upon an improved principle and less draught of water, will be able to navigate beyond Allahabad to Cawnpore at all, at any season of the year. Our having been deterred from attempting the Papamow shoal is by no means sufficient to establish Allahabad as the limit to which the Hooghly could be carried with safety and certainty. The period at which we had the option was perhaps the most unlucky in the year. I have, in my own mind, no doubt, after being able to travel between Cawnpore and Allahabad from the 1st of July to the end of September, and returning without being arrested by any insuperable difficulty. At other seasons I cannot speak with equal confidence of her success.

The result of the present expedition has furnished sufficient data to prove both the advantage and ease of steam navigation, in point of celerity and security, over every other method at present in use upon the Ganges. The trial was perhaps made under every possible disadvantage; the vessel having to struggle with the strongest currents in her way up, and in her way back, the river being rapidly on the decline, the daily fall of the upper river where the chief danger of grounding was apprehended, being by measurement nearly one foot per diem. That she has triumphed, even against such great odds, there can be no question; and the way in which she succeeded in extricating herself from the sands on the only two occasions of her touching the ground in the return voyage, is evidence sufficient both of her strength and of the capability of such a vessel.

The manner in which this took place may perhaps be worth narrating. The first and most important accident of this kind took place only six miles from Allahabad, in a channel we knew to be intricate, but through which a pilot undertook to guide us; we grounded on a spit of sand, the current running at a rate of about four miles, and dropt our anchor at the moment of grounding. The current immediately acted upon the side of the vessel, and drifted us further on the sand, and with our broadside to the current. In this position no power of steam could help us. We then hauled in our anchor till the bow pointed up stream. The steam succeeded immediately in extricating the vessel. Unfortunately we did not clear the sands, and grounded again without dropping our anchor. The vessel then sheered round as before, with her broadside to the stream, and appeared to settle in the sand, with a dry bank forming immediately below, and the current eating away a channel under our bow and stern. In this predicament, with much delay and some difficulty against such a current, we carried out an anchor up stream, but failed in hauling her head sufficiently to the stream to enable the steam to work with effect. We then before dark likewise attached other anchors to the stern, holding the vessel to the three anchors as it were on a pivot, with cables to the bow and stern. By dawn we found the vessel just at the lower end of the sand afloat, and riding to her heaviest anchor, the others just having parted. The distance of sand over which the current must have drifted us in the course of the night was five furlongs. The way in which it may be accounted for is simple, and need not be adduced. It is sufficient to say, that there will be few cases in which if a steamer takes the ground

	Feet.
* Altitude by barometer of Benares - - - - - - - - -	280
Add, supposed difference of Benares and Allahabad - - - - -	68
	348

† Taken from the limit of the tide.

‡ *Vide* Proceedings of Benares, obs. 1 of 1817.

Difference of Benares and Furruckabad 280 feet; distance by Ramell 354 miles, which, with allowances, would leave the general slope nine inches per mile between these two places.

§ By the difference of elevation of the mouth of the Scioto and Pittsbury, distance 388 miles, difference of elevation 216 feet, the general slope between these places is nearly seven inches per mile. The river therefore must have attained the slope of six inches per mile somewhere above the confluence of the Scioto and Ohio.

ground on her return in a rapid current of four to five miles, she may not, either by hauling up her anchor, extricate herself by power of steam, or in case of failure, manage by anchors, or some similar manner, to drift herself into the channel which must invariably form by the mere force of the current under her bow and stern, and thus free herself. Touching the ground in the way up the stream can never be of much consequence, and it is only necessary that the vessel should have strength enough to put them beyond the fear of injury from the current acting upon them in this manner, and to provide them with good anchors and cables, and the means of sending them up the stream. I will now pass to the subject of the particular capabilities of the Hooghly steamer, for the navigation to Allahabad, as also some few remarks upon the points which I consider to be most essential in the contriving of future vessels for the purpose. The particular construction of such vessels is too practical a question for one not himself a naval architect.

It is established by experiment, that the Hooghly has strength sufficient to prevent any injury from grounding upon sand in a current of five miles.

It is also established, that a speed of seven miles and a half to eight miles is sufficient to ensure a vessel of four feet and a half draught of water and less, the average of three miles at the highest state of the waters in ascending the Ganges and, by inference, a much greater average rate in the low state of the river.

It is established that the Hooghly, with some improvement to her steering, is not subject, in her way up, to any of the many dangers enumerated in the General Department Secretary's Minute as incidental to a voyage up the Ganges in the craft now generally in use, and that in her descending voyage she is only necessarily subject to that particular one of drifting upon a concealed sand bank, an accident which occurred twice, and from which she found a means of extricating herself, as future vessels may likewise, even if proper measures cannot secure them against such casualty.

It is established that the passage of a vessel with four one-eighth, or less draught of water, from Calcutta to Allahabad, need never exceed 20 days of 12 hours actual steaming (which period I consider to be still capable of reduction) when the rivers are full, from 1st of July to the 1st of October, and return in 10 days or less.

It is established by information, but not actual experiment, that although some dry seasons are upon record when her voyage to Allahabad would have been arrested by shallows at and above Chunar (such, however, being of common occurrence, and I therefore hold it to be a fair conclusion), that the passage between Bogwangola, at the mouth of the Cossimbazar river, Jellinghee, or any point below, situated on the Ganges, and Allahabad, is open to such vessels as the Hooghly at all seasons; and it must be remembered that on the Mississippi, which has been adduced as a parallel, there is a season of frost and floating ice, when the communication is suspended.

It is established that steamers may navigate the Bhagirattee for four months in the year, and it is said that the Jellinghee will provide perhaps another month or two. 1 July to 30 Oct. June and Nov.

With these premises it cannot be said that the communication is perfect with vessels constructed like the Hooghly, for although it is true that a passage exists through the Sunderbunds, which is always available when the Jellinghee is closed, still some persons well acquainted with that circuitous route will concur with me in opinion that it is in every way better to avoid such passage, both for economy of time and convenience.

During the months of December to the end of June the Hooghly may ply between Bogwangola, Jellinghee or Dacca, and the Upper Provinces, and it becomes necessary to provide other means of conveyance for the treasure, troops or passengers brought to Bogwangola or Jellinghee, to enable them to reach Calcutta, in order to perfect the communication.

This imperfection would of course be remedied by substituting vessels, the draught of which could be capable of reduction to 18 inches on emergency. It is, however, a difficult problem while engines of 50-horse power, the least power that could be applied economically, weigh 50 tons, a weight sufficient to bring down a vessel like the Hooghly, the buoyancy of which is equal to about four tons per inch, of draught 10 inches, and the stock of fuel for which, at 800 mds. (equal to 21 ½ tons), will sink her between five and six inches more; considering the point mathematically, I do not conceive that there would be any impossibility to contrive a form of vessel of the same burthen, and of the self-same resistance in the water, which should draw less than the Hooghly; but there is a limit mathematically, and much more so practically, beyond which this reduction cannot proceed.

Besides that, engines of the form now used require (which is one point in the mathematical improvement which would first suggest itself) a certain depth of vessel.

It is evident that while low-pressure steam-engines are used, the problem of reducing the draft to 18 inches will be difficult, if not impossible, to obtain for vessels carrying any burthen beyond their own fuel and stores, if even this is attained.

The remark, 3d and 4th paragraph of Captain Forbes's note on the description of steamers best adapted to the navigation of the Ganges, in which he suggests the use of a single engine and long cylinder, I consider to be worthy the attention of the Government, in case the manufacturers at home can contrive an engine of the kind which shall economise both weight and fuel. I have been informed that in America it is by no means uncommon to allow the piston rods to work five and six feet above the floor of the deck in river steamers, the upper end of the cylinders being almost even with the decks, or just below. In this way a gain is obtained in the depth of the vessel, also a gain of power by an addition to the length of stroke of the piston.

I am not sufficiently informed to speak more particularly as to the power and construction of the boat engines I allude to, but believe the information to be correct, as it appears to be perfectly

Appendix, No. 25.

(10) Letter from Capt. T. Prinsep; 1 November 1828.

perfectly agreeable to principle that such would be a considerable gain in power, weight and fuel.

I cannot so readily follow the writer of the note in his preference of twin boats, as generally best adapted for the Ganges. There are some objections which strike me as almost insuperable. It is in the first place manifest that a greater weight of material must be employed in the construction of a double vessel of the kind to procure the same buoyancy, also that the resistance cannot thus be reduced below what it would be in a well constructed single vessel of the same burthen. There is also this other objection, which has been suggested by the result of the present expedition, that it will be almost impossible to so unite a double boat that she can be of the same strength as a single one to resist straining when aground in a current of five miles per hour, and her broadside presented to the stream.

A double raft of the kind I humbly consider to be only fit for still water navigation, such as that of the Jellinghee, and perhaps Ganges in the cold weather, and even there I am inclined to question the economy of her draught and burthen.

The Americans of the Mississippi have this advantage in the economical construction of their steam vessels, that the forests from which they procure their timber are up the stream which it is wished to navigate, and their fuel, whether wood or coal, likewise found near its banks. In India the only timber reckoned sufficiently durable is imported by sea, and as yet no appearance of coal has been discovered near the banks of the Ganges. It is not then to be wondered at that in the first instance of the introduction of steam upon the Ganges, the vessels should partake perhaps too much of the nature of sea-going vessels as to their solidity of construction, and not be similar to any model in use upon her waters, and that they should be attended with considerable expense, being constructed with an imported timber and imported engineers, instead of being built in the vicinity of her own forests and with machinery of her own manufacture.

The transport trade and passage of individuals upon the Ganges must, I may safely say, exceed that of the Mississippi a hundred-fold, and is infinitely more tedious, and attended with danger as at present conducted.

Here is, therefore, a field for exertion in improvement of the navigation much beyond any that can be named in America, if it could be possible either by so developing the natural resources of the country, or awakening her industry, as to supply these two essentials to the economy of the undertaking, a native forest near which to construct the vessels, and a convenient source from which to draw her fuel.

I cannot for a moment doubt but that the best form of vessel, as also engine, will soon be contrived to ensure the success of the steam communication, from the energies and intelligence that must soon be directed to the subject, while Government remain the directors and their funds supply the stimulus.

But I fear the time is remote, and perhaps it is absolutely necessary that the way to secure success must be pointed out more clearly before private enterprize or private capital will be directed to the establishment of steam communication on the Ganges as a source of profit, after the example of the Americans.

In the present case, however, the Government expend annually immense sums on the inland transport of their treasure, stores, officers and troops upon the Ganges, and it is not the question whether they should spend the money necessary to establish steam navigation in order to prove its practicability to other adventurers, or to profit by engrossing the whole inland carrying trade to themselves, but rather a question whether a considerable annual expenditure might not be spared, the present risk of loss to themselves alleviated, and the facilities of transport and communication of their own necessary resources increased beyond comparison.

The object is worthy the most attentive consideration and some sacrifice to attain, and from what my own humble observation has led me to judge, I look forward with some confidence to the time when their endeavour will be crowned with every success, both by the discovery of coal in some district adjoining, and economical construction of steam vessels.

I have, &c.

Calcutta,
1 November 1828.

Captain Engineers and Superintendant Canals.

DIARY of the EXPEDITION in the STEAMER HOOGHLY from *Calcutta* to *Allahabad*, in September 1828.

DATE.	Day.	Place Reached.	Distance in Miles	Time under Steam.	REMARKS.
				h. *m.*	
Sept. 8	1	- five miles above Chogdah.	47	10 15	- - averaging $4\frac{1}{2}$ miles per hour. The channel broad and known, and a flood-tide in our favour for part of the day.
— 9	2	below Meertulla	41	12 37	- - average $3\frac{3}{4}$ per hour. Enter the Bhagirattee or Moorshedabad river at 4 *h.* 4 *m.* P. M.
— 10	3	Plassey - -	48	12 45	- - averaging $3\frac{7}{10}$ per hour. First part of this day's route exceedingly winding; also subject to great change.
— 11	4	Balanagur -	49	13 —	- - averaging $3\frac{7}{10}$ per hour. Pass Berhampoor at 1 P. M. The two sharp turns above Moorshedabad present a rapid current, creating some delay.
— 12	5	- - two miles in Great River.	49	11 20	- - averaging $4\frac{3}{10}$ per hour. The current of the Bhagirattee evidently decreased; our vessel light, from consumption of its fuel. The last hour and half employed upon the two miles after entering the Great River, struggling against the strength of the current.
— 13	6	Rajmahal - -	28	10 12	- - averaging $2\frac{6}{10}$ per hour. Some loss from want of pilot. The vessel light, and speed full eight miles per hour. The current, therefore, making allowances, must have equalled five miles; average extreme, seven miles per hour.
— 14	7	- - -	10	3 25	- - average $2\frac{9}{10}$. Started heavy with fuel; some difficulty about rudder, no pilot. The river here divided into two branches; our route lay on the shelving side of the least rapid, by report.
— 15	8	Terria-gullee -	26	9 55	- - averaging $2\frac{6}{10}$. Great difficulty of steering during the first part of the day while in the Broad River. The Terria-gullee passage, although somewhat shoal, is every way advantageous.
— 16	9	beyond Colgong -	39	11 24	- - average $3\frac{6}{10}$. The channel from Terria-gullee to Paturghatta not the main stream, which is here much divided The rapidity of the current even at the rocks passed, could not have exceeded seven miles per hour.
— 17	10	- - Sands, midway between Tenanguira and Monghir.	31	10 37	- - average $2\frac{9}{10}$. Pass through the Bogilpoor Creek and encounter some difficulty in its mouth; no pilot; another creek brings us to Tenanguira, where we encountered perhaps the most rapid current. The last $3\frac{1}{2}$ hours we progressed only eight miles, advancing on the shoal side of the river.
— 18	11	Derriapoor Creek	43	12 10	- - averaging $3\frac{4}{10}$. Above Monghir the current somewhat abated, but sands somewhat intricate; no pilot. Follow a side channel from Russoolpoor to Surajegur, also from thence to anchorage in Derriapoor Creek, which accounts for our rate being large.
— 19	12	- - Gungara, eight miles from Bar.	17	7 20	- - average $2\frac{3}{10}$ from Derriapoor to Bar. Currents are very rapid and the river narrow. The passage hence to Bar somewhat difficult. Easterly winds. River on the rise.
— 20	13	- - Bankerpoor Creek, Patna 20th night to 22d morning.	44	12 —	- - averaging $3\frac{6}{10}$. A good pilot procured at Bar. The river much divided hence to Patna. The currents found rapid only below Patna before the Fulwa island; they are slack before the city and a spit of sand is forming. Easterly gales.
— 22	14	Chupra Churs -	$29\frac{1}{2}$	10 30	- - averaging $2\frac{7}{10}$. Strong currents between Patna and Danapoor, also from Cheeran to our anchorage in the middle of a difficult passage, between sand islands.
— 23	15	Khoaspoor -	$17\frac{1}{2}$	6 42	- - averaging $2\frac{6}{10}$. Pass the mouth of the Gogra, where the currents are rapid; then feel the right bank channel; narrow but deep. On our returning we followed the left bank, and experienced much difficulty.
— 24	16	- - below Bhulleea, mouth of Surjoo River.	$33\frac{1}{2}$	12 7	- - average $2\frac{7}{10}$. The banks annually suffering, but the channel favourable to navigation. The mouth of Surjoo, in Colebrooke's charts east of Bhulleea, is now west, having altered full three miles.
		Carried forward -	$552\frac{1}{2}$	116 19	

(10.) Letter from Capt. T. Prinsep; 1 November 1828.

DATE.	Day.	Place Reached.	Distance in Miles.	Time under Steam.	REMARKS.
				h. m.	
		Brought forward -	$552\frac{1}{2}$	166 19	
Sept. 25	17	Ghazeepore -	47	13 17	- - average $3\frac{5}{10}$! Pass Buxar at noon, at Burpoor enter the Ghaspoor Creek.
– 26	18	below Sardpoor -	36	11 30	- - averaging $3\frac{1}{10}$. Course entirely in the main river; one lofty bank universally of hard red clay alternating with kunkur; currents abated.
– 27	19	Benares - -	29	8 50	- - averaging $3\frac{3}{10}$. Course in main stream; extreme current between five and six miles per hour; westerly wind.
– 28	20	below Kulchera -	$31\frac{1}{2}$	10 35	- - averaging 3. Pass Chunar, where the channel is narrow and breaks against a promontory with some force. Winds strong from the west.
– 29	21	Phoolwareea -	45	12 –	- - averaging $3\frac{7}{10}$. Course in main stream; current much abated.
– 30	22	Deeha - -	48	13 12	- - averaging $3\frac{6}{10}$. Current generally abated; the two turns of Sursa and Dum Dumma; except in the latter, we could barely stem the current in the middle of the bend; our speed about $7\frac{3}{4}$ per hour.
– 31	23	Allahabad -	10	3 17	- - averaging 3. Currents slack; delay in the Lawayn reach.
		TOTAL - - -	799	239 –	or, general average $3\frac{34}{100}$ miles per hour.

(signed) *Thomas Prinsep.*

ABSTRACT STATEMENT of the RETURN VOYAGE of the HOOGHLY from *Allahabad* to *Calcutta.*

PLACE REACHED.	Miles.	Hs. Ms.	REMARKS.
Allahabad to Chunar	115	20 33	- - averaging $5\frac{12}{100}$ miles per hour. Delay at every crossing place. Aground for 12 hours below Allahabad.
Chunar to Benares -	22	3 22	averaging $6\frac{7}{10}$ per hour.
Benares to Ghazeepore	68	9 48	averaging $6\frac{9}{10}$ per hour.
To Patna Deega -	124	21 25	averaging $5\frac{8}{10}$ per hour.
To Monghir - -	97	22 15	- - averaging $4\frac{4}{10}$. Much delay before Patna, Bar, Derriapoor, and from Surajegur to Monghir.
To Colgong - -	62	11 12	- - averaging $5\frac{1}{2}$. Delay in the Seeta Coon reach, also before Bogilpoor.
Rajmahal - -	62	7 45	averaging 8 per hour.
To Choka Mouth -	32	5 15	averaging $6\frac{6}{10}$ per hour.
Through Bhagirattee and to Calcutta.	232	25 40	averaging 9 per hour.
TOTAL - - -	814	127 15	general average $6\frac{4}{10}$ per hour.

(11.) Letter from Capt E Smith to H T Prinsep, Esq.; 2 November 1828.

(11.)—LETTER from Captain *Edward Smith*, Engineer, *Allahabad*, to *H. T. Prinsep*, Esq., Secretary to *Bengal* Government, dated 2d November 1828.

Sir,

SINCE the receipt of your letter of the 7th August, apprising me of the dispatch of the steam vessel Hooghly to Allahabad, and requiring my possessing myself of the information necessary to determine on the practibility of extending her experimental voyage above Allahabad, my attention has been directed to an examination of the part of the Ganges in question, and to a consideration of the facts bearing upon steam navigation, in the parts of the river with which I am acquainted, as well as to the points more generally connected with the navigation of the rivers of the Upper Provinces, to which your letter adverts.

2. The result of my observations I have now the honour of submitting, for the consideration of the Right honourable the Governor-general in Council, begging permission to premise the reports, by stating that it has occurred to me, that his Lordship's orders would be most readily attended to by my forwarding a report, grounded on the information that my situation at Allahabad and employment on the Jumna has allowed my acquiring, with such as the necessarily hurried researches consequent upon the call upon me has allowed of my obtaining. An immediate report will carry with it, at least, such notice of the subject, as, should the perusal of it induce his Lordship to direct the duty to be continued or extended, will

will permit of the selection of such lines of inquiry as it may be deemed judicious to pursue. This course appears to me preferable to late and lengthened reports on designs, which cursory notice even may show to be so little promising, as to render further investigation of no service.

3. Such part of the report as regards the passage of the Hooghly from below the Fort of Allahabad to above Phapamow, may be shortly dismissed. From the latter end of August to the end of September, a series of measurements satisfied me, that this distance had in every part a depth of channel of from 12 to 20 feet of water, with an average stream rarely amounting to four miles an hour; and on one single occasion, and at one spot only, increasing to seven; and as the survey was made after the fall of the river from its greatest annual rise, there remains no doubt of the Ganges, from the confluence of the river to above Phapamow, being easily practicable for steam navigation, from the early part of July to the middle or end of September. The Hooghly, however, did not arrive till the 1st of November, at which date the final fall of the river had been proceeding for 10 days, at the rate nearly of a foot a day; and there being only nine feet water in the channels, where a short time before 15 had been found, I requested Captain Johnston to forego the attempt for ascending beyond the Fort; not that the passage was closed, but that the river continuing to fall rapidly, I considered it injudicious, without an adequate object, to commit the vessel among shoals, whence, at that late season, in case of grounding, it might have been difficult to extricate her. Had she arrived one week earlier, I should have had no hesitation in assuring Captain Johnston of a safe and easy channel.

4. An erroneous impression seems generally to prevail of the difficulty and danger of this part of the river; some idea of a permanent rapid, equally laborious to surmount in the rains as at other seasons of the year. The obstacles, however, such as they exist, are of a different kind, and in no degree affecting the navigation during the months that the river is high; but on its fall, obstructions to the passage of large boats, even as early as November, are certainly experienced. Their nature I can describe, but their causes, and consequently the possibility of removing them, can, in the present dearth of data, be but surmised, or if given, it can be only on analogy.

5. The difficulty of navigating the Ganges from the Fort to Phapamow extends, though in a less degree, throughout the remainder of its course upwards; and it is, I believe, from boats coming from Bengal first encountering the shoals of the single instead of the deeper channel of the united rivers at this particular spot, that it has obtained so formidable a notoriety. What really is the case may easily be supposed: the Ganges above its confluence with the Jumna is a stream of shoals and rapids, which in a measure disappear when it has received an additional supply of water from the latter river.

6. Of the difficulty of passing the Ganges in the first six miles above the Fort, the causes I fear are such as will not warrant my holding out strong expectations of their removal. The principal obstruction is felt at the junction of the rivers, where the large body of sand and earthy matter brought down by the current, particularly of the Ganges, is deposited near the eddies and backwater, is again suspended by the streams, as the rivers, rising and falling as they are constantly doing in different levels, alternately disturb each other, and again deposited in new situations; thus forming at the entrance to the Ganges, from the united rivers, a shallow and continually shifting bar. From its confluence upwards the Ganges runs between banks, more widely separated than below; here, three miles apart, through this expanse of sand, the diminished stream of the dry season winds its way with strong current, but neither deep nor settled channel; the waste of sand bank presenting less resistance to the lateral cutting of the river, than the bottom does to its deepening the channel. A substratum of konkur in clay, probably checks the action of the water in deepening its bed; it is scarcely however discernible, the bottom of the channel having usually a layer of rolling sand.

7. The preceding account will be found not so much that of a river having its navigation impeded by rapids of defined extent, as of one generally of tedious and laborious navigation; but as sketches, however rough, will be of more avail in elucidation than further written description, I have added the marginal drawing of the river, in its several states, exhibiting its changes by references.

* * * *

*REFERENCES:—Supposed state of the river in November of any year, the broader stream being the navigable channel.

The change which may take place by February, the channel of November having become shoal, and a new line opened by the current.

8. In the above sketch and sections will be seen a sufficient explanation of the obstacles to the employment of paddle and barrel-boats, arising from the shallowness and changing of the channel, which would often leave dry the paddle-boats, moored two or three months previously in deep water, rendering at least an annual shifting of the moorings necessary. The aid of the paddle-boats may, from this shoalness of water, be of reduced utility as to obtaining the requisite depth of water. Boats are obliged to keep so near the steeper bank, as to be enabled to employ their goonds or two-ropes, the power applied to which in the crew, is sufficient to carry the boat over the stream, except on particular occasions and in certain parts, in which again increased rapidity of current is accompanied by diminished depth of water and variableness of channel: the objections to the paddle-boats becoming the stronger at the spots in which, otherwise, their employment might be beneficial.

9. A question will naturally arise of how far it is practicable, to confine the dry-season channel to the same line, year after year, which effected, the chief objection to the employment of paddle-boats would be obviated. Much encouragement to attempt works for the

Appendix, No. 25.

(11.) Letter from Capt. E. Smith; 2 November 1828.

accomplishment of this end, is not to be found in the nature of the river; that is, where no fixed point exists to regulate the line of channel of two or three hundred yards wide; and when it runs in an expanse of two or three miles in breadth of sand bank, and to prevent its changing its passage, through any part of which no natural obstacle is to be discovered. Still something may be attempted, but only on the observations of several seasons, grounded on accurate plans, proving that the stream has an inclination to certain lines, to retain its current and line of navigation in one of which, must be the highest effort aimed at; the power of such a river in opening its channel may perhaps be guided, but cannot be controlled or opposed, with the most distant hope of success.

10. My observations regarding a canal cannot but be brief: were the plain of the Doab less elevated than it is, a lateral cut would be very desirable, but with rivers rising at the periodical rains upwards of 40 feet, taking every advantage of ravines, a depth of cutting of 50 or 60 feet on a length of about three miles is unavoidable; a scale of work involving an expenditure of from 10 to 12 lacs of rupees, a sum which the trade now on the river could not repay. The total absence of superficial waters on the Lower Doab precludes the adoption of the more economical form of lock canal.

11. Much faith has, I believe, been placed in the feasibility of a canal, from the belief in the existence of an unfinished native work of the kind, and the circumstance of the irrigation canals of the natives in the Upper Doab having been traced with a judgment creating confidence in the success of their other attempts in similar works: that adverted to, however, I have long since examined, and found it unfortunately with every mark of an entrenchment cutting off the point and protecting the open city and suburbs of Allahabad from predatory attacks, but with none whatever of a canal.

12. If the work be ever resolved on, the sole method of preventing the rise of the expense above a very large amount will be that of making the canal perfect itself by its own waters, by taking advantage of the difference of level between the Ganges and Jumna, and by introducing water at periods when the great fall through the canal, aided by simple dredging machinery, will of itself effect the excavation. Even this process, from the works necessary to guard the head of the canal on the Ganges, must be expensive and slow, and conducted with much caution.

13. Before determining on the execution of works at any particular point on the river, it may be no more than prudent to ascertain its general character for navigation; if of equal difficulty throughout, the improvement of six miles would be of little service, when hundreds remain in the original state; while the removal of a bar to navigation, or a difficulty at a particular point, checking navigation throughout the course, would be of the highest service. To obtain the requisite knowledge on this head would cost little trouble. Registers of boats established at the Fort Point, at Allahabad, at Phapamow, and at a station some distance up the river, Betoura Ghaut perhaps, near Futtehpore, by giving the relative time of passage over the intervening space, will afford the surest information of the comparative facility of navigation, with the addition of accurate returns of the trade on the river, the value of which must materially influence a decision on the nature and expense of any works contemplated for improving the navigation.

14. Though in the present varying channels near Phapamow paddle-boats are not applicable with advantage, there are passages in the Ganges, below Allahabad in particular, where the casual observations made in a voyage up the river, confirmed however by accounts commonly received as correct, incline me to think the use of such aids to boats would be productive of much benefit. Between Allahabad and Mirzapore are projecting portions of the main bank, round which, with deep water, the stream rushes with great velocity; the necessity of tracking often brings boats within the influence of the strongest rush of water, with its attendant inconveniences, of the employment of large numbers of men, the breaking of tow-ropes, delay, and at times loss of property; whereas the paddle-boat would supply the requisite power of ascending along the less impetuous portion of the stream. Whether Government would derive compensation for the outlay from the levy of a consideration for the aid of paddle-boats must be doubtful, particularly where a long train is required; but the experiment at points such as I have sketched requiring the establishment of one or two only, cannot be a costly one. Few sources of any but vague information regarding the American rivers are, I regret, open to my search, as a perfect acquaintance with the fruits of European enterprize and experience displayed on so ample a field would tend greatly to the establishment of a sound foundation for essays on the improvement of the rivers of Bengal, though their character is, I imagine, too tropical to be susceptible of the same improvement from art as those of North America.

15. Nothing which the preceding sheets contain has a very intimate connexion with the general question of steam navigation; but should the voyage of the Hooghly terminate in favour of the future employment of Government steam vessels, the extension of the voyage to Cawnpore, during at least the rainy season, may well be allowed to enter into the estimate of advantages. With but the slender acquaintance of a few days with the powers of steam vessels, I have, from my professional avocations on the Jumna, necessarily a considerable one with the common course of navigation of that stream, and of the Ganges, and do not consider that Allahabad is to be considered the limit of steam navigation on either of the rivers, when the system shall be rendered more complete by the adoption of the ready and not expensive means of combining safety with increased expedition which even now suggest themselves.

16. This report, I hope, will be found to comprise the desired notice of the points mentioned in the letter of my instructions, in so far at least as may be required for fixing on the subjects of my further report, should such be deemed desirable.

I have, &c.

Allahabad, 2 Nov. 1828. (signed) *E. Smith*, Captain Engineers.

Appendix, No. 25.

Steam Communication with India, and on the Rivers of India.

(12.)—LETTER, from Captain *W. Warden*, of the East India Company's Marine, to the Marine Board at *Bengal*, dated 23d May, 1829.

Gentlemen,

ON the 13th instant I had the satisfaction of reporting to you my safe return to Calcutta with the Honourable Company's steam vessel, Hooghly, from her second experimental voyage; I have now the honour of submitting to you a circumstantial report of the transactions of the voyage, with such remarks as I hope will prove useful in facilitating steam navigation at this season of the year.

Agreeably to the instructions of the Board, bearing date the 13th of March 1829, I left Calcutta with the Honourable Company's steam vessel, Hooghly, on the 17th March, fully equipped for this voyage, having on board 500 maunds of coal in our boxes, and about 22 tons weight of provisions, wood, fresh water, passengers, baggage and freight, a list of which I have annexed hereto. With these articles on board the Hooghly drew four feet three inches forward, and three feet six inches aft. In this trim I did not find her more unmanageable than when at the lightest draught at which I was able to get her during the voyage, which was four feet one inch forward and three feet three inches aft, and but two revolutions less of her paddle-wheels.

On the 9th March I reached Bissuntpore, the first coal depôt, which I would recommend being discontinued, as its distance from Calcutta is too short, and occasions unnecessary delay; also as it obliges steam vessels to leave the lower Sunderbund route and pursue a middle course by way of Munick Khall, Goodlad's Creek and the Chandcolly, through which the Hooghly came with some advantage, as the tides were in her favour; yet I would by no means recommend this route being in general adopted, as Manick Khall and Goodlad's Creek are only flood passages, and may occasion a detention in waiting for tides, independent of the difficulty there is in getting through Goodlad's Creek, which is so narrow that it is quite impossible for a steam vessel of the Hooghly's size to steam through it without touching the banks on both sides of the creek, which the Hooghly did several times. The Chandcolly, though there is deep water through it, is so very narrow and circuitous that it is not a safe passage for a steam vessel; in this creek, I regret to state, we lost our gig; she was torn from the stern davits by the projecting branches of a large tree, in sounding one of the narrow sharp turnings.

For these reasons I would recommend in future the lower Sunderbund route being adopted; though the distance is greater, I am of opinion it may be run in nearly the same space of time as the Hooghly took in reaching Koolna by the way of Goodlad's Creek. On the 20th March I reached Koolna, our second coal depôt, which is extremely well adapted for the first depôt from Calcutta, as a steam vessel leaving Calcutta with 500 maunds of coal on board, would, I consider, have 100 maunds remaining on board on her arrival at Koolna, even though she came by the lower route. It is also convenient for getting the coals off, as a steam vessel can haul close alongside the bank for that purpose; I also found, from having been steaming so long in salt water, it became necessary to clean the boilers, &c., I was therefore obliged to wait here, even though it had not been a depôt; but as it is, all purposes are answered by this one stoppage. On the 21st of March I again proceeded on my voyage. In passing through the Modomutty, a remarkably broad and deep river, offering in itself no impediment to the navigation of vessels of any description, I found it in four different places, from Momutpore downwards, strongly staked with fishing stakes completely across the river, leaving only a small boat passage of about 20 feet wide, in passing through which the Hooghly's paddle-wheels were greatly endangered. This is not the only objection; these stakes are of so strong a description and so thickly placed that they impede the free course of the current, and cause sands to accumulate on them, in passing through one line by which, I found only nine feet water; and below the lower line of stakes, an immense sand has accumulated, such as I did not find in other parts of this river, and could only account for by the water's course being impeded. I would therefore, for the improvement of this navigation, strongly recommend their entire removal.

On the 23d of March I reached Comercolly, our third depôt, which, though rather a long stage from Rajmahal, is perhaps the best that could have been selected, from its conveniences in getting the coal off; our averaged rate of steaming from Calcutta to this place was five miles and three quarters per hour; I was only detained at Comercolly three hours and forty minutes, and left again the same day, and entered the Ganges at Koosthea.

The Sunderbunds are particularly adapted to steam navigation; in fact they offer no impediment, it is scarcely even necessary to slow or stop the engines for a minute, and after a little practice may be navigated by the charts alone, even without a pilot; but this I would not at present recommend, as it requires some little practice to become acquainted with its intricacies. I would here beg leave to offer a few remarks, which may prove useful in this navigation: steam vessels should by no means enter any of the small creeks towards night, as it is unsafe steaming through them after dark, and equally dangerous anchoring in them, from the liability there is of large wood boats and others falling on board; these vessels are of a very large description, and draw as much or more water than the Hooghly does, and are so deeply laden that they are scarcely manageable, but drift down as the tides carry them. They go at all times when the tides answer, and any of these falling on board a steam vessel in a spring-tide, which I found to run from three to four miles an hour, would cause serious injury; I would therefore strongly recommend one of the large creeks or rivers always being selected for anchoring in at night; and then not in the centre of the channel.

In

(12.) Letter from Capt. W. Warden, to Marine Board; 23 May 1829.

In my progress through the Sunderbunds I found the paddle-wheels frequently endangered by the projection of large stumps and roots of trees from the banks, and once from a large wood boat falling on board of us. To prevent as much as possible accidents to the wheels, I would beg to be permitted to suggest that an iron guard rail should be fitted for their protection, which I should imagine might be accomplished at a very trifling expense, or little detriment to the vessel's speed, by securing strong carved bars of iron to the beams on which the paddle-shaft rests, and to the vessel's side below the wheels, as shown in Fig. 2; but on this subject I shall not presume to say more, but leave it to the decision of professional men. It will not only be useful in the navigation of the Sunderbunds, but I should think in the Hooghly and Ganges likewise, and would prevent the possibility of boats, when coming alongside, getting under the wheels, which there is always great danger of, even when at anchor, in a strong tides'-way.

Fig. 1.

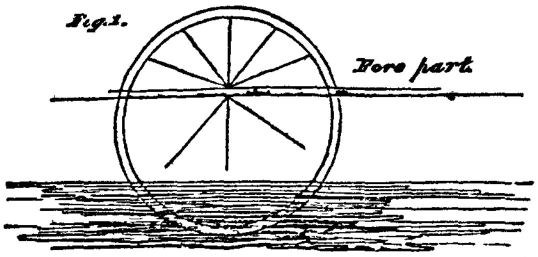

Fig. 2.

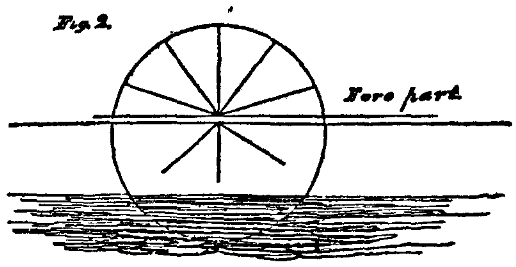

I would likewise beg to suggest that steam vessels in this navigation should be provided with iron quarter davits to hoist their light boats to; had the Hooghly's boat been hanging at a quarter davits instead of a stern one, the accident that occurred to her would not have happened.

I hope my estimated distances may be found correct between Koolna and Monghyr, as between these places I had not complete charts; I was consequently obliged to get my distances from different authorities.

Soon after I entered the Ganges I fell in with the strong westerly winds that usually prevail at this season of the year, which impeded my progress very considerably, as it generally blew nearly a gale of wind the greatest part of the day; but steaming head to wind, I do not think the poop impeded the vessel's progress in a much greater degree than a common awning would have done.

On my arrival at Monghyr I overtook all our coal boats, I was consequently obliged to fill our boxes, which brought the Hooghly down to 4. 4. forward, and 3. 8. aft. After leaving Monghyr in passing from Dulollpore, as far as Rajowlee Ghaut, on the opposite side of the river to Bar, the river has taken a new course, and there are many very large stumps of trees remaining in the centre of the channels, some of them but a few inches under water, which are extremely dangerous, not only to steam vessels, but to all descriptions of boats passing this way.

On the 31st of March, in passing between sand banks a little above Surajegur, was the only opportunity I had on my voyage of proving the efficacy of the new rudder. The current was irregular, but did not in rapidity exceed five knots, which, though considerably less than its rate in the rains, yet even in this I found it insufficient to command the vessel, and we grounded in consequence; I can therefore with confidence report that it will not be sufficient to command the vessel in strong currents in the rains. I had likewise an opportunity of proving its effect when coming suddenly in contact with a sand, in this respect the invention is quite successful.

A little above Buxar, at full power, we struck upon a knowl of sand in a few inches less water than our own draught. The rudder, when it came in contact with the sand, rose of itself, and when clear of the sand fell again without sustaining any injury; had our rudder in this instance been a fixture, or only to have been got up by tackles, I have no doubt it would have been torn from the stern frame.

The only improvement that occurs to my mind as likely to remedy the defect in the steerage of the Hooghly is by lengthening the sternpost, and thereby carrying the rudder further beyond the dead water in her run; a rudder on each quarter might answer, but I should imagine it would be very expensive fitting them, and they would be very much exposed to injury in touching the bank, or in making stern-boards, which is frequently necessary.

On the second April I reached Dinapore, where I met considerable detention from having to communicate with the civil authorities which reside at Patna, which is about seven miles off; I would therefore beg leave to suggest that on future occasions the necessary references should be made to some of the authorities resident at Dinapore.

After leaving Dinapore I met with such extreme difficulty from the ignorance of our pilot, that I found it impossible to proceed at full power, therefore, to prevent the unnecessary expenditure of fuel, I directed one boiler only to be used, and applied to Mr. Pringle at Chapra, from whom on the following day I got the most clever pilot I had hitherto met with; and though the preceding day I had only been able to make eight miles, yet the following, with the assistance of this man, I steamed 54 miles, which circumstance I mention to prove that the principal difficulty in this navigation is the want of good pilots.

On the 6th April I reached Ghazeepore, and took in a further supply of coal, and on the 7th started again. I consider the navigation between this and Benares the most, and in fact the only, dangerous part of the Ganges, from the shoals of konka rocks that lie off Kytee, where the soundings are very irregular, and the channels very narrow. A steam vessel ought to pass this part of the river with the greatest caution, for if she struck at full

Appendix, No. 25.

Steam Communication with India, and on the Rivers of India.

power on any of these shoals, the consequence would be of a very serious nature, and in all probability the loss of the vessel.

On the 8th I reached Benares, and after taking in 100 maunds of coal, I left it again on the 9th, drawing only 4. 1. forward, and 3. 3. aft. The same day I passed Chuner, and arrived off Kutchwa in the evening at 5. 30. P. M., where I found my further progress impeded by a shoal extending completely across the river. I accordingly anchored the Hooghly in a safe anchorage, and proceeded with the boats to sound this shoal, and after a thorough investigation I found there was not more than 2. 6. water across it in any part. I remained here examining this place until 11 A. M. on the following day, when having satisfied myself that there was not sufficient water for the Hooghly, and that the river was fordable in the abovementioned depth from Chunka over to Burrainee, I gave up the attempt.

On my arrival at Kutchwa I found three native boats aground on this shoal, two out of which had to unload their cargoes on the sand ere they could get over it; and during the time I was sounding it a great many native boats passed both up and down, every one of which came by this place, and those that exceeded in draught two feet water, grounded. I am induced to mention this circumstance to show that this was the only channel left open at this season of the year. At this place the current was one mile per hour, at Dinapore about two, and off Surajegur five knots only for a short distance, and at the lower parts of the Ganges two and a half miles per hour.

I can with confidence report that, unless great alterations take place, which, from the instability I have found in this river, I consider very likely, Chunar is the highest station at which a steam vessel can be got up to at this season of the year.

I have annexed hereto a table, showing the dates of my arrival and departure at the several stations, likewise the quantity of coal taken at each and what left.

I found all our coal depôts well chosen and conveniently situated on the Ganges. After passing Saulpore on the Ganges, and as far as Benares, our averaged rate of steaming was three and a half miles per hour, and our expenditure of coal from Calcutta to Benares is 1,950 maunds, 250 maunds of wood.

On the 27th April I again left Benares on my return to Calcutta, when I adopted Captain Johnston's plan of using a stern anchor, for which purpose I found our kedge anchor answer. I likewise found one boiler quite sufficient, and even with this was seldom able to go full power for any length of time together.

On my way down it generally blew quite a gale of wind during the middle of the day, which, though generally a fair wind, impeded our progress as much as though it had been a head wind, and frequently rendered the vessel almost unmanageable. On these occasions I found the poop to affect her steerage in some degree, rendering it frequently necessary to keep the jib upon her to counteract its effect: notwithstanding this objection I consider the advantages of the poop greater in the accommodation gained by it than the objections to it.

The navigation of the Ganges at this season of the year must always be attended with some difficulty and detention to steam vessels, from the extreme shoalness of the river, as in several parts thereof, even in the best channels, there was not more than four and five feet water; the current at this season offers but little or no impediment, as I did not find it exceed two miles and a half per hour below Dinapore, except at Surajegur, and there only for a short distance; between the sands the current was five knots, and above Dinapore only one mile per hour.

Though this navigation presents many difficulties, I do not by any means consider it dangerous at this season, except between Ghazeepore and Benares, in passing between which places the greatest caution will be necessary.

In fact, the strictest attention to the management of the vessel, the engineer, and the appearance of the water ahead, will at all times be necessary.

I have previously mentioned the difficulties and detention I met with from the ignorance of our pilots, which is the chief obstacle in this river; and it can never be navigated to advantage by steam vessels without an efficient establishment of this class of men.

During my detention at Benares I was enabled to make some temporary arrangements for the establishment of pilots at the most intricate parts of the river, which, though but imperfectly carried into effect, was of great advantage to me on my return voyage. I would therefore beg leave to submit the same, which may prove useful in permanently establishing pilots for this river, which for a time, until its channels are perfectly known, will be necessary for the Government to support: from Calcutta to Koolna two pilots; from Koolna to Saulpore, on the Ganges, two more. I should not suppose that it would be necessary to allow boats for these pilots, as the difficulties are but few, and the channels, I should imagine, do not alter much.

2 pilots and boats from Saulpore to Bagwangollan.
1 pilot and boat from Bagwangollan to Mohengunge.
2 pilots from Mohengunge to Rajmahal.
2 ditto from Rajmahal to Cora Golah.
2 ditto from Cora Golah to Boglepore.
2 ditto from Boglpore to Monghyr.
2 ditto from Monghyr to Bar or Rajewallee Ghaut.
2 ditto from Bar to Dinapore.
2 ditto from Dinapore to Ravelgunge.
2 ditto from Ravelgunge to Bhaulea.
2 ditto from Bhaulea to Ghazeepore.

2 pilots

(12.) Letter from Capt. W. Warden, to Marine Board; 23 May 1829.

2 pilots from Ghazeepore to Kyte.
2 ditto from Kyte to Benares.
2 ditto from Benares to Chunar.
2 ditto from Chunar to Mirzapore.
1 pilot from Mirzapore to Poolwarreea.
1 ditto from Pulwarreea to Sursa.
1 ditto from Sursa to Allahabad.

The above pilot stations are not all of equal distances, but chosen according to the difficulties and intricacies of the respective places.

I would also beg leave to suggest that, independent of these native pilots, there should be at least three European officers to superintend them, who should be allowed fast-pulling covered boats, to be constantly pulling about, and see that the above pilots are on the alert, without which I am afraid the object of this establishment would be but very imperfectly accomplished.

I would likewise beg leave to recommend that the description of men known by the name of Jaulpulwarreahs should be engaged as pilots for the river, as they have a better knowledge of it than any other class of men I have met with, and from the inquiries I made I am induced to believe they would be satisfied with the pay of Lascars.

On my return voyage our averaged rate of steaming on the Ganges, with one boiler, was very nearly five miles per hour, and through the Sunderbunds, with both boilers, six miles and three quarters; and the expenditure of coal from Benares to Calcutta 900 maunds. I regret to state, that notwithstanding I took every possible precaution of slowing, and often entirely stopping the engines, and sending our boats sounding whenever we suddenly shoaled our water, or when the channel was not clearly understood, we grounded frequently three or four times a day, from the extreme shoalness of the river, in many parts whereof there was not more than four or five feet water in its deepest channels. The river, when I left Benares, was at its very lowest ebb, and by the time I reached Rajmahal it had begun to rise in a trifling degree; however, the principal cause of our grounding was the extreme ignorance of the men who came as pilots. We have seldom run aground at full power, and generally came off without any great detention, except on one occasion. On the 27th of April, the day on which I left Benares, we grounded, going quite slow, on the spit of a sand, a little above Thanapore, though our boat, with a pilot in her, was going ahead. We remained aground six hours, though by no means in a dangerous situation, as there was the same depth of water all round the vessel, her head very nearly on with the current, which was only one mile per hour.

On the 4th of May, a few miles above the Janquire rock, we grounded on a sand, but did not remain long, and in swinging off bent the pintle of the rudder, but not so much as to render it in any manner unserviceable. I remarked, that whenever we grounded, we usually hung more in midships than in any other part, though I could not perceive the vessel to have fallen any thing. Some of the butt-ends seemed to have worked a little, but so triflingly, that I think it may have been occasioned by the extreme heat and dryness of the atmosphere; for while at Benares, we found it shrunk all the casing and split the pannels of the cabin doors. The engineers also stated, that when going at full power, the engines worked, though I could not perceive it, more than heretofore.

I would beg to suggest, that on a future voyage, at this season of the year, the poop should have a double roof, the lower one of which might be of the lightest description, even half an inch I should think would be sufficient for the lower roof, with a space of about four or six inches between the two decks. The thermometer under the poop deck was generally 104 during the greatest part of the day, and the cabin, from the poop having but one thin deck, so excessively hot it was scarcely possible to remain in it.

I would likewise recommend the bulk-head of the cabin being brought one beam further forward, and divided by a shifting partition into two cabins.

I am now employed in filling in, on Captain Prinsep's charts, the various sands, as I found them in the dry season, which shall be forwarded as early as possible.

Calcutta, 23 May 1829.

I am, &c.

(signed) *C. B. Green*, Secretary.

(13.)—LETTER from Captain *James H. Johnston* to *G. B. Greenlaw*, Esq., Secretary to the Marine Board at *Bengal*, dated 30th April 1829.

(13) Letter from Capt J. H. Johnston to Secretary to Bengal Marine Board; 30 April 1829.

Sir,

I AM desired to report to the Marine Board, for the information of Government, the result of some further experiments on towing vessels, with the Berhampooter, which were made by order of the Right honourable the Governor-general on the 28th and 29th instant.

The experiment on the 28th was directed principally to ascertain the correctness of the results apparent on the trial of the 20th, which were on this occasion confirmed in every way; and I have only to remark that the speed was decreased half a mile per hour by taking the Soonamooky alongside instead of towing her astern; this was a consequence to be expected.

On the 29th the Berhampooter took three vessels in tow, in the following order. The Soonamooky went astern a budgerow of 16 oars and a pinnace of 12: the vessels were brought as close to each other as their bowsprits would allow, but were still too much apart; and it is very desirable that boats intended to be towed should be deprived of every superfluity of bow, so as to admit of their coming in close contact with their leading vessel's stern.

At 6. 25. the Berhampooter set on her steam with her head up the river, (the last of the ebb still running); midway between the Governor-general's and Chandpaul's Ghaut the vessels turn round, and the evolution was performed in little more space than if the Berhampooter had been alone. At 6. 32. with slack water, the four vessels passed the Governor-general's Ghaut; the engines worked to 27 strokes, and the speed by log was 4 ¾. At 7. 11. when the flood-tide had made, and with a fresh southerly wind, the vessels came abreast Sir Charles Metcalfe's house; and at 8. 10. they were abreast the creek at Rage Gunge, when the pinnace was east. The engines had been working to 30 strokes, and the speed by log had been 5 ¾ on an average, from which, deducting one-seventh for the wash of the paddles, five miles will remain for the true rate nearly; and admitting the true speed of the Berhampooter, without a tow, to be 6 ¼ miles, a diminution of 1 ¼ mile, or one-fifth of the speed, will appear to have been occasioned by towing these three vessels.

With the Soonamooky in tow on the preceding day, the distance between Sir Charles Metcalfe's and Rage Gunge had been performed in 43 minutes: this day, with three vessels in tow, it occupied an excess of 16 minutes, or a little less than two-fifths of the whole time with the Soonamooky in tow. The speed was on the former occasion calculated to be diminished about one-twelfth; with the three vessels it appears by log to have been diminished a little more than one-fifth, and on the time 43 minutes. This difference of speed should have made a difference of 11 ½ minutes only, whereas 16 minutes are exhibited, and this must be accounted for by stronger tides, or the fallacy in measuring the rate by log; but supposing each vessel to have diminished the speed to the same extent as the Soonamooky, then would the three vessels have caused a difference of three-twelfths, or one-fourth of the whole speed, and the true velocity would have been 4 ¾, which is perhaps a near approximation to the truth.

Appendix, No. 25.

(13.) Letter from Capt. J. H. Johnston to Secretary to Marine Board; 30 April 1829.

Some time was occupied at Rage Gunge in ascertaining the rate of the tide, which at this particular place appeared to have great strength, and was found to be running 2 ½ miles per hour.

At 8. 59. the three vessels proceeded to the jar makers. The wind had increased very much, and the engines fell to 28 and 29 strokes. The speed by log increased from one-eighth to one-fourth of a mile, and the vessels reached the jar makers at 10. 4. or in an hour and five minutes, from Rage Gunge, exceeding by 27 minutes, or one-third, the time occupied by the Berhampooter in running the same distance on the preceding day, when without a tow and with much less opposing wind. The three vessels then returned to the Governor-general's Ghaut, with wind and tide, in one hour and 22 minutes.

The experiment has had a satisfactory result in demonstrating the facility with which a long line of vessels may be towed, where the navigation is not very tortuous; but where wind and tide are to be taken into the account, it is impossible to arrive at a very accurate estimate of the speed of the vessels. But the main object of the experiments may, I think, be attained by making a trial on the spring tides, when their velocity is quite equal to the current in the great river. The experiment may then be made by towing one, two, and three vessels between given points; and to assist in ascertaining as nearly as possible the speed, I propose anchoring three or more two-boats at intermediate stations, provided with log and glass, to the rate of the tide every 10 minutes during the time the experiment is making.

Budgerows will be preferable to pinnaces for towing, both on account of the form of their bottoms, and of their not being so much cumbered with masts, &c. The accommodations they afford are, I believe, little inferior to those of the pinnaces.

Calcutta, 30 April 1829.

I have, &c.
(signed) *James H. Johnston.*

(14.) Letter from Mr. A. P. Wall to Capt. J. H. Johnston; 12 April 1830.

(14.)—LETTER from Mr. *A. P. Wall* to Captain *J. H. Johnston*, commanding Honourable Company's Steam Vessels, dated April 12, 1830.

Sir,

AGREEABLY to your request of the 16th instant, on which date I had the honour to report my safe arrival at Calcutta with the Honourable Company's steam vessel Hooghly, from her third voyage to the Upper Provinces, I beg leave to submit my remarks on the occasion for your information and communication to the Marine Board. It is proper, however, that I should premise that my attention during the trip was (as doubtless you must be aware) chiefly devoted to the safe conducting of the vessel, and therefore it is not possible for me to give so circumstantial an account of the performance, &c. as was made by yourself and Mr. Warden of the first and second trips.

2. I left Calcutta on the 9th of January at 6 A. M., having the boxes filled with coal, (containing about 500 maunds,) 63 native servants belonging to the Governor-general, and about 40 tons of baggage, provisions, water, &c.; the vessel was consequently deeper than on any previous voyage, being four feet seven inches forward, and four feet one inch aft. In this trim (as must be expected) I found her more unmanageable than when at her usual draught, and made two revolutions and a half less of the paddle-wheels. In true currents she steered tolerably well.

3. On the 11th at 9. 20. A. M. I arrived at Bussuntpore, where we landed our empty water casks, and received about 60 maunds of coal to prevent unnecessary delay at Kulna, and at 10. 50. A. M. I proceeded on (the tide being favourable at the time for making a passage through Goodlad's Creek), but was again forced to anchor and remain at the entrance until half-flood before there was water sufficient to admit the vessel to pass through, thereby causing a detention for tide of three hours and a half. I would here beg to suggest that this passage be not attempted with a falling tide, as only one cubit water remains in it, and a vessel grounding in such case would be placed in a dangerous situation; and, further, I always found it necessary to get ropes out from the head and stern, with the crew on shore to guide the vessel through, the passage being narrow, circuitous and shoally; but notwithstanding this precautionary measure, we took the bank on every occasion of passing, several times with bows and quarters; and, what adds more to the difficulty, there are generally a great number of country boats in this place, which enter from both sides of the passage as the tide begins to rise. I did not experience difficulty in passing through Chaud Kallee on our way up, it being at the time high-water, and the passage clear of boats. I however deemed it prudent to lower the stern boat and towed her through. This I would also suggest being done on all future occasions, as a measure necessary even with quarter davits. As on our return through this place, we came up with a number of large country boats, and in endeavouring to pass them got against the bank; the only damage, however, sustained was by a tree breaking one of the venetians of the poop cabin. The greatest care and attention is requisite in going through all these narrow passages against the tide, from the danger of the boats that pass them at all hours, day and night, independent of which, much danger is to be apprehended from the stumps and branches of trees breaking or seriously injuring the paddle-wheels. All these obstacles I am informed, however, may be avoided by taking the lower route; the distance is certainly greater from Calcutta to Kulna by 80 to 100 miles, but it may perhaps be worthy of consideration whether this would not be preferable to risking the safety of the vessel, and I apprehend the passage would scarcely cause a delay of more than a day and a half in the trip.

4. On the 12th at 1 P. M. I arrived at Kulna, where I hauled to the jetty, and received about

about 300 maunds of coal, and at 2. 30. proceeded on for Comercolly. In passing through the Modomutty, or Barasshy river, the fishermen had commenced to stake it across there was however sufficient room for the vessel to pass, but instead of crossing from the regular channel we had to pass from the opposite bank of the river in nine feet water. On our return I found one of the rows of stakes moved from their original position, being pulled up and the ends fallen down with the stream; this, together with a number of other bamboos, stuck in different parts of the channel, that it was with the greatest difficulty I could find my way through, there being a light fog at the time. I would beg to call your particular attention to this, for the purpose of having a sufficient opening left for the vessel to pass on the deep side of the river, without being in danger of running on those stakes, any one of which is sufficiently large to go through the vessel's bottom, or break the paddle-wheels.

5. On the 14th at 1. 15. P. M. arrived at Comercolly, where we remained that day to take in coal and clear the flues, boilers, &c. In the Gorri river, from Comercolly downwards, the current was about three miles and a half per hour, and from its very circuitous route was litttle better than an eddy; it affected the vessel's steering very much. There are a number of shoals also in this river, which are of hard clay. The banks are steep, and of some substance, so that a vessel falling against them would endanger the paddle-wheels.

6. On the 15th at 7. 45. A. M. started from Comercolly, and entered the Ganges at Koostea, the current running about two miles per hour. From Jenadar Thana to the head of the Rose Marra river (two miles, or thereabouts, above the Jellinghee) the current was strong, averaging about four miles per hour, the banks occasionally falling in, and the water generally not exceeding six to nine feet in depth. At this place we found the rudder at times quite insufficient to command the vessel. This was invariably the case, even when not drawing more than four feet two inches forward; and three feet four inches aft, if the currents were strong, and the vessel within a foot or so of her draught. I am led to conclude it is in consequence of the body of water being insufficient for the weight of the vessel, as I always observed the head dipping from six to eight inches in approaching a shoal.

7. On our way up the Ganges to Dinapore we had several calm days, which in some measure impeded our progress, as the channels are much better traced with a slight ripple on the water than with a glassy smoothness; moderate head-wind for this purpose is preferable to calms. The currents differed very inconsiderably, and though they did not generally exceed one mile and a half per hour, I found them frequently as rapid as four miles. I particularly noticed this from Shunar to Invalid Tanna (between Derriahpore and Bar); the current at this place has taken nearly the course that the Hooghly run in 1828, and left that we were forced to go last year, by the way of Dulolpore, and is very rapid and shoal.

8. On the 25th left Dinapore, encountered a number of difficulties off Chupra, and in consequence applied to the magistrate of that station for a pilot to proceed up with us; two were sent, one proved the man who had acquitted himself with so much satisfaction on the preceding trip, and it is proper that I should here state that his conduct was equally satisfactory on the present occasion.

9. On the 26th at 4 P. M. run on shore near Bhorumpore, and was necessitated to lighten the vessel, having previously endeavoured to heave off without effect with the bower anchors; for that purpose procured a large-sized pinnace, "Bellona," belonging to Woodin & Co., on her return to Calcutta empty, and had come-to for the night abreast of us. After taking out all the Governor-general's baggage and servants, and letting the water out of the boilers, I succeeded on the following morning in heaving her off. Trimmed the vessel to four feet one inch forward, and three feet five inches aft, and took the pinnace in tow, keeping her about 25 fathoms astern, to prevent her running on board of us in case of taking the ground suddenly. On getting into a shoal and intricate passage off Hurdee, cast her off and ordered the Serang to track through. Near Gay Ghaut I again took them in tow, and although I found the navigation from that place upwards as bad as any I had met with, I did not again let them go until in sight of Ghazeepore, and this was only for a few minutes, while crossing a ridge of sand that extended across the river, with less water on it in many parts than our actual draught.

10. We reached Ghazeepore on the 29th January at 2. 30. P. M., and left, on our return for Monghyr, on the 2d of February. On the return voyage to that place I adopted your plan of using the stern anchor, from which I derived great benefit, and could approach a shoal with the greatest confidence, and ride with the vessel's head in a proper direction for starting. It was also of great service in casting the vessel in narrow places, but from Monghyr down I could not make use of a stern anchor, in consequence of having the pinnace in tow. On three occasions that we took the ground I made the pinnace slip the tow-ropes and sheer off, and being of light draught, only two feet nine inches returning, she always went clear of every thing, except on one occasion, when the bill of her anchor tore off a part of the Hooghly's quarter badge. I deemed this the most prudent and safe method of towing; had I lashed her bowsprit to the Hooghly's stern, I think when the former took the ground in swinging broadside to the stream, the pinnace must have fallen alongside, with her stern to our head, and would in some measure injure both vessels, and the difficulty of extricating them from such a situation would, I conceive, be very much increased. Of the two evils, therefore, I considered it better that the towed vessels should risk touching, than to fall alongside the tugging vessel. Perhaps also it may be proper for the vessel to be towed being taken alongside, when it can be done without inconvenience to passengers, as in this case the stern anchor might be used to advantage, and the engines

Appendix, No. 25.

(14.) Letter from Mr. A. P. Wall to Capt. J. H Johnston; 12 April 1830.

backed when occasion required, neither of which can be done with a vessel in tow astern, by which you are deprived of two of the greatest essentials in navigating the Ganges. In October 1829, on returning from Dewangunge in the Bhagirattee river, after making the attempt to get to Berhampore with his Excellency the Commander-in-Chief, I took his boat, the "Lion Pinnace," alongside, in consequence of the river being very low and narrow, for the convenience of working the stern anchor. His Lordship complained however of the noise of the paddle-wheels; I therefore abstained from making further trial of the experiment on this occasion. It would appear to me that the vessel to be tugged should have her masts up, fore-and-aft sails bent, and be furnished with luggies, track-lines &c., and a boat, and the people on board to be at all times prepared for letting go at a moment's notice, as on the several occasions of our casting the pinnace off they made sail or tracked, as was requisite to keep her in the channel.

11. From Monghyr down used both boilers when occasion would permit; this I effected by ordering the second to be made ready about an hour previous to my reaching a certain point, from whence I knew of a run without danger from 10 to 20 miles. On approaching shoal water the fires of one boiler were discontinued. In this way the trip was expedited, and the expenditure of fuel considerably saved.

12. It would appear to me to be scarcely possible to limit the distance which a vessel of the Hooghly's draught shall proceed in the dry season up the Ganges, as she is as liable to meet a barrier of sand in the lower as the upper part of the river. I infer this from having found a boat two miles below Seeregully, a sand extending completely across the river, and the deepest water on it being only five feet in the width of the river to this place, near a mile, and the current not exceeding one mile and a quarter per hour.

13. I met with considerable detention from the ignorance of our pilots in some stations, and beg to refer you to the annexed list for their names, capabilities, &c.

14. Much inconvenience was also experienced both on the passage up and down, in consequence of not having a light fast-pulling boat, for the purpose of sounding, which is so frequently necessary on voyages of this description, as I could not work the engines sufficiently slow to have the vessel under proper command, and admit of the jolly-boat keeping ahead. To this I attribute the vessel's having grounded more frequently than otherwise would have been the case.

15. The coal depôts are properly selected for the present season of the year. It may, however, be worthy of consideration whether, for making the passage during the rains and strength of the currents, a small supply of coal should not be lodged intermediately between the present depôts of Rajmahal and Monghyr, (say Bogilpoor), and between Monghyr and Dinapore (Bar), and also between Dinapore and Ghazeepore. A little delay will necessarily take place to receive the coals at those places, but I think it would more than compensate in the run; on the whole, judging from our voyage in September 1828, the coal boxes will barely contain sufficient to last from one of the present coal depôts to the other, with a vessel in tow, more particularly as the quality of the fuel now at the depôts on the Ganges is not the most superior, it being at many stations nearly one-third small coal dust with particles of dirt; it was with some difficulty we were able to keep the steam up with it.

16. On my passage up and down, I noted several boats that had been lost in consequence of getting upon sunken trees or boats, dangers equally as bad as rocks; there is nothing to warn you of these dangers, and you run on unconscious until upon them. On one occasion I found I was running direct for a sunken tree about a mile below Duboulee, and should most probably not have escaped, had I not been warned of my danger by people on shore, whose boat had only a day or two previous to my arrival struck upon it, and sunk alongside the bank, before they could get her secured, or any portion of the cargo out. I saw another boat laying fixed upon a tree, with the branch through her, about one mile above the entrance of the Surgoo river. These dangers might possibly in a great measure be obviated: I think, were peremptory orders given by the magistrates to remove the fallen trees from the banks, and to cut down such as the next rains must lodge in the bed of the river. A bamboo with a small flag should be fixed to those that cannot be removed from the bed of the river, which would no doubt prevent many losses.

17. It is perhaps proper that I should state, since the additional pantries, cooking places, &c. have been built upon the sponcheons, the vessel falls over very much when the helm is put hard up or down; and on one occasion, in passing through a creek in the Sunderbuns, she heeled so much, that the water came into the scuttles on both sides as she rolled: never having noted an occurrence of the kind previously, I attribute it to the additional top-weight on the sponcheons.

18. The vessel went on shore frequently during the trip, in two instances struck the ground severely, and was with great difficulty hove off the sands on several occasions; nevertheless, I am not aware that she is injured in any way. The only thing I have heard from the engineers is that two of the cylinders holding down bolts have got a little slack.

19. I hope I may be permitted in conclusion, to bring to notice the universal good conduct, zeal and attention of my officer, and the engineers, throughout the trip.

Calcutta,
12 April 1830.

I have, &c.,
(signed) *A. P. Wall.*

A LIST of Pilots employed in the Honourable Company's Steam Vessel Hooghly, during the Third Voyage to the Upper Provinces.

NAMES.	DISTANCE OF PILOTAGE ENGAGED FOR.	GENERAL REMARKS AS TO CAPACITY
Burkattah - - -	- - Calcutta to Kulna in Jessore.	- - totally ignorant of the Lower Sunderbuns, and quite lost until the afternoon of the second day, when being told his position, a perfect master at Kulna.
Nazer Mahomet and Mahomet Sulserdee.	- - Kulna to Comercolly.	- - the former had been that route the preceding year, the latter not for seven years; both incompetent as pilots.
Goluck and Akoor, mangies.	- - Comercolly to Jellinghee river.	- - behaved very well, but not of the class of men proper to become pilots.
Pushon Chowdry -	- - Jellinghee river to Surdah.	- - behaved in like manner with the above two; not of the class to become efficient as a pilot.
Comul - - -	- - Surdah to Rajmahal.	- - assistant to the Ghaut mangie; totally useless, and a hindrance more than otherwise; landed in consequence at Bogwangolah with certificate to that effect.
Kadoo - - -	- - Bogwangolah to Rajmahal.	- - a smart active man, engaged by me at that place, taken on to Peerpointy, in consequence of his relief at Rajmahal being useless.
Roopchund - -	- - Rajmahal to Peerpointy.	- - of no assistance, received a certificate to that effect when discharged.
Terbhowen and Mamou	- - Peerpointy to Manayar Chuk.	- - jaul pulwarree mangies or native pilots, smart men and gave satisfaction.
— - - -	- - Manayar Chuk to Monghyr.	- - jaul pulwar mangie; a native pilot and a clever man.
Ramjee - - -	- - Monghyr to Medine Chokee	jaul pulwar mangie; gave every satisfaction.
Rutton and Dyme -	- - Medine Chokee, off Akburpoor.	- - jaul pulwar mangie; gave every satisfaction, carried on to Bar in consequence of not meeting any relief pilots.
Sooghur pilot, accompanied by Seelah.	Bar to Peeparpointee -	- - both useless; the first in particular was discharged with a certificate to that effect on the second experimental trip, and on the present landed at Patna as useless, having led us into more difficulties than we should otherwise have met with.

(continued)

(14.) Letter from Mr. A. P. Wall to Capt. J.H Johnston; 12 April 1830.

NAMES.	DISTANCE OF PILOTAGE ENGAGED FOR.	GENERAL REMARKS AS TO CAPACITY.
Sirdah - - -	Dinapore to Chupra -	- - behaved very well, having only arrived one day previous from Revalgunge.
Beechoo and Beechund	Chupra to Ghazeepore	- - jaul pulwarree mangies; both excellent pilots, and as such took them on to Ghazeepore, and returning to Dinapore, second time employed, and behaved well, giving every satisfaction.
Kullen - - -	- - Peeparpointee to Hurdee.	an indifferent kind of pilot in practice.
Jodah and Lall Muntur	- - Hurdee, about two miles only.	passable only as jaul pulwariahs or native pilots.
Mowit - - -	- - Gay Ghaut to Bulleah.	- - jaul pulwarrie mangie; a very good pilot; continued on to Buxar, not meeting his relief.
Rutton - - -	Buxar to Ghazeepore	- - jaul pulwarrie mangie; a native pilot but not of the first class.
Bussund and Putto -	- - Howuteepore to Ghazeepore.	- - jaul pulwarrie mangie; a clever active man and gave satisfaction.
	RETURN VOYAGE.	
Bussund and Putto -	- - Ghazeepore to Beerpore.	behaved well on the return trip,
Putton - - -	Beerpore to Buxar -	behaved as on the passage up.
Mowit - - -	Buxar to Hurdee -	acquitted himself equally well as on the trip up.
Joahdah and Lall Muntur.	- - Hurdee to Bherumpore.	similar conduct to that mentioned on the voyage up.
Kutten - - -	to Dewar River -	as on the trip.
Beechoo, Beerchund -	- - Dewar river to Dinapore.	- - none who had been that way for the past six months, though they behaved well.
Lutetman and Babee -	Dinapore to Bar -	- - very good active men; Lulah, who went up afterwards, joined in a state of intoxication.
— - - -	Bar to Soorajgurrah -	none.
Rutton - - -	- - Soorajgurrah to Monghyr.	acted as on the passage.
Buxoo - - -	- - Monghyr to Jugneera Rocks.	a very good pilot.
— - - -	to Peerpointee - -	acquitted themselves with satisfaction.
— - - -	to Rajmahal - -	- - a smart active fellow; taken on to Surdah, not having confidence in Pushan's abilities.
— - - -	to Surdah - -	as on the passage up, only middling.
— - - -	to Jellinghee - -	- - a servant of the Ghaut mangie; a man useless and incompetent, not being in the habit of going in boats.
Okoor - - -	Commercolly - -	behaved as on the passage up.
— - - -	to Kulna - - -	ditto - ditto - ditto - of little use.
— - - -	Kulna to Calcutta -	- - a very excellent pilot for the Upper Sunderbuns; not competent to take a vessel through the Lower.

The jaul pulwarree mangies are the best calculated for directing a vessel through the intricacies of the inland navigation, and acting as pilots to the large native boats; they have a practical knowledge, and from the general appearance of the water, they form an opinion of the depth you are likely to find.

Fort William, Marine Board-office,
11 May 1830.

(15.) Extract Letter from Bengal Government to Court of Directors; 12 October 1830.

(15.)—EXTRACT LETTER from the Governor-general in Council at *Bengal* to the Court of Directors, in the General Department, dated 12th October 1830.

Sirs,

1. ON our proceedings of the 22d of June last, the Governor-general recorded a Minute, bearing date the day preceding, proposing for the reasons set forth therein at length, that Captain Johnston, formerly commander of the steamer Enterprize, and who has uniformly shown himself an excellent officer and well acquainted with the practical and scientific questions connected with steam navigation, as well as with the construction of steamers both for sea and rivers, should proceed to England in aid of the purposes in the view of Government, connected with this subject, as explained at length in our letter dated the 18th of May last.

2. We beg to refer your Honourable Court to the Minute in question, for the complete exposition of the motives which induced the Governor-general to propose this step. We trust his Lordship's reasoning will satisfy your Honourable Court as to the impossibility of putting either yourselves, or the professional persons who must be the agents for executing

Steam Communication with India, and on the Rivers of India.

anything that might be determined, in full possession of all that has been done, and of the results of the different experiments made by mere written communication, howsoever minute and voluminous.

3. The objects in our view in deputing Captain Johnston, are thus explained in his Lordship's Minute, a copy of which was furnished to that officer for his instruction:

That he proceed to England as agent to this Government for superintending the preparation of steam engines, with plans of vessels to be used as tugs, as well as for the conveyance of cargo, adapted to river navigation in this country.

That he be desired to collect and possess himself of full information as to the experiments made and points ascertained in connexion with the subject, and be supplied with copies of the material papers.

That in England he be placed entirely at the disposal of the Honourable the Court of Directors, as a person capable of giving the best information as to the ends in the view of the Government in respect to the river steam navigation, and as to the means of accomplishing them, and the obstacles to be expected.

That the Honourable Court be solicited to afford assistance to Captain Johnston in completing his plans, in concert with scientific engineers and machinists, and that on such being done to their satisfaction, Captain Johnston be permitted to return to this country with the draughts of the vessels, in order that they may be constructed under his superintendence, and that orders be given for preparing the engines and forwarding them with all practicable expedition. The number to be supplied may be left to the discretion of the Court, but it ought not, his Lordship said, in his opinion, to be less than what might be requisite to fit up three tugs.

4. The Marine Board and officers employed upon river steam navigation in this country, have been directed to keep Captain Johnston informed of every thing bearing on the subject that may come to light here, and Captain Johnston has in like manner been desired to communicate any new discoveries, and to report the progress of his deputation, with any information calculated to assist the measures in hand in India, directed to the same end.

(16.) Extract Minute of Governor-general; 21 June 1830.

Cons. 22 June.

(16.)—EXTRACT MINUTE of the Governor-general, Lord *W. Bentinck*, dated 21st June 1830.

IT will be evident to any person who examines with attention the proceedings of this Government for the past two years, connected with river steam navigation, that the branch of the subject in respect to which our information is most defective, and yet which meets us in every turn, and has hitherto presented most obstructions to the success of our endeavours to introduce this grand invention upon the rivers of India, is the method of adapting the steam power with most advantage. We possess but few engines, and these are mostly of the same or nearly the same kind; they are all in full employ in vessels or in other works, and we can make no experiments with them without losing their service in the interval. When a point has been established in respect to the navigation, such for instance, as the necessity of reducing the draught of the vessels used in the upper navigation to a maximum of two feet, we have only the weight of our present engines to assume in calculating the necessary displacement and consequent dimensions of the vessel to be built. It is now more than a year since the Marine Board were directed to procure from Captain Forbes, our superintendant of steam engines, and the officer best acquainted with these machines in the country, a descriptive indent of several to be written for from England for purposes of river navigation. Such an indent has never been furnished, and there is no blame to Captain Forbes that it has not; for, imperfectly acquainted as he must be with the progress of home improvement in this particular branch, with his information necessarily six months in arrear, he cannot ascertain that the engines he might describe would be sure to be the best that could be put in hand. An experiment is making to ascertain whether one engine may not suffice. Upon the result of this much will of course depend; but it may only suggest further experiments, and will still probably leave much more to be done before we shall be able to come to any satisfactory determination as to the best means of attaining the end we have in view.

Fortunately the voyages that have been made, and the information accumulated in them, have given us a distinct perception of the end to be aimed at. We know that we require manageable vessels of considerable power of engine, and consequent velocity, but not drawing more than two feet water for the maximum. It is my wish to combine with our efforts to attain this object, by means to be employed here, a reference to the ingenuity and science of Europe, as applied daily to the improvement of steam engines. I do not think it would be sufficient to state our wants in correspondence and reports, to be submitted through the Court of Directors, to scientific machinists and engineers in England, but being well aware that much will be gained even by this, I have desired that the result of the experiments made, and an abstract of all that has been done hitherto in connexion with this subject, shall be collected and put together in a shape to be printed and circulated, in order that the consideration of others may be invited to a matter to which I attach so much importance, and that opinions may be gathered upon it in all quarters.

For our particular purpose, I think it will be necessary, in addition to taking those steps to draw attention to the subject, that some one intimately acquainted with its details should be induced to proceed to England, and put himself in communication with the scientific men that may be selected or indicated by the Court of Directors as most worthy of their confidence, in order that if any points should be omitted, or imperfectly explained in the

Appendix, No. 25.

(16.) Extract Minute of the Governor-General; 21 June 1830.

statements made from hence, the requisite information may be supplied on the spot, and by keeping up a correspondence with those employed on the scheme in India, at the same time that he hold constant intercourse with the engineers at home, this officer may be the means of securing the most perfect unanimity of plan and of execution in whatever may be attempted.

For these reasons I am induced to propose that Captain Johnston be directed to proceed to England to superintend and assist, under the instructions of course of the Court of Directors, the preparation of steam engines, and the plans of vessels to carry them, adapted to river navigation in this country.

BOMBAY.

(17.) Letter from Bombay Government to Court of Directors; 31 May 1823.

(17.)—EXTRACT LETTER from the Governor in Council at *Bombay* to the Court of Directors (Public Department) dated 31st May 1823.

2. We have for some time past been engaged in inquiries respecting the practicability of opening a communication with England through Egypt by means of steam vessels, and observing from the public prints that the subject has also been agitated in England, we consider it will be acceptable to your Honourable Court to be placed in possession of such information as we have obtained on the subject; and to be assured, in case your Honourable Court should be disposed to sanction the arrangement, that the difficulties on this side of the Egyptian Isthmus are not greater than on the other.

3. The distance from London to Bombay through Egypt is not great, but the winds in the different seas that must be crossed are never all fair at any one time; so that if the passage be good in the Mediterranean or the Indian Ocean, it is bad in the Red Sea, or *vice versâ*. For this reason, although the whole passage from London to Bombay was once made in two months, yet it generally takes three months to go from Bombay even to Suez. The great advantage of a steam boat is, that it is independent of the wind. It would therefore go through all the seas between this and England, and at all seasons, nearly at the same rate.

4. The average rate on the British seas appears by the report made to Parliament on the subject of steam vessels to be about 11 miles an hour: one boat is mentioned as going 10 miles an hour against a stiff easterly wind. Taking eight miles an hour for the average rate (which is very moderate considering that the whole voyage lies through seas little subject to bad weather), and supposing the distance from Portsmouth to the mouth of the Nile (by the Straits of Gibraltar) to be 3,000 miles, and from Suez to Bombay as much more (both of which assumptions are considerably above the truth), the time occupied by the sea voyage would be 31 days, the Isthmus might easily be crossed in three days, and the whole would take only 34 days, not exceeding by more than a fortnight the ordinary period till lately required for the post to pass between Bombay and Calcutta.

5. We have here alluded to the circuitous communication by the Straits of Gibraltar, because in time of war, when quick communication is most required, we might not be able to send the packets through France; the probability, however, of our being at once shut out from all the routes across the continent, and all the ports on the European side of the Mediterranean is extremely small; and by any of them the time would be much short of what we have estimated.

6. Egypt has seldom or never been so disturbed as to stop our packets, but if it were so, the steam boats might for the time go to some port in Syria on the one side, and to Bussora on the other, so that the packet would still pass with great rapidity, though not so quick as through Egypt.

7. It appears to us, on our present view of the question, that two boats on each side of the Isthmus would be quite sufficient to allow of a packet being dispatched regularly every month.

8. We have no means of estimating the expense of such an establishment, but we conceive that it would be the means of so greatly facilitating the communication between India and the mother country, and so entirely change the relation between the two, that your Honourable Court would derive full indemnification for any expense which you might incur in the speedy transmission of your instructions; at the same time it would become the channel of all the private correspondence between England and the other Presidencies in India, and a charge for postage equivalent to the great advantages obtained, would, it may be presumed, be cheerfully borne by the Indian community at large.

9. Private speculators might, we conceive, be also found, when the practicability of the arrangements is once fully established, to take steam vessels on themselves, and they would no doubt find a considerable recompense also from the conveyance of passengers by this route, which would now be very generally adopted if the public could depend on a regular conveyance to Egypt.

Steam Communication with India, and on the Rivers of India.

(18.)—LETTER from the *Bombay* Government, in the Marine Department, to the Court of Directors, dated 18th April 1830.

Honourable Sirs,

1. MR. J. W. TAYLOR, who lately came out from England overland *viâ* Egypt, having submitted to us certain proposals for the immediate establishment of an extensive line of communication between England and India by means of steam vessels periodically leaving both countries, we have informed that gentleman that we are of opinion that your Honourable Court are alone competent to pass a decision on his proposals, and that they would therefore be submitted for your consideration, accompanied by all the information we could obtain calculated to enable you to judge of the expediency or otherwise of entertaining his propositions.

2. In submitting therefore these proposals to the notice of your Honourable Court, we beg to accompany them with an estimate of the expense of building and sailing, including the repairs of a steam vessel of the size and description of the Hugh Lindsay, continually employed in voyages to and from Suez, amounting to rupees one lac, forty-six thousand and sixty-four annually (1,46,064), together with a statement of the probable receipts from postage on letters transmitted quarterly by this mode of conveyance, and the amount actually realized on the letters and packets sent by the Honourable Company's cruizer Thetis and steamer Hugh Lindsay.

3. In regard to these statements we would observe that since steam navigation in this country is quite in its infancy, no data at present exist for arriving at accurate conclusions, either respecting the expense or profit of steam vessels, if their maintenance is persevered in by Government; we are however inclined to think that whilst on the one hand the expense is overrated, the Postmaster-general's estimate of the postage revenue likely to arise is considerably below what will ultimately accrue to Government when this mode of communication is (as we entertain no doubt will ultimately prove the case) generally resorted to by the community from all parts of India.

4. We beg to add our opinion that no doubt can exist of the practicability as well as utility of extending steam navigation to Egypt from Bombay, and that we should consider it a most fortunate circumstance if our attempts to promote this desirable object shall, by indicating such to be the case, induce men of enterprize and capital to embark in an undertaking of the nature proposed by Mr. Taylor.

5. Your Honourable Court must possess greater facilities than we do of judging of all that respects that part of the question which relates to the Mediterranean and the English Channel. Difficulties may arise as to depôts of coals, but none of a nature we should hope that may not be overcome. The enterprize of individuals in such a navigation will undoubtedly effect much good, and their zeal, knowledge and activity, stimulated by the hope of gain, would accomplish more, and at a cheaper rate than can in reason be expected from public establishments.

6. The plan proposed by Mr. Taylor evidently requires great and combined means to give it even a prospect of success; we are of opinion that his calculations are far too sanguine, and that his plan is on too large a scale. These are however objections to his scheme that may easily be obviated. In the first instance we must give our opinion as relates to India that the undertaking may and should be conducted on a more limited scale, and subsequently extended according to circumstances. On the degree in which Mr. Taylor possesses the means of carrying his plans into effect, or can command them, we have no opportunity of judging, but this we deem of little importance, as your Honourable Court can easily determine this point.

7. In transmitting these proposals for your consideration we cannot avoid expressing our decided opinion that almost incalculable advantages may be anticipated from a well-established steam communication by the Red Sea, and our earnest hope that unless other proposals of individuals have been entertained, and their plans put in progress, and in case Mr. Taylor's schemes are viewed as either inexpedient or impracticable, that every support will be afforded by your Hononrable Court to maintain this desirable communication by vessels in the public service.

We have, &c.
(signed) *John Malcolm.*
John Romer.

(19.) Letter from Mr. J. W. Taylor, to Sir J. Malcolm; 1 December 1829.

(19.)—LETTER from Mr. *J. W. Taylor* to Sir *John Malcolm*, Governor of *Bombay*; dated December 1, 1829.

Honourable Sir,

THE very great anxiety which your Excellency's Government has shown to bring about the desirable measure of establishing a regular communication between Great Britain and India, by means of steam vessels periodically leaving both countries, encourages me in the hope that the proposals which I have the honour to submit in the present letter, and which I have just arrived from England, *viâ* Suez, expressly to carry into effect, will be deemed worthy of the support and countenance of your Excellency's Government.

I have for upwards of four years been employed in maturing such a communication for the East Indies, by means of steam vessels, as shall answer all the demands of the Anglo-Indian community, not only for its intercourse with Great Britain, but also with all parts of India itself, and which, in point of regularity, or speed of progress, or cheapness of charge, shall

(19.) Letter from Mr. J. W. Taylor to Sir J. Malcolm; 1 December 1829.

shall leave little to be desired. I trust I may with truth assert, that every point in this undertaking has been attentively considered, and its contingencies estimated and provided for. In order, however, that nothing might be wanting to the general efficiency of the establishment, or to the comfort, while *in transitû*, of those whom we hope will become our passengers, I have myself passed to India in the very route intended to be followed, and have thus in person superintended the general arrangements, a more particular specification of which will be found in the accompanying paper, marked No. 1. Anticipating, as I venture to do, an expression of satisfaction on your Excellency's part, as to the terms and conditions, I beg leave respectively to inform your Excellency, that the requisite number of steam vessels being already built and equipped, a commencement may be made on the proposed line of communication within three months from the period when the assent of your Excellency's Government to my propositions may be made known to me.

If then I should be honoured with such assent, it is my intention within the period already specified to be the means of introducing into British India such a number of first-rate steam vessels, unexceptionable in point of size and equipment, as will enable me to propose myself to become a general carrier to all the Indian Governments, both for England and in India, and will admit of those Governments maintaining a constant and regular communication with Great Britain, and all principal parts of British India, on the 1st and 15th of every month. I profess myself ready to take charge of all the mails, both of the Governments and of individuals, without restricting either to size or quantity of letters, which I will engage to deliver in a specified time, taking up from and delivering at the different Presidency post-offices all such letters as I may be entrusted with, binding myself to be ready to start with such mails from all the three Presidencies, and also from London, twice in each month. I will further enter into engagements with Government, by which I will bind myself to furnish all officers of his Majesty's and the Honourable Company's civil, naval and military services, with passages to and fro, between England and India, at the Honourable Company's regulation prices, and I will generally bring them to their journey's end in about 60 days, after a transit of at present unsurpassed pleasure and facility. The establishment will also yield the means of communicating twice a month with all the principal parts of India, under that degree of speed and precision which steam vessels are so well known to ensure, the regularity of which kind of intercourse it will be our constant endeavour to preserve unbroken. Thus adding most materially to the consolidation of the at present divided portions of the Indian empire.

The advantages thus proposed to the Governments in the more speedy intercourse with England, and in the carriage of the letters to and from that country, and to the members of the different services of his Majesty and the Honourable Company in the readier and more economical medium of visiting their native England may be secured to all on the following conditions:

The projectors of this new mode of communicating with Great Britain have no intention of asking your Excellency's Government to make them any preliminary advance of cash to ensure an immediate realization of the important changes they thus propose to effect, but with reference to the very heavy outlay which their establishment will lay them under, and more particularly adverting to that very serious addition to their dead capital which a provision of that quantity of coal necessary to ensure the intended frequency and regularity of their voyages will involve, they feel themselves compelled, before actually embarking in their undertaking further than the build and equipment of their different vessels, to solicit of your Excellency's Government the favour of a clear and distinct guarantee, that for a specified period, say for two years, they shall be in receipt of a fixed and definite income annually; and they hope to be able to show that your Excellency may acquiesce in their request without exposing Government to a chance of being out of pocket. Should this be granted, the proprietors will agree at the end of two years to continue all the proposed advantages of their establishment as to letters and passengers without expecting any further remuneration than the Acts of Parliament and the regulations of the Honourable Company entitle them to demand. Without such guarantee, however, they could not venture to undertake an enterprize of so much magnitude, so closely connected as it is with the extensive purchase of so unsaleable an article as sea-coal. With this proviso, the following are the conditions, which are respectfully submitted for the consideration of your Excellency:

Your Excellency is doubtless aware that the Supreme Government and the communities of Bengal and Madras, have already agreed to give to a Mr. Waghorn, of the Bengal pilot service, a modified rate of payment according to a certain scale, made contingent on the period of delivery, (of which scale I beg leave to enclose a copy) for all letters which he may bring out on a steam vessel, which he went home to build and equip. The actual prices thus agreed to be given to Mr. Waghorn will satisfy us, but since some certain amount of annual income for a specified period is, under the very heavy outlay to which the perfection of our establishment will expose us, absolutely necessary to its existence, we trust Government will agree to give us, for two years certain, payment at the same rate per letter, for such an annual number of letters as the records of the different Presidency post-offices show to have passed annually both from England to India and from India to England in a given year, such payment to be made by *pro rato* monthly instalments, commencing as soon as the steam vessels commence their deliveries of letters, to be calculated and charged to the different Governments, according to the proportion of numbers which the post-office deliveries and receipts during the year selected may show each Presidency to have received and forwarded for that year, and enduring for two years, when all steam postage is to cease; but the letters then to be carried free of that charge, and all other advantages herein contemplated

Appendix, No. 25.

Steam Communication with India, and on the Rivers of India.

templated to the services to continue. In short, for two years' fixed and certain annual remuneration, to be paid to us by monthly instalments, commencing when we commence our deliveries of letters, we will set the establishment into full and immediate operation, and we will continue its many and unquestionable advantages after the two years have expired, without then requiring any extra remuneration for the same beyond what the present Acts of Parliament and the Regulations of the Honourable Company admit of.

In making this sole requisition as the price of their ability and readiness to set this important establishment into full and immediate operation, the proprietors hope that your Excellency will be of opinion that their offer is not likely to be exceeded in point of liberality or eligibility by other individuals. It would have been most acceptable to the undersigned and his associates had it been possible to introduce their plan without making any stipulation at all with the different Indian governments or communities; but the enormous outlay necessary to their undertaking, and chiefly the heavy increase to the dead stock caused by the provision at first essential to a vigorous and uninterrupted prosecution of their intended voyages, rendered it absolutely necessary that for the first two years of their operations they should possess a clear and distinct guarantee from Government as to the extent of one portion of their annual returns before embarking on any proceedings. No item of those returns is better adapted to answer the purposes of all parties than letters, because the highly-diminished period in which they will, under the new system, be delivered, will render their arrival most welcome to the receivers, though accompanied by a postage charge, while their annual numbers in most years reaching the same average, will enable the carriers to calculate the amount of revenue they stipulate for, and thus proceed in their important operations with greater confidence of giving satisfaction to those from whose support they will derive their means of existence. By reference to the agreement with Mr. Waghorn, already referred to, it will be seen that the Supreme Government, and that of Madras, as well as that of the British communities there resident, have agreed to pay the same quantum of remuneration per letter for every letter brought by him as we are willing to work for; but, when your Excellency does us the favour to reflect how far more extensive and superior are the advantages we hold out to British India than any which the plan of that gentleman contemplates, we do hope that no doubt will remain in the mind of your Excellency as to the propriety of adopting our proposals. To particularize: Mr. Waghorn's is a single ship, built expressly to exclude passengers, and intended to navigate solely between London and Calcutta round the Cape of Good Hope, by which circumstance he does not anticipate an earlier period of delivery for his letters than 75 days, and he even anticipates the possibility of his requiring 100; thus denying all advantage to the Indian community in their capacity of passengers, and rendering those tendered to them in their character of correspondents of very doubtful and questionable importance. Our establishment, on the contrary, will benefit the Indian governments and community in both these characters most decidedly. As correspondents we will generally carry their letters in 50 days; nay, we will engage, barring only accidents not repairable at sea, which, in the way we shall be stored and fitted, are not very likely to happen, to deliver them in 65 days; while the regularity with which we shall go and come will benefit commerce as essentially as the later and more regularly received official news must prove advantageous to Government. As passengers, we offer the Indian public a highly-diminished expenditure, both of time and money: we enable them to calculate both to a nicety, thus conferring a privilege of a most invaluable nature, and by the frequency as well as certainty of period of our departures, we do what will perhaps more than all render both governments and governed in India favourable and friendly to our establishment, we place at the command of all persons whose invalid constitutions may cause the question of going quickly and certainly to sea to be one of life or death, an almost unerring medium of flying from that fate, which, from a compulsory residence on shore, owing to the hitherto acknowledged difficulty of getting at some seasons of the year to sea in India, has unhappily too prematurely overtaken many a valuable member of the Indian societies. The proprietors know not a benefit of higher worth promised by their establishment than this; and while they feel that any lengthy detail of the advantages which their steam vessels will ensure to the state and community of India must be superfluous with a Government which can so well understand and appreciate the public wants, they feel confident that Government will not suffer to pass unnoticed or unrewarded the full and complete manner in which the intended steam establishment will carry into effect what it has always been the benevolent endeavour of Government to accomplish, viz. the furnishing junior officers of the services with cheaply charged passages to and fro between India and England. These two points, viz. the more assured renovation of health to invalids, and the cheaper rate of passage to junior officers, would assuredly most strongly incline your Excellency to give every support to our proposals, even were the certainty of a direct advantage to Government less palpable than in the present case it fortunately is. The communities of Bengal and Madras have expressed themselves ready to pay Mr. Waghorn his own price for every letter he brings, without reservation, though he only contemplates as his maximum benefit bringing those presidencies 30 days nearer home than they now are; and he may possibly effect no change of any importance at all. It cannot be doubted then that in our case, when we shall annihilate at once, and *"pour toujours,"* half the time now dividing India from England, and where we offer other weighty benefits, only properly appreciable by those long resident in India, they will cheerfully pay the stipulated price for all their letters brought out in two years to have them free of steam postage always afterwards. Government, by charging these letters to the public at the agreed price, will run no chance of being out of pocket in those letters addressed to the public, though, as the letters dispatched and received annually by Government are not included in the average of the year selected, they

Appendix, No. 25.

(19.) Letter from Mr. J. W. Taylor to Sir J. Malcolm; 1 December 1829.

thus have the certainty of knowing that all their own letters will always be carried free. While then the public health, as in case of invalids, or the public convenience, as in case of passengers, will thus receive a very material benefit, commerce and correspondence will acquire a decided stimulus, the Indian empire will assume a consolidation quite unexampled, and the equally important interests of religion, of botany, and general science, will experience a full proportionate share of benefit, because by a very slight arrangement already in part provided for, rare and valuable plants, or animals of either country, may be interchanged and advantageously acclimatized. To sum up all, India will never again labour under the inconvenience or the stigma of being, as she has frequently been, six months without direct intelligence from or intercourse with England.

If the arguments which I have thus ventured to make use of, at, I fear, too great length, should induce your Excellency to confer on us the honour of your patronage and support to the proposed undertaking, I feel quite confident that our establishment will give general satisfaction; we shall at all times endeavour to prevent all cause for complaint, and I have no doubt but that our proceedings will be characterized by regularity. Respectfully venturing to anticipate the existence of a desire on your Excellency's part to see our proposals take effect, I would as respectfully suggest, that I am quite ready to return within a few days to England, in which case I see nothing to prevent the first steam vessel leaving for India in August next. It is clearly of importance, with reference to the passenger season, both here and in England, that no time should be lost. I pledge myself to your Excellency to be in England in 60 days from that of my being honoured with your affirmative reply, and that the first steam vessel shall be at sea in 30 days after I arrive. I shall feel truly proud in being further permitted to signalize your Excellency's splendid government of the Bombay Presidency by the introduction of so important, so interesting, so national a change, as will attend the operations of an establishment of regularly working steam vessels, such as I have herein ventured most respectfully to solicit the patronage and countenance of your Excellency for. Should it please your Excelleney to take us under the shelter of your patronizing support, I pledge myself at all times to conduct the undertaking in a manner satisfactory to the State, beneficial to the community and creditable to the proprietors. What can I say more? I have, &c.

(signed) *J. W. Taylor.*

1 December 1829.

P. S.—With reference to the foregoing proposal, it is necessary that I should distinctly explain that its scope and meaning is, if the Government should assent to its conditions, we will, in return, carry all *bonâ fide* Government despatches out and home free of charge.

PROSPECTUS of an Establishment of STEAM VESSELS.

THE object of the undersigned is to establish a regular communication by means of steam vessels navigating the Mediterranean and Red Seas, between London and the different Presidencies of India. The experience afforded by passages made by steam vessels on certain parts of the route selected, justifies the expectation that intercourse between the two countries may thus be effected in from 54 to 60 days.

The establishment of steam vessels raised by the undersigned is competent to maintain a regular intercourse of the above nature twice a month. The advantages of such a frequent communication with England, properly organized and conducted, are various and important; intelligence will be more rapidly and regularly conveyed; the two countries, by effecting intercourse between them in half the time now requisite for the purpose, will in reality be brought by so much nearer each other, and the commercial operations of the mercantile world will receive all the stimulus necessarily connected with a more speedy means of communicating with the mother country; the benefits derived by Government in the respect of more recent official news will be equally signal and valuable. It is the object of the undersigned to carry both passengers and letters according to the terms and conditions hereinafter mentioned. In respect to letters, the undersigned is prepared with a plan for carrying all such as he may be entrusted with, in such a manner across the Isthmus of Suez as will render it almost impossible, unless considerable and culpable violence be used, for the paper on which the letters may be written to receive or to communicate infection. The efficacy of this plan he is ready to submit to the decision of any committee of scientific or practical individuals that the Government may select to report upon it; it being only previously understood that the details which the undersigned may on this subject communicate are to be received in strict confidence by the committee. In respect to passengers, they will, while in transit across the Isthmus of Suez, be solicited to conform to such not inconvenient regulations as to their clothing and conduct, as will greatly lessen their own liability to be considered capable of communicating infection, and will thus shorten the period of quarantine to be imposed on them on their arrival in England to a term almost quite nominal.

For the comfortable passage of the small strip of desert composing the Isthmus of Suez the undersigned has also made peculiar arrangements; he has had a kind of carriage made by Messrs. Baxter and Pearce, furnished with very easy cross and lateral springs; the whole so constructed as to fit into a common camel saddle for fastening on the back of a camel; the varied action of those springs will entirely nullify the unpleasant motion of the animal, and will make the conveyance altogether as easy as a sedan chair; at night the carriage itself will make into two comfortable beds. With this preliminary detail of the preparations

Appendix, No. 25.

Steam Communication with India, and on the Rivers of India.

parations made, the plan will be, that vessels on both sides of the Isthmus of Suez shall start contemporaneously from London and Calcutta (having branch vessels for Bombay, Penang and Mauritius plying in concert) on the 1st and 15th of each month; that the passengers from Europe shall be taken to Damietta on the Mediterranean boats, thence carried across to Suez to meet the Indian vessels, which by that time will be in waiting there to receive them, and which having landed the passengers they may have brought from parts of India to Suez, will immediately return with the passengers taken on board at Suez; the passengers landed at Suez from India will in their turn be immediately conveyed across the desert to Damietta, where the London steam vessels will be found in waiting to carry them onwards to England. The alternation of this system as the different steam vessels arrive at Damietta and Suez, will complete the plan for the regular and uninterrupted communication between the two countries.

The undersigned has proposed to combine with the carriage of passengers the transport of all the letters, public or private, passing between England and India, the arrangements already referred to, by rendering any fumigation unnecessary, will obviate all the unpleasantnesses to correspondence resulting from that operation; while the regular system of arrival and departure twice a month, with the far speedier mode of delivery itself, will confer the most decided benefits on commerce and private correspondence, which have hitherto been both inconvenienced by irregularity and delay, or disturbed by intervals of six months' non-intercourse with, or non-arrival from England.

The undersigned also proposes to introduce such a sufficient number of steam vessels immediately into India as will admit of an equally regular and frequent intercourse being maintained between the three Presidencies and all principal parts of India, as is above proposed between them and London.

The undersigned is also willing to bind himself to furnish all officers belonging to his Majesty's or the Honourable Company's civil, naval or military services, as well as all gentlemen, agreeing to send and receive all their letters for and from Europe by these steam vessels, for the period of two years, on the terms hereinafter mentioned as agreed to be paid to Mr. Waghorn, with passages to and fro between England and India on these steam vessels, for which passages he will only charge them the prices fixed by the regulations of the Honourable Company; for which prices he will at all times keep up a good table, and will bind himself to observe time on the passage as far as possible.

The advantages thus proposed to the gentlemen of the different public services in India, as well as to all those making themselves thereto entitled by conformity with the conditions prescribed by the foregoing article, in the carriage of their letters twice as quick as is done at present, and in enabling them to get to England in half the period of time now necessary, at an expenditure not only fixed and certain, but also far below what it now costs them, will it is hoped, be sufficiently evident to induce them to agree to the terms on which the said advantages may be commanded, viz. that they will for two years to come have all their letters conveyed by these steam vessels, paying for the same for that period the same rates for letters as have been agreed to be given to Mr. Waghorn, of the Bengal pilot service, for all the letters carried by the steam vessel he went home to build and equip; if this be agreed to, the undersigned will, at the expiry of the two years, continue to carry the letters free of all steam postage, and will also continue the other advantages of the concern on the terms already mentioned.

Should the public of India acquiesce in the proposals thus made, and agree at once to have all their letters conveyed by his steam vessels for two years on the prescribed terms, the undersigned pledges himself to have the first vessel at sea within three months from the period of such public assent, and that the others shall follow without intermission in due and regular order, as is herein prescribed.

India has thus the opportunity of bringing herself within little more than six weeks of England; the community may command a rapid and regular mode of constant intercourse with their native land; will never again labour under the inconvenience of six months' non-intercourse with England; and above all important to invalids in India, they may command the means, hitherto unfortunately too difficult of realization, of passing quickly and certainly to sea, should illness or debilitated constitution render a sea voyage indispensably necessary to their recovery.

Should the foregoing considerations induce the Indian public to honour the undersigned by adoption of his proposals, he pledges himself to omit no possible exertion to give that general satisfaction which, after all, must prove the best guarantee for his success, and as he hopes his plans will be found to be well laid, and his arrangements judiciously brought into order, he trusts the approbation and cordial support of the public, will prove the meed of his long-continued endeavours to construct the establishment herein offered to their patronage.

December 1, 1829. (signed) *J. W. Taylor.*

Scale of Prices agreed to be paid at *Bengal* and *Madras* to Mr. *Waghorn*, per Letter:

Per letter of one sicca weight, if delivered in 75 days, three rupees; if in 88 days, two rupees; if in 100 days, one rupee.

Exceeding two sicca weight, treble the above prices, according to time of delivery; and so on for increased weights.

Newspapers the same as letters of one sicca weight

Law papers per ounce, the same as for letters of one sicca weight.

Appendix, No. 25.

(20.) Letter from Mr. J. W. Taylor to the Bombay Government; 21 March 1830.

(20.)—LETTER from Mr. *J. W. Taylor* to the Governor in Council of *Bombay*; dated March 21, 1830.

Honourable Sir,

I HAVE in a public letter herewith accompanying, already had the honour of submitting for the consideration of your Excellency, certain proposals for the immediate establishment of an extensive line of first-rate steam vessels, intended to ply periodically between England and India.

As that letter however was written in Egypt, and as on my tedious voyage from thence, I have had abundant opportunity of reconsidering the subject, I am desirous of being permitted to address to your Excellency a few additional remarks, calculated to elucidate our object, and to place the undoubted advantages offered by our establishment to the State and community, in the clearest possible light.

In the first place, since to ensure, beyond chance of failure, the proposed regularity and frequency of departure twice a month, both for and from England and India, it will be necessary to have spare vessels oppositely posted on both sides of the Isthmus of Suez, the proprietors will engage, with the view of more entirely meeting the convenience or exigency of Government, to have a steam vessel constantly ready to depart on seven days notice, should any sudden and unforeseen State urgency render it expedient for Government to send away a public dispatch expeditiously and immediately. In this case the proprietors will only expect to be reimbursed in the extra expenses actually incurred by the extra trip, such as full pilotages and port charges. At a cheaper rate than this, Government will hardly be able to command such a certain medium of forwarding urgent important dispatches. The whole establishment will also, if desired, be generally placed under the control of Government, the prescribed order of departure only not being broken in upon.

In the second place, the average of letters proposed to be struck, has reference only to the private letters of the community passing through the post-office, and does not include bulky packets of Government, which will at all times be carried without charge; and though at first view, the postage rate sought to be levied for two years on all the letters of the community, may seem to impose a tax not hitherto borne by the public, a slight examination will show that it is not so. I prove it thus: It is well known that every gentleman going to England on a sailing vessel, by the way of the Cape of Good Hope, is put to a heavy expense in providing an outfit of linen for the voyage. This, under the arrangements we have made, will be altogether superfluous on the steam vessel, because the ordinary stock of linen forming the wardrobe of a British gentleman in India, will here amply suffice; and thus if any sender of letters becomes also a passenger per steam vessel, he will save the entire expense of this outfit, and so lay up a sum of money amply sufficient to defray the postage of all the letters he is likely to forward or receive during the two years for which postage is sought to be made payable; the public as well as the State will thus be able to enjoy the benefits of our establishment gratis.

In the third place, referring to the plan mentioned in the Prospectus for preserving the letters from possibility of receiving or communicating infection during transit, I stand ready to submit the details of the same for the examination and decision of any scientific or practical committee your Excellency may name to report upon it. Lastly, it has been the object of myself, and those associated with me, to make these our plans as perfect, as extensively useful, and withal as cheap as possible; by such means we look for that decided support from Government and individuals which alone is wanted to give a permanency and a success to our concern. If your Excellency will do us the honour to patronize the undertaking, and on the sum of the many advantages we shall secure to all ranks and interests, public and private in India, to grant our request, we would wish to signalize and mark the era in which so vast a change has been permitted to be wrought in the commercial and social relations of England and India, by soliciting your Excellency's gracious authority and sanction to our naming our establishment "The Malcolm Line of Steam Packets," thus enabling us to point out to the world the master-mind and munificent fostering patronage of that individual to whom India will thus have become indebted for what may fearlessly be pronounced the greatest boon ever sought to be conferred upon her.

I have, &c.

Bombay, March 21, 1830. (signed) *J. W. Taylor.*

(21.) Letter from Mr. J. W. Taylor to the Bombay Government; 30 March 1830.

(21.)—LETTER from Mr. *J. W. Taylor* to Sir *Sidney Beckwith*, Vice President in Council at *Bombay*, dated Bombay, 30 March 1830.

Honourable Sir,

IN conformity with the permission which your Excellency was pleased to honour me with yesterday, I now beg leave to submit a modified proposition of the terms on which it will still be practicable to enter on an immediate commencement of operations with the establishment of steam vessels, which I have already had the honour to bring under the notice of Government.

Your Excellency will perceive in the proposition as now submitted a material alteration in the terms of our original offer, an alteration which I respectfully hope may bring the whole arrangement so entirely within the views of Government expediency as to lead to their approving and adopting its conditions, subject only to confirmation of the Honourable Court of of Directors, which confirmation, under a strong and distinct expression of the sense which Government may entertain of the general eligibility of the measure, and of the great advantages promised to the State and community thereby, I feel satisfied the Honourable Court would not be slow in acceding.

I beg also respectfully to state that if Government honour me by deciding on my proposal before the 10th of the coming month, I pledge myself to be in England in 70 days thereafter.

I have, &c.
(signed) *J. W. Taylor.*

With reference to the proposition which Mr. Taylor has already had the honour of submitting for the approbation of the Right honourable the Governor in Council relative to the immediate establishment of an extensive and regular steam communication with England, he has been given to understand that difficulties may possibly arise rendering it inexpedient for Government to assent to the terms submitted, and that however favourably it might feel disposed towards the proposal generally, or however strong might be its wish and desire to see such a rapid and regular mode of intercourse with England set on foot in the manner proposed, even under support from Government, an indirect period might possibly be put to the negociations, unless some modification of terms more consonant with the views of Government as to the question could be reconciled with the interests and outlay of the proprietors of the steam vessels.

It being Mr. Taylor's object, and he may say his interest, to make his proposals as acceptable to Government as he can, reference being had to the said outlay, he has reconsidered his original proposition, and now ventures to submit to the Right honourable the Governor in Council a new arrangement, which he hopes will be found divested of all previous objections, resting on data which Government can consistently admit, and leading to a line of conduct which Government may, with propriety, adopt.

The result of Mr. Taylor's inquiries in Bombay as to the state of the public feeling in respect to the rate of steam postage fixed by Government for their armed steam packets, leads him to be of opinion that it would generally be paid with readiness in a case when, like the present, steam power would be available to forward the letter all the way to England and back, and therefore that a very considerable proportion of the correspondence of the public would be confided to this more rapid mode of conveying it. The mercantile part of the community, whose letters are of most importance, would, it is evident, from a strong sense of interest, be compelled almost always to send their letters by steam; because the quicker transmission to be expected from this mode of conveyance would place those who did not use the opportunity in a situation very much more disadvantageous in respect to their mercantile advices and operations than they who did; the non-mercantile public may well be supposed to feel a greater desire to write by that conveyance which would generally bring them an answer to a letter sent in less time than by the ordinary route would be requisite to convey the letter itself, while Government would derive an incalculable advantage in the greater rapidity and regularity of their advices from the seat of controlling authority at home; as well as in greater proximity which such a line of steam packets would establish for India, to the power and protection of the mother country.

Arguing on the operation of these various causes to induce a general preference in India of the steam packet for conveyance of letters over the sailing vessels, Mr. Taylor ventures to imagine that he will not be considered to have formed an over-sanguine estimate of the amount of letters that will annually pass by steam out of the whole Europe correspondence of India, in fixing it at one-third of what now annually passes round the Cape of Good Hope on sailing vessels; he trusts therefore that the accuracy of this hypothesis will be so far admitted by the Government as to induce them to agree to found thereon the measures which Mr. Taylor respectfully submits for adoption.

Under a belief that Government must naturally wish to see a well-organized steam communication set on foot, and that it is disposed to give it a proper degree of encouragement, Mr. Taylor would respectfully propose that the Bombay Government should do him the honour of making him the bearer of a special dispatch to the Honourable Court of Directors, wherein mention should be made of his proposals to organize the establishment of steam vessels already submitted, adding that Government were so far fully convinced of the incalculable advantage flowing to India, and the services generally, from the operation of such a rapid mode of intercourse, and were also so entirely satisfied of the strong support it would receive from all classes in India, that they strongly recommended Mr. Taylor's proposals for adoption by the Court; the said proposals being, that all his former intentions relative to the arrivals and departures twice a month, to the carrying the packets and passengers, to the price of passages, should be adhered to, together with that of the maintenance of an extra packet; but, that the Bombay Government, as a reward to the proprietors for their risk and outlay in the concern, should be permitted, by the Court, to give these steam vessels the right of receiving on all letters entrusted to them by the public for dispatch in India, or brought by them from England, for the term of five years immediately following their commencing to run, the rates now fixed by the Honourable Company's armed steam packets, it being understood that Government are allowed by the Court to add a guarantee, that such aggregate of letters so to be carried and paid for shall amount annually to one-third of the present average of the total correspondence of all India per the sailing vessel.

This being done, and the executive authorities in Bombay consenting to express in clear and distinct terms their conviction that such a guarantee may be safely given, or, in other

(21.) Letter from Mr. J. W. Taylor to the Bombay Government; 30 March 1830.

words, that in their opinion the annual number of letters transmitted by steam would not fall short of the one-third assumed; and that a strong and decided feeling in favour of supporting such an undertaking existed throughout India, both with the governments and communities. Mr. Taylor will immediately go to England for the purpose of immediately setting the establishment on foot on the scale and basis as now proposed, and he will engage to have his first steam vessel at sea on her way to India, being duly followed by the others, within 21 days of his being honoured with the acquiescence of the Court of Directors in the proposals now respectfully submitted for them to sanction, which sanction, under the operation of the powerful steam authorities with whom he is now so happy as to be associated in England, Mr. Taylor nothing doubts of obtaining, if the Government view of the question be but as clearly and strongly expressed as it has been herein suggested that it might be.

It is of course expected, if anything be done under this proposition, that the aid of the Mofussil post offices will be accorded in the collection of the steam postage, and in transmission of the letters sent in not in any way interfering with that leviable on inland carriage. If a reply be given before the 15th of April, and such reply should be of a nature to induce Mr. Taylor to start for England, he would engage to run a steamer, in concert with the Hugh Lindsay, on the Mediterranean sea by the 15th of July next, such being a temporary measure till the regular steam vessels can reach their respective destinations on the Suez side of the Isthmus, and so commence on their duties with greater certainty of regularity in their proceedings.

Bombay, 3 March 1830. (signed) *J. W. Taylor.*

(22.) Letter from Mr. J. W. Taylor to Secretary to Bombay Government; 3 April 1830.

(22.)—LETTER from Mr. *J. W. Taylor* to *J. P. Willoughby*, Esq., Secretary to the Bombay Government, dated Bombay, 3d April 1830.

Sir,

I have already had the honour to bring under the notice of the Right honourable the Governor in Council certain proposals for the immediate establishment of an extensive line of communication between England and India, by means of steam vessels periodically leaving both countries.

In an interview with the Honourable the Governor with which I was yesterday honoured, and at which the chief secretary, Mr. Norris, was present, the above proposals were fully discussed, and I was desired immediately to forward to you a schedule of a new arrangement, the conditions of which should be based on the understanding had at the above interview.

In conformity with such command I now do myself the honour to hand you the inclosed written Memorandum, in which I believe the Honourable the Governor will recognize a due preservation of the exact spirit of the conversation that so passed between us.

Considerations connected with the rapid wane of the favourable seasons for passing expeditiously to Europe *viâ* the Red Sea, render it expedient, if a commencement of operations this year is desired by Government, that I should be able to leave Bombay for England as quickly as possible, and as, if honoured with a prompt decision in the case, I should myself be ready in a few days, I respectfully solicit the favour of your submitting this paper to the Governor in Council with as little delay as possible.

I have, &c.
(signed) *J. W. Taylor.*

MEMORANDUM of Mr. *Taylor's* Proposals to Government for the Carriage of the Public Mails to *England* and back on Steam Packets, going twice in every Month.

The number of letters which pass annually round the Cape of Good Hope on sailing vessels, but on which no sea postage is payable, has amounted as under:

From Bengal out and home	1,38,673
– Madras —	92,134
– Bombay —	63,400
	2,94,107

or say three lacs of letters. The above information for Madras and Bengal rests on the authority of the respective postmasters-general of those places; that for Bombay has been taken on an assumption that this presidency dispatches and receives annually one-third fewer letters than Madras.

By the Government armed steam vessels, Government have lately carried letters, and have charged thereon certain rates of steam postage, in addition to the inland rates, which have both been cheerfully paid by the public, although, under the arrangements made by Government, the letters so sent could only be forwarded by steam as far as Cosseir or Suez, the further progress of the packets to England being determined by the best ability of the Consul-general at Alexandria, Mr. Barker.

The readiness shown by the public to avail itself of the opportunity of so limited a system of steam carriage, as evinced in the numbers of letters sent by the Hugh Lindsay and Thetis, affords a fair presumption that a decided preference would be given to an establishment

Appendix, No. 25.

Steam Communication with India, and on the Rivers of India.

establishment of steam vessels going regularly and carrying the letters by steam all the way to England.

At the above rates of postage it is assumed that at least two-fifths of the total annual number of letters going on sailing vessels round the Cape of Good Hope, and not subject to any postage, would at least be annually sent on the steam packet, though bearing the rate paid for those forwarded per Hugh Lindsay and Thetis; at this rate of calculation and payment, the annual revenue thus accruing would amount to rupees 4,80,000; it might amount to a much larger annual sum.

It is proposed to Government to avail itself of the services of the establishment of steam vessels already brought under its notice by Mr. Taylor, employing them as carriers of letters merely; all details as to dispatch and receipt of the letters, as to the collection of postage, and rates to be levied from the public, being left wholly to Government; the carriers engaging to start twice a month regularly, both from London and India, to deliver their boxes of letters without fail in 65 days, subject to a penalty of so much per cent. on the hire for every 10 days in excess of 65 days, which may be consumed in the passage out or home; (65 days being expected to be the maximum length of passage, the amount of penalty is left to Government to fix;) and to have a steam vessel constantly ready to start on seven days' notice with dispatches, should a sudden and emergent occasion arise for their being forwarded with particular celerity to England, Government in such case being entitled to the services of the vessel, machinery, officers and crew gratis, only paying the extra expenses of boats, pilot and port charge actually caused by the extra trip.

For the performance of the above service on the above scale, a monthly hire of rupees 35,000 is to be paid month by month, the said hire to commence as soon as five steam vessels of about 500 tons burthen and 120-horse power each, have reached India, fully fitted and equipped, in readiness to ply on the Indian side of the Isthmus of Suez, in concert with four others of similar size and engine power, intended to preserve the line of communication on the European side of the said isthmus.

It is further stipulated that in the event of the public yielding a hearty and decided support to this establishment, and of their letters being so freely sent by those steam packets as to produce an annual revenue to Government exceeding the sum of rupees 4,80,000, at which it has been assumed, all excess above that annual sum is to be equally divided between Government and the steam-packet concern.

The above engagement to last for five years certain, and not then to be determinable without one year's previous notice.

(24.) Letter from Postmaster-general to Secretary to Bombay Government; April 1830.

(24.)—LETTER from the Postmaster-general at *Bombay* to *J. P. Willoughby*, Esq., Acting Secretary to Government, dated April 1830.

Sir,

IN obedience to the orders conveyed to me by your letter of the 10th instant, I have the honour to enclose you a Statement of the actual amount of postage received on letters dispatched to England *viâ* the Red Sea.

2. I beg to inform you that no letters were withdrawn from this office in consequence of the Enterprize not proceeding to her destination. All that had been received to be transmitted by her were dispatched on the Thetis, though I have no doubt a much greater number

(24.) Letter from Postmaster-general to Secretary to Bombay Government; April 1830.

number woud have been received for transmission, had not a sailing vessel been substituted in her stead. The date of the departure of the Hugh Lindsay was not known in time to enable persons residing at distant stations to send letters by her: this is the cause of the small number sent by her.

3. Supposing that a steamer were to leave Bombay with packets for England every three months, I am humbly of opinion that these packets would not contain fewer than 1,500 letters, the postage on which might amount to 7,000 or 8,000 rupees, as several of them would be double and treble letters. This calculation is made on the supposition that the steamers left at stated periods, and that these periods were known all over India.

I have, &c.

(signed) *J. Bourchier,* Postmaster-general.

STATEMENT of POSTAGE collected on Letters transmitted to *England* by the overland Mails:

(25.) Extract Public Letter from Bombay; 23 June 1830.

* 1830: Gen. Cons. 14 April, Nos. 17 to 27; 21 April, Nos. 69 & 70.

(25.)—EXTRACT PUBLIC LETTER from *Bombay*, dated 23d June 1830.

5. WE beg to bring to your Honourable Court's notice the Report of Mr. Waghorn, of the Bengal pilot service, connected with his voyage overland, *viâ* the Red Sea, from England to Bombay*.

6. Being of opinion that he evinced great zeal and activity in the performance of his journey to Suez, and subsequently, when disappointed of a steam vessel, by proceeding in an open boat to Judda, and considering him entitled to be remunerated for his actual expenses in effecting this journey, in consequence of his being the bearer of dispatches for the Supreme Government, we have sanctioned the payment of his bill of expenses, amounting to 320*l.* 1*s.*

7. We have referred Mr. Waghorn to the Supreme Government for any further consideration he may conceive himself entitled to, either on account of this service or for his continued efforts to promote a communication by steam between Calcutta and England.

(26.) Extract Letter from Mr. Waghorn to Sir C. Malcolm; March 1830.

(26.)—EXTRACT LETTER from Mr. *Waghorn*, of the *Bengal* Pilot Service, to Sir *Charles Malcolm*, Superintendant of the *Indian* Navy, dated March 1830.

I HAVE the honour to report (for the information of the Honourable the Governor in Council) my arrival here with dispatches *viâ* Red Sea, leaving England 29th October 1829.

Also, the motive that induced me to this journey, viz. a wish to meet the experiment that was intended by the steamer "Enterprize," at Suez, likewise to promote steam navigation with England and India.

I am positive, had the steamer been at Suez on my arrival, the communication between London and Bombay would have been effected by my landing at Bombay in 57 days, all stoppages included by land and sea.

I performed the journey of 1,260 miles from London to Trieste in nine days and a half, and I confidently assert it was never done so quick before (posting), and the time lost being only 21 hours. My route (down the Adriatic and across the Mediterranean) to Alexandria was tedious, in a Spanish ship, who proved a bad sailer. I was 17 days; a steamer would have done it in 7 days. In Egypt I was induced to go by the Nile (from its Rosetta branch) to Cairo, although I was longer getting there.

I had a particular desire to judge of its capability for small steamers, and whether they would prove of any utility, &c. Experience on the Nile, added to the information I obtained, enables me to say they are of no service, from many obstacles; besides they are not required, for despatches can go by fast dromedaries

From Alexandria to Cairo in - - - - - - -	40 hours.
From Cairo to Suez - - - - - - - -	22 ditto.

From

From Alexandria to Suez - - - - - - - -	62 hours.
From Alexandria to Cairo - - - - - - - -	40 ditto.
From Cairo to Ginnah - - - - - - - -	75 ditto.
From Ginnah to Cosseir - - - - - - - -	35 ditto.
From Alexandria to Cosseir - - - - - - -	150 ditto.

N. B.—It is to be understood that a regular set of couriers and dromedaries are kept for this purpose. The Pacha's post from Alexandria to Cairo takes 30 hours only; 40 foot messengers run a certain distance in pairs till the whole is complete.

Not finding the steamer at Suez, I hired a native boat and sailed down the centre of the sea, expecting to meet her (waiting seven days at Cossier) on the way to Judda, and on my arrival there on the 23d December, I first heard that the steamer was not coming.

It is my opinion that steamers will soon be established on account of dispatch with India, more particularly on the other side the Isthmus. It was with the view of being of service to "any steam navigation with India" I have come the present route, and I have only to state my opinion as a sailor:

First, That the Red Sea is perfectly safe for steam vessels.

Secondly, The safety of travelling in Egypt, and the dispatch, is beyond most other countries; in fact, I should have no objection to ride from Alexandria to Suez on a donkey unattended, as far as safety is concerned.

Thirdly, I do not know any reason (if steamers were established at Alexandria to go either to Marseilles or Ancona) why the communication should not be at all times generally effected in 50 to 55 days.

(signed) *Thomas Waghorn.*

(28.)—REMARKS by Mr. *Bownter* on the *Persian Gulf* and *Red Sea,* as applicable to Steam Navigation, for the purpose of opening a speedy Communication with *England* and her Territories in the East, *viâ* the *Mediterranean,* dated 17th June 1830.

(28.) Remarks on the Persian Gulf and Red Sea as applicable to Steam Navigation.

THE first and most direct route that offers itself to the eye of the observer, is from Bombay to the Persian Gulf, and from thence up the Euphrates to Beer, crossing from thence to Alexandretta or Scanderoon by post, a distance of 120 miles.

The second, and most circuitous route is by the Red Sea to Cosseir, or Suez, crossing the Desert to the Nile, and descending down that river to Alexandretta.

That this scheme of opening a communication with England be carried thoroughly into execution, it is actually necessary the route should be open throughout the year, or otherwise it can never be of any permanent benefit to either country.

Therefore the primary object to be considered is this: to which of these seas have you the easiest access during the south-west monsoon?

(28.) Remarks on the Persian Gulf and Red Sea as applicable to Steam Navigation.

The decision is decidedly in favour of the Persian Gulf, from the following reasons: a vessel bound to the Red Sea in that season would not have the monsoon until she arrived in the longitude of Cape Gardafui, and one to the Persian Gulf until she passed to the westward of Cape Raselhad, which is about 500 miles nearer Bombay than Gardafui; a vessel for the Red Sea would likewise have the wind and sea directly against her, which would not be the case if bound to the Persian Gulf, it lying in a north-westerly direction from Bombay, and the Red Sea to south-west. Since Sir Charles Malcolm has commanded the Bombay marine, cruizers have annually made the direct passage to the Gulf of Persia during the strength of the monsoon, leaving Bombay in the early part of August. On the other hand, the direct passage to the Red Sea in this season has never been performed, and, in fact, I believe never been attempted. From the rough and violent weather I have experienced in two passages (southern) to the Persian Gulf, in the months of July and August, when off the Island of Socotra, I have great doubts whether a steamer of even great power would be able to force her way against these stupendous obstacles; at any rate she would tear herself to pieces, and rarely last two voyages.

I have been informed by several officers who have frequently made the same passage, that they have always experienced the same weather.

The south-west monsoon on and near the coast of India is, generally speaking, a constant succession of violent squalls, rain and stormy weather, occasionally having thunder and lightning. On the coast of Africa and Arabia it completely changes its nature; there it blows a strong steady gale, which occasions a very high sea, but no rain whatever, and fine clear weather; this weather extends upwards of 200 miles to the eastward of Socotra. The cruizers formerly never made the direct passage to the Gulf of Persia during the south-west monsoon, but lower down between the Maldives and Lacadives islands and the Malabar coast, crossed the equator, and proceeded to the southward until they fell in with the south-east trade-winds, which was generally in about six or seven degrees of south latitude; they then steered west to run down the longtitude, which having done, they recrossed the equator and steered north for Cape Raselhad, and it was always off the Red Sea they experienced the most severe weather throughout the passage; and I can say from my own experience the seas off this place in the south-west monsoon are very high indeed.

The navigation of the Persian Gulf along the Persian coast is open, free from danger, and well known, having been lately surveyed, and daily frequented in all parts by the Bombay cruizers, and offers every facility in stations to supply the vessels with coal and all other requisite stores and provisions.

During the winter months, that is, November, December, January, February and March, the winds are variable from north-west to south-east, occasionally blowing fresh, and lasting about three days, but generally you have pleasant breezes from these quarters, sometimes land and sea breezes. During these months with north-west winds you have fine clear weather; but dark rainy weather, with thunder and lightning, accompany a south-east wind. In April, May, June and July, the prevailing winds are from the north-west, sometimes fresh gales, lasting seldom longer than three days, but principally pleasant breezes, with a portion of light winds. In August, September and October, light, variable winds from all quarters, but principally from north-west, with light airs and calms, and extremely sultry weather. The north-westers blow with the greatest fury, and are most frequently to be met with off the Verdistan Bank; here vessels bound up the Gulf often find them very troublesome, from the high sea and southerly current that accompanies those breezes. But there is a channel between this shoal and the main land where a steamer of a light draught could pass through in smooth water. The Red Sea, on the contrary, is not known to European navigators; replete with dangers, and is likewise as notorious for the bad weather constantly experienced in it as from its numerous shoals. In the months of October, November, December, January, February, March and April, the prevailing winds are fresh gales from south-east that extend from Cape Gardafui to the island of Gebel Zehaje, situated about 120 miles above Mocha, and from Suez down to these islands north-west gales are just as constant, attended by a nasty, high, short, chopping cross sea, and clear weather; but you frequently have very violent squalls from north-west in the northern part of this sea. About once a month the north-west gales reach as far as the Straits of Babelmandel, but when this wind blows so fresh as to prevail against the south-east gales it is accompanied by cloudy weather and rain, lasting about three days, when the south-eastern sets in again with redoubled fury. In the months of May, June, July and August, the north-west winds extend from Suez to Cape Gardafui. I sailed in the Honourable Company's sloop of war Elphinstone from Bombay on the 23d October 1828, with despatches for the Red Sea, to be landed at Cosseir; we had pleasant north-east and northerly breezes and smooth water, until we passed Gardafui; we there got a fresh south-east breeze, and passed Mocha on the thirteenth day. This breeze carried us as high as Gebel Zehaje; from thence to Cosseir was a continual struggle against north-westers, where we arrived on the thirtieth day, which was considered a remarkably good passage, but our vessel was the fastest sailer in India. I am sure an ordinary sailing vessel would have been much longer making this passage if she had had the same winds. On attempting to beat down from Mocha to the Straits of Babelmandel against the south-east winds, on our return to India in January 1829, we sprung our fore and main yards, and were compelled to put back to fix them, and from their shattered state were obliged to wait for a north-wester to carry us out of the sea. Mocha Roads is sheltered from southerly winds, but entirely open to the north-west, and when this wind set in it blew with such violence, and so heavy a sea broke in upon us, that while waiting for the captain to come off from the shore, we parted from two chain cable anchors, and it was with the greatest danger and difficulty we succeeded in weighing the third anchor. There are two methods

pursued

pursued in navigating this sea; the body of the shoals lay principally along the line of both coasts, having deep narrow channels between them. The European vessels navigate the centre of the sea, to keep these dangers as far distant as possible, and of course meet with rough weather, high seas, and strong currents. Native vessels, to escape this, prefer navigating the inner channels, when they are obliged to anchor every night; they are so very numerous, and principally lying under water, it being utterly impracticable to take a vessel between these reefs in the night; the only guard you have in the day is the discoloured water and breakers when it blows fresh, the land not being in sight, the weather being so very hazy and thick in this sea. It is now being surveyed by two very intelligent officers of the Bombay marine, Captains Elwin and Mousley, which, when finished, will no doubt obviate a number of objections to the navigation of that sea, as it stands at present; but this is a very extensive undertaking, and must be the work of several years; but however minute the survey may be, there still remains one objection, the want of a guide to warn you when approaching danger, for the reefs are so very steep too that the deep-sea lead is not of the slightest use, consequently that sea, from the number of reefs in it, however well known, must still be navigated at night with extreme caution and circumspection, particularly in bad weather. Not so the Persian Gulf; the lead there is a faithful guide to you in all parts, and may be boldly navigated at all times, void of risk in the worst weather.

Muscat bears from Bombay nearly W N. W. about 850 miles, is a port belonging to a very ancient and faithful ally of ours, who would be happy to afford us any assistance in his power, and which offers every facility for receiving supplies from the shore, as a vessel can approach within a hundred yards of the beach, and what is a great desideratum, can be approached with the greatest safety at night-time; the shore is bold, high and free of danger, and the only guide required to enter it is a light in shore, or on board of one of the vessels in the cove: the Imaum, if supplied with a code of night signals, would cause his ships to answer and attend to signals made by vessels off the port. It is likewise in the direct route to the Persian Gulf, more than half the distance to Bussorah; it is not frequently visited by vessels bound up the Gulf, not from its being out of their way, but from the frequent light winds and calms found near the Arabian coast, which is all in favour of steamers. Taking Muscat as the first station, there is every facility that can be required, and not one objection can be made against it in a nautical point of view; the supplies here would likewise be safe against the attempts of any enemy to cut them off when at war with an European or American power A vessel that could steam nine miles an hour in smooth water and carry seven days' coals, would reach Muscat on the sixth day, that is allowing her to be propelled at the rate of seven miles the hour, which I am confident would be sufficient allowance for adverse winds, currents, and other local impediments she may meet with; also for any deviation from the true course that may take place in her navigation during the months of September, October, November, December, January, February, March, April and May; the winds at that season are from W. N. W. to N. E. a great portion of light winds and calms with smooth water; they would seldom be found to blow strong enough to make a sensible impression in the progress of a steamer. I have frequently made the passage during these months, therefore speak from experience. At Muscat, if assisted by boats and men, she would receive her coals, water and such other provisions as were required, and would be ready in the space of three hours to take her departure for Bushire, touching, if required, at Bassidore, the western extreme of the island of Kishen and the rendezvous of the squadron in the Persian Gulf, for the purpose of landing letters for the senior officer and the crews of the different vessels composing the squadron, or to land any officers or men she may have as passengers; it bears from Muscat N. W. 255 miles; allowing the same rate of sailing (which I am confident, from six years' experience I have had in this gulf, is sufficient allowance for steam navigation throughout the year), she would arrive at Bassidore on the second day, and it has the advantage of lying directly in the route to Bushire. From this place she proceeds to Bushire for the purpose of landing packets for the British resident there; it is also in her route, and bears from Bassidore about 300 miles N. W. by W. and by passing up the channel between the islands of Polior, Khemi, Inderabia, Busheah and the Persian coast, to avoid the north-westers, if blowing, also between the Verdistar bank and main land, if advisable (but this would not often be required) she would arrive off Bushire on the third day. This port is not adapted for a station to receive supplies, the vessel having to anchor three miles from the shore in the inner roads; consequently, in blowing weather, communication from the shore to the vessel for the purpose of transporting stores would be very tardy (but she would not require coals here). Bussorah is distant 200 miles, where she would arrive early on the second day, passing on her way the island of Karrack, celebrated for its fresh water, and offering every facility as a station to have stores placed, as you can approach near the beach, and with perfect safety at all times. This island belongs to the Sheik of Bushire, and is fortified, and consequently safe against the designs of an enemy; however, it would only be requisite to have coals here as a stand-by in case of an accident, as the vessel would pass it on the fifth day from Muscat. There is some little difficulty in finding the proper channel over the bar of the river at present, owing to the strong tides and want of landmarks, the coast not being in sight; but how easy this impediment would be removed by mooring a floating light in this channel! the river could then be entered and navigated as high as Bussorah by night-time, unless in very bad weather, and then only when there is no moonlight. Above Bussorah the river is not known to Europeans, I therefore cannot give a decisive opinion on the subject of its navigation; but from what I have seen of the river as high as Baghdad, and reasoning from analogy, I think 20 days from Bussorah would be ample time for the despatches to reach Alexandretta, 33 days from

Appendix, No. 25.

(28.) Remarks on the Persian Gulf and Red Sea as applicable to Steam Navigation.

their leaving Bombay; at Bussorah the despatches must be removed into small steamers of light draught of water, peculiarly adapted for river navigation. The passage from Bussorah to Beer, when once performed, can always be accurately calculated upon, which cannot be done in navigated or open sea. In my opinion the length of the passage will not be longer in the south-west monsoon; although a vessel may be one day longer in her passage to Muscat, she will recover that time in her way to Bussorah, for it is during the monsoon months light winds are so prevalent in the Persian Gulf. From eight years' experience I have had of the south-west monsoon, I am aware that a steamer would have little difficulty in making the passage throughout this season; for even during the very depth of the monsoon, which is the latter end of June, all July and August, there are frequently intervals of several very fine days, and immediately she passes Cape Raselhad, only distant 770 miles, she escapes the monsoon. For the last three years a vessel has left Bombay in the early part of August, and make the direct passage to the Gulf, getting out of the influence of the monsoon in about 11 days; this I advance as a strong support to my opinion, for this reason, the greatest impediment a steamer can meet with is from a high sea; the month of August being the centre of the monsoon, surely if the sea in this month is found so moderate as to admit of a vessel working with success against it, there can be little doubt of a steamer performing it in half the time. The passage down the Gulf would always be equally as expeditious, and more so during the monsoon.

Aden bears from Bombay, nearly west by south, about 1,040 miles, (double the distance to Muscat, and much out of the direct course): this must be the first station to have coals placed, and it certainly affords every facility at all seasons of the year, for you are completely sheltered from the south-east gales, in a bay on the north-west side of the Cape, and from the north-west on the south-east side of it. A steamer, supposing her to be propelled at the same rate as the one for the Persian Gulf, and which I think would be adequate allowance, she would arrive at Aden on the 11th day, during the months of October, November, December, January, February, March, April and May; in these months they would meet with pleasant breezes from N. E. to W. N. W., and smooth water until they rounded Cape Guardafui; there they would fall in with strong steady breezes from south-eastward, except the month of May, when they would have light winds and calms from Bombay to Cape Guardafui, when they would fall in with north-westers not very strong, it being too soon for them. At Aden, with proper assistance, they would receive their supplies very quick, and depart for Cosseir, entering the straits of Babelmandel with the same wind and weather. Unless we have a floating light, either at the entrance of the large or small straits, or a lighthouse on the island of Perim, which would be preferable for vessels either going to or coming from India, vessels coming through these straits in the night would be obliged to heave-to until daylight, thereby causing great delay. The next port is Cosseir, where of course she will land her packets, for by having a steamer lying on the Nile at Jenna (distant about 130 miles from Cosseir), they would be on the Mediterranean on their way to England before a vessel possibly could reach Suez, for it is in the sea of Suez the north-westers blow with all their fury through the year, particularly in the lower part: the straits at the entrance of this sea are likewise extremely dangerous, and, however well known, would never be entered at night time. Cosseir is more than 1,000 miles from Aden, consequently she would be off port on the 17th day from Bombay; allowing her the same rate of sailing, her dispatches would reach Jenna on the 20th day, and Alexandria on the 23d or 24th day from the date of their leaving Bombay, provided there was a steamer on the Nile ready to receive them; if not, they would be three or four days longer before they arrived in the Mediterranean sea. A vessel can easily obtain supplies at Cosseir, as you may approach near the beach, but it is only sheltered from the north-west winds; if easterly or southerly winds set in, the vessels are obliged to put to sea immediately, for the beach is so very steep you find no anchorage until you are close to it, and with these winds you have not room to ride or veer away cable. This is the least possible time the passage can be performed in (from Aden to Cosseir), making the same allowances I have for the Persian Gulf, and supposing the sea to be as easily navigated.

But I am convinced, from what I have myself experienced, and the information I have collected from officers who have frequently visited that sea at all seasons, that it is utterly impossible for a steamer of the greatest power to perform the journey in the allotted time; she may by chance succeed once or twice, but in my opinion it cannot by any means be depended upon as an average rate. The passage from Bombay to Aden, during the aforementioned months can always be relied upon; but from the obstacles she would find opposed to her passage up the Red Sea from Aden to Cosseir would delay her progress so much as to make it requisite to have Jedda as another station, where she would receive a fresh supply of coals: this port is not at all adapted to the purpose, for it cannot be entered at night time, from the numerous shoals that surround it in all directions. And if to avoid these impediments she navigated the inner channel between the shoals, she must inevitably anchor every night, which would infinitely counterbalance any other benefit that might be derived from this mode of proceeding. Everything taken into consideration, I think the despatches might go to and from Alexandria in 32 or 33 days during these months, when the sea is accurately surveyed; but I am also of opinion that it is utterly impracticable for steamers to make the direct passage to the Red Sea in the months of June, July, August, and early part of September, for, as I have before stated, the weather is so very boisterous off the Arabian coast that a steamer would not make head against it; and if she did, it would be so slow, and from the great distance she would have to run before getting out of the monsoon, it would be impossible to carry the quantity of coals required, for she must be larger in bulk and swim deeper, consequently the influence of her engine is less, and she is propelled at a much slower rate, for if you increase the power of the engine the

quantity

Appendix, No. 25.

Steam Communication with India, and on the Rivers of India.

quantity of coals consumed also increases. But supposing the passage to be made, I am confident it can never be done in the time that would make it of any utility in sending despatches to England by this route during the south-west monsoon; the vessels would likewise be so roughly handled, that Government would find it a very expensive concern.

From the above remarks the following conclusions may be drawn in favour of the route by the Persian Gulf, supposing the Euphrates to be navigable as high as Beer: viz.

1st. The communication is open throughout the year, which is not the case to the Red Sea.

2d. It only requires a vessel to carry seven days' coals, water, provisions, &c. accordingly, which certainly is a very great object, as her speed will be so much the greater.

3d. Independent of opening a communication with England, it also answers the same purpose to and from the British missions in Persia, Russia and Turkey, also with the senior officer commanding the squadron in the Persian Gulf, and the British resident at Bushire, scarcely going a mile out of her direct course.

4th. The great speed with which despatches would reach Bombay from England, owing to the velocity with which a steamer would come down the Euphrates having the stream in her favour; the greatest point is therefore fully attained, that of receiving earlier intelligence from the mother country regarding the state of European politics.

5th. The great advantage derived from one-third of the passage being river navigation.

6th. The great advantages this route has over the Red Sea, from the state of its navigation, and other local matters as mentioned in my remarks.

In the above calculation I have made what I conceive to be ample allowance for winds, weather, &c.; but I am confident the passages will be most frequently made in much less time, for it is a well-known fact the greatest cause of delay sailing vessels meet with in making the passages is from light winds in the Persian Gulf and boisterous weather in the Red Sea. All my remarks on the Persian Gulf are made from my own actual experience during six years cruizing in that sea.

Baghdad, 17 June 1830.

I have, &c.
(signed) *J. Bowater.*

(29.)—EXTRACT LETTER from Acting Commander *J. H. Wilson* to *Sir Charles Malcolm* Superintendant of the *Indian* Navy; dated May 29, 1830.

(29.) Extract Letter from Commander Wilson to Sir C. Malcolm; 29 May 1830.

I HAVE the honour to report the arrival of the Honourable Company's armed steam vessel under my command, having, in pursuance of my instructions, made the passage to and from Suez by steam, touching at the different ports to procure coals, &c., as directed.

On arriving at Aden, (on our way to Suez), an officer was immediately sent on shore with the letters and presents addressed to the Sultan, and with instructions to request that the coal might be sent off immediately; the officer shortly returned and stated that the Sultan was at Lahya, (a town a few hours journey inland), where he usually resided; the letters and packets had been dispatched to him, but the Sheikh of Aden said he could not deliver the coal without orders from the Sultan. On the morning after our arrival I was informed that the Sultan wished me to visit him at Lahya, "when every thing could be settled;" a letter which I had in the meantime received from Commander Pepper enabled me to understand what was meant by "every thing being settled." As I was not provided with the means of meeting these demands should they be repeated, I requested the Sheik to write to the Sultan that the Government would be much displeased with the detention of the vessel; and if there were any demands on account of coal, the better way would be to give me at once what was required to take the vessel to Judda, and on my return for the rest, in my way to Bombay, I would settle all accounts. On the next day the shipment of coals commenced, but two days had thus been lost, three more were occupied in getting on board sufficient to make the passage to Judda.

On arriving at Judda, the letters to the address of the agent (Hussain Aga) were delivered, and although every exertion was made on my part to hasten the shipment of coal, four days and a half passed in receiving sufficient to carry the vessel to Suez. As there is no want of boats or men at Judda, the loss of time in delivering coal must be in a great measure attributed to the agent being governor of the place, and as he would not take any part personally in the performance of that duty, it was left to a servant who felt little interest about the matter.

On reference to the abstract from the log, it will be seen that on our arrival at Suez, one-third of the time elapsed since our departure from Bombay had been occupied in receiving coal. This, together with the vessel not having steamed quite so fast as had been expected, made it too late in the season for me to visit Alexandria, to communicate with Mr. Barker, as directed in my orders, and as the matter was left discretional, I decided on not doing so, as the consequent detention would have prevented the Hugh Lindsay reaching Bombay before the strength of the monsoon, to which, deeply laden as she must be to make the passage, it would not have been prudent to expose her.

In obedience to my orders I wrote to the secretary at the India House, reporting the arrival of the Hugh Lindsay at Suez, enclosing a copy of the log, also a paper containing the result of my observation on the passage, a copy of which is herewith enclosed.

At Suez four days were occupied in receiving all the coal deposited there, about 100 tons, which done we left for Cosseir, it being necessary to take coal from thence, in order to have sufficient

Appendix, No. 25.

(29.) Letter from Commander Wilson to the Superintendant of the Bombay Marine; 29 May 1830.

sufficient to make the passage to Bombay; on the day of our departure from Suez, a packet was received from Cairo from his Excellency the commander-in-chief in the Mediterranean.

At this place two days and ten hours were occupied in receiving about 50 tons of coals, which, with that on board, was thought sufficient to last nine days; not considering it prudent to load the vessel deeply, as a hard north-wester might be experienced on the passage to Judda. At Cosseir about 50 tons of coal remain.

At Judda two gentlemen, Lieutenant Chester, of the Bengal army, and Mr. Babington, Madras civil service, applied for a passage to Bombay, and were received on board.

On arriving at Aden, I went immediately on shore to the Sheik, and requested him to commence shipping the coal as soon as possible, which he said he could not do before the next morning. I also requested him to inform the Sultan at Lahya, that I would pay the expenses incurred in shipping the coal on board the Hugh Lindsay, both now and on the former occasion; but that whatever demands there might be for expenses incurred in moving the coals from Back Bay to the town of Aden, when first landed there from the Buglahs, I would rather wish should be forwarded to Government by the Hugh Lindsay, as I did not feel authorized to pay them; the Sultan, I believe, acquiesced in this proposal, as the coal was immediately delivered, and I paid the expenses of shipping it on board the Hugh Lindsay.

At Aden we were detained five days and eighteen hours. This detention was not caused by the limited means the Sheik possessed to send off the coals only, but the weather was very unfavourable, having every day strong breezes, which prevented the boats from the shore getting to and from the vessel, without being towed by others.

On reference to the paper to the secretary at the India House, it will be seen I submitted it as my opinion that owing to the great delays in receiving coals at the different ports in the Red Sea, the communication would be best carried on by having only one depôt between Bombay and Suez, and a class of vessels whose consumption and stowage would admit of their carrying 15 days' coal.

At that station boats and men in abundance would be found to embark the coals, and as it would be under the charge of a private individual, whose interest it would be to exert himself in the performance of such duties as were required of him, it would be more speedily executed than at Aden and Judda, where it was in the hands of the governor, who, though professing every wish to forward the service, performed it in a dilatory manner. The only objection to Mocha is, that strong winds prevail there from the southward, from November till May; but this would be obviated, as vessels of the proposed class, drawing about 10 feet, could anchor well in, in a line between the north and south forts, where they would be sheltered and in smooth water. At Aden, on the contrary, the means of embarking the coal are very limited, which certainly might be remedied in some measure by sending flats from Bombay for that purpose; but then were the coals deposited in Back Bay as they should be, for the steamers to receive them without hindrance from the weather, that place is so far from the town, the Government must be at the expense of building godowns for it, and keeping up an establishment to take care of it when there, all of which might be avoided by having Mocha as a depôt. Another point to be considered is the great expense attending the purchase of coal at Bombay, and freight from thence to the Red Sea, as has been done in the present instance. I respectfully submit whether a great saving might not be effected by having the coal sent out from England direct to Mocha, arranging so that the vessels should always arrive at Mocha with the first of the south-west monsoon. From thence, having discharged the coal, they might return freight to Europe, which would enable them to carry the coal to the Red Sea at a moderate rate, as the voyage home would not be lost. Part of the coal thus conveyed to Mocha might, at the proper season, be sent up to Suez for the depôt there, the agent at Mocha performing that service on contract.

In the paper before mentioned (to the secretary at the India House), I proposed that vessels should proceed to Cosseir only, but having since visited that place, I am of opinion it is not well calculated for a coal depôt, as it is quite unsheltered from easterly and south-easterly winds, which would be experienced most in the season in which steam vessels would be running. I also in the same paper mentioned a report of coal being found in the mountains on the western side of the sea of Suez, which I have since discovered to have originated in a mistake of the natives, who have picked up pieces of bitumen on the sea-shore, and which they mistook for coal.

When the whole of the coal at Aden was on board, we had at least one day less than when we left Bombay. By the greatest care in using it, by wetting and returning the ashes, it has been made to last the trip, and on anchoring in this harbour we had about four hours left.

In conclusion, I have much gratification in stating that the Hugh Lindsay has made the passage to Suez and back without any accident whatever. Trifling repairs are required, but nothing but what can be done by the engineers on board, excepting one of the holding down bolts, carried away during the last north-wester experienced in the Red Sea, to replace which it will be necessary to haul the vessel into dock. The boilers require caulking, a new set of firebars are wanted, and also a set of new circles for the paddles.

Appendix, No. 25.

Steam Communication with India, and on the Rivers of India.

(30.)—PAPER sent by Commander *Wilson* to the Secretary to the Court of Directors, dated "The Hugh Lindsay," Roads, April 23, 1830.

THE Hugh Lindsay is of a beautiful model, an excellent sea boat, and steers well; her burden 411 tons. By the builder's plan her intended draught is 11 feet 6 inches, at which she would carry little more than five days' coal; having necessarily been laden far beyond that to perform the passage to the Red Sea, a fair estimate of her speed can hardly be formed. Starting as she did so heavily laden, trimming ballast could not be taken on board, and, as the great body of coal lay abaft the centre, when she lightened it was impossible to bring her into proper trim. Although the chain cables, the only things moveable of material weight, were got aft, she being thus deeply laden, or when not so, quite out of trim, it is not surprising that she has not exhibited greater speed.

On her arrival at Aden there remained only about six hours' coals, which shows her not calculated for the navigation up this sea, as in so long a passage a vessel should at least carry three days' coal extra to meet any unforeseen detention. Another objection to a vessel of her class is the expense her great consumption of coal must put the Honourable Company to.

It has been thought that if the stage from Bombay to the Red Sea could be divided, by establishing a depôt for coal either at Socotra or on the Arabian coast, somewhere about Cape Morebat, it would facilitate the communication; but I am inclined to think it would rather retard than expedite the object in view, both from the local disadvantages of the places which must be used where vessels cannot approach the shore near, and the dilatory manner in which the coal is delivered at Aden and Juddah, which shows the difficulty, or indeed impossibility, of inducing the Arabs or Turks to perform any engagement with the prompt celerity and punctuality so necessary in this case; further arrangements might possibly be made, by which the delivery of coal at the different depôts would be expedited; but it must be borne in mind that when all that is possible shall be done the coal can never be shipped with anything like the dispatch it is in England, where every aid which mechanical ingenuity and local facility affords, is available. For the above reasons I think the fewer depôts the better, and am of opinion that the communication with Suez would be best carried on in two stages, one from Bombay to Aden, and from thence to Suez direct; the expense attending several depôts would thus be saved, and much delay avoided.

I may here observe that every object in view in the overland communication would be equally well attained if the vessels went no higher than Cosseir, (as far as passengers are concerned the majority would prefer landing at that place), the route from thence affording an opportunity of visiting the remains of antiquity in Egypt; and the conveyance of despatches would be the same within 24 hours, as the time it would take a steam vessel to go up to Suez from the parallel of Cosseir would be equal, within 24 hours, to the additional time requisite for conveying despatches from Cosseir down the Nile to Cairo; thus the expense in consumption of coal on the passage to Suez would be saved, and but little, if any, time lost.

In conclusion I would submit, as my opinion, that the class of vessels fittest for the navigation of the Red Sea would be such as could be propelled by engines whose consumption should not exceed nine tons in the 24 hours, and which should carry 15 days' coal at that rate of consumption; and such vessels would, I am of opinion, be fully capable of performing the passage from Bombay to Cosseir or Suez in two stages, as before proposed.

It may be worthy of notice that I heard a report at Juddah that the hills composing what is called in the charts "The High Land of Zeile," situated on the western side of Suez, and distant from that place about 140 miles to the southward, produce coal in considerable quantities; if this be fact, it may be worthy of further investigation, as in case arrangements could be made with the Pacha of Egypt to convey coal to Suez for the use of our steamers, a great reduction might be made in the expense attending the steam navigation of the Red Sea.

Appendix, No. 25.

Steam Communication with India, and on the Rivers of India.

(31.)—LETTER from Sir *C. Malcolm*, Superintendant of the *Indian* Navy, to the *Bombay* Government, dated 23d August 1830.

Honourable Sirs,

1. IN reference to the last paragraph of Mr. Secretary Willoughby's letter, under-date the 9th June last, requesting my opinion upon the whole subject of steam communication, in reply, I have the honour to state that I have been thus long delayed in answering this order, as I felt that I could not do justice to so important a subject without the fullest inquiries to ascertain, with all the correctness possible, the state of the winds, weather and currents throughout the whole year between this and Suez, as well as the various ports which lay in that tract, with their capabilities of being used during the various seasons of the year with most advantage to steam navigation.

2. With regard to the class of vessels best fitted for this service, I have already fully stated my opinion in my letter of the 12th November 1829, and I continue to think that no class of steamer will be found better adapted to the proposed service, provided they can carry from 12 to 15 days' coal; with less, many difficulties will constantly occur, as has been already stated by Captain Wilson in his letter to Mr. Secretary Auber of the 22d of April last.

3. It being also of much importance that the establishment of these vessels should be on as reduced a scale as possible, to enable them to carry the greatest number of passengers, I would suggest it to be as below*. This establishment would in my opinion render them perfectly efficient for the duties of the packets, and when required for the purpose of war they would have an increased complement.

4. To keep up the communication from hence by steam with Suez, four steamers will be required, three of them only manned as one is supposed to be constantly under repair. The principal difficulty is the distance of the first station from Bombay to the Red Sea. In the S. W. monsoon from the 15th of May until the 20th of August, I conceive no steam vessel can go to the Red Sea, but I consider that with the experience of a few voyages, which will show the best stations for our coal depôts, vessels might return at all seasons, even when the N. E. monsoon is at its greatest height, by having depôts far enough to the northward. Commander Wilson, of the Honourable Company's steamer Hugh Lindsay, conceives Manilla near enough on his return (1,397 miles to Bombay) to take his final departure from, in the N. E. monsoon. I doubt this; but should we find it too far, we can have a depôt either at Cape Isolette, where there is a good harbour only 870 miles from Bombay, or at Zoor, 776 miles (near Rassalgate), where the chief is our friend. It may be useful here to remark that during the N. E. monsoon the weather all along the eastern coast of Arabia is very favourable to steam navigation, being moderate with frequent calms.

5. A good steam vessel leaving Bombay during the N. E. monsoon, which could carry 12 days' coal, would I think make certain of reaching Mocha, but if that should be found upon experience to be too great a distance (1,780 miles) there is Manilla, or a depôt might be formed, if necessary, on the south side of Socotra (which is only 1,200 miles), with a fair wind; but it is evident the fewer depôts the more rapid the passage will be and less the expense.

6. There seems to be doubts of the practicability, at all times during the N. E. monsoon, of getting the coals off from Mocha, as strong winds often blow right into the roadstead and create a very considerable and unpleasant swell: a hulk has been proposed; still the officers who have been frequently there say that there is no part of the anchorage where she could be moored, or where the steamer could be anchored, that is free enough from swell during those gales to allow of laden boats lying alongside of either, particularly the steamer, with safety. The remedy would be a shed on the island of Perim, or Babelmandel, in the harbour of that name, which is landlocked, and accessible at all times and seasons, as it is uninhabited; it would be necessary to get the Sultan of Senna to keep a guard there, which would be both cheaper

Appendix, No. 25.

(31.) Letter from the Superintendant of the Bombay Marine; 23 August 1830.

cheaper and better than keeping a guard of our own in such a hot desolate place. In short I see no difficulties that cannot easily be overcome by a short experience of the capacity of the vessels employed and the winds and seas they encounter.

7. Explanatory of the last paragraph I have enclosed a Synopsis of the winds, weather, currents, &c. &c. between this and Suez, which has been drawn up by the master of the Palinurus, under the correction of Commander Moresby of that ship, and has been examined by all the officers who possess local knowledge of those seas. I have also annexed a statement of the different distances, and a chart containing the coast of Arabia from Cape Isolette to the island of Perim, with the island of Socotra.

8. The number of vessels required would of course depend upon the communication that is to be kept up. The expense of each vessel for the trip (of three months) amounting to about (23,000) twenty-three thousand rupees, a sum which in my opinion would be defrayed by passengers and letters.

9. In order to keep the machinery of these vessels in a perfect state, as well as to render them immediate repairs when required, I think it would be absolutely necessary (as well as a saving to Government) to have an efficient officer with a knowledge of the construction and repairs of marine engines, as inspector of steam vessels; this officer would also have charge of the dock steam engine, the superintendence of which (by two of the Mint mechanics) costs the Government (400) four hundred rupees per mensem, a sum that would nearly defray the extra expense of the situation suggested.

10. I would also beg leave to suggest that the supply of coals should be the Llongennuh coal, and that it should be annually deposited at Mocha or Perim, whichever may be the head station, direct from Europe. The vessels leaving Europe from February till May would enable ships coming to this Presidency to take the coals at a very reasonable freight, as in being able to leave the Red Sea from June to September, they would have a quick passage to this port, and the coals might be conveyed by country craft from either of these ports to Suez or Cosseir.

11. I find also that efficient and intelligent engineers could be engaged through the medium of a respectable mercantile house at this Presidency at a much more moderate rate than those now employed, which under the present system forms a very heavy item in the expense of steam navigation; besides those men who have been sent, as well as those from Calcutta who draw such high wages, have been troublesome men, taking every advantage of our being dependent upon them; and it is of great consequence to render us as soon as possible independent of their insolence and caprice.

12. In order that your Honourable Board may have a comprehensive view of the case, I have herewith annexed a statement of the actual expense of one of those vessels, allowing for her consumption of coal for a voyage to Suez and back, with her other expenses for a period of three months, also an estimate of the building and equipment of one vessel of the class suggested, with the expense of her engines, founded upon creditable data.

Superintendant's Office,
Bombay,
23 August 1830.

I have, &c.
(signed) *Charles Malcolm*,
Superintendant.

SYNOPSIS of the WINDS, WEATHER, CURRENTS, &c. between *Bombay* and *Suez*, throughout the Year.

MONTH.	Winds and Weather, 1° off Bombay, from thence to Mocha.	Winds and Weather between Mocha and Cosseir.	Winds and Weather between Cosseir and Suez.	Currents between Bombay and the Red Sea.	Currents in the Red Sea.	REMARKS.
January	Pleasant land and sea breezes, extending 50 or 60 miles off shore, when N. E. winds to N. N. W. may be experienced from thence to the Straits of Babelmandel, moderate breezes from the N.E. when a southerly wind is experienced.	From Mocha to the 19th degree of latitude the winds are strong from the S., from thence to Cosseir frequent fresh north-westers and moderate southerly winds for two or three days. Fine pleasant weather.	Strong winds from N. W. and N. N. W., interrupted by occasional breezes from the southward, lasting two or three days.	Approaching Socotra the current sets S. W. running more to the westward on nearing the Straits of Babelmandel.	Generally setting to the southward, when N. W. winds prevail.	In Mocha Roads the fresh southerly winds cause a very high sea, which renders communication with the shore difficult. In Aden, Back Bay, Judda and Suez, fine weather and smooth water may be experienced. In crossing from India to the Red Sea a long swell may be expected from N. E.
February	Land and sea breezes generally as in January, but occasionally moderate north-westers blowing home to the Malabar coast as far as the Strait of Babelmandel, fine strong breezes from the E. N. E. and N. E., then the southerly winds prevail. Fine pleasant weather.	Strong N. W. and light southerly winds.	Same as in January	Same as in January	Same as in Jan.	Same as in January.
March	Land and sea breezes less regular than in February. Moderate breezes from the N. W. more prevalent. From Bombay to Mocha winds not so strong as in February; swell still continues.	Wind north-westerly, as strong as in February; little or no southerly wind.	Same as in January, with the exception of southerly winds being less frequent in the sea of Suez.	Same as in January	Same as in Jan.	Same as in January.
April	Variable weather, with moderate winds from N. W. to W., and occasional intervals of land and sea breezes; from thence to Mocha weather occasionally unsettled, winds extremely variable and blowing occasionally from every point. On the Arabian shores N. E. and easterly winds prevail as far as the Straits, then southerly winds.	Southerly winds, seldom extending beyond Gebel Too, while N. W. winds become more frequent between Juddah and Cosseir.	Same as in March	Current begins to incline to the N. E., near Socotra.	Same as in Jan.	Same as in January, but no swell.

(continued)

MONTH.	Winds and Weather, 1° off Bombay, from thence to Mocha.	Winds and Weather between Mocha and Cosseir.	Winds and Weather between Cosseir and Suez.	Currents between Bombay and the Red Sea.	Currents in the Red Sea.	REMARKS.
May	Cloudy unsettled weather, with breezes from west to N. W. towards the latter, and occasional squalls from the southward; from thence to Mocha westerly winds prevailing; near the Arabian shore more southerly. In the vicinity of Socotra variable winds prevail.	Winds variable, north-westers occurring more frequent between Juddah and Mocha. Between Juddah and Cosseir north-westerly winds most prevalent.	Wind strong from N. W. and N. N. W. interrupted occasionally by squalls from the S. E. of no long duration.	Between Socotra and the Arabian coast current sets to the northward and eastward.	Same as in Jan.	In Mocha Roads winds variable, and strong from the southward occasionally; at other times strong from the northward, causing a confused swell, with intervals of land and sea breezes. In Cosseir the wind blows at times strongly from the N.W. causing a constant swell, from the exposed state of the anchorage. Crossing from India little or no swell will be met with.
June	Squally from the N. W. and S. W. with heavy rains and cloudy weather, the monsoon generally commencing between the 6th and 16th; from thence to Mocha fresh gales from the W. S. W. and S. W. extending to the meridian of Guardafui, from thence moderate westerly winds prevail to the Straits, where light north-westerly airs are met with.	Near Mocha, land and sea breezes in the early part of the month, occasionally north-westers, with rain. Between Juddah and Cosseir north-westers prevail.	Same as in May	Near Socotra current sets strong to the eastward, and on the Bombay Bank when the monsoon has set in a northerly current will be experienced.	Same as in Jan.	Light northerly winds and sultry weather in Mocha Roads; at Juddah land and sea breezes when the north-westers are not blowing. A very high sea would be experienced in crossing from India, especially near Socotra.
July	Off Bombay, strong westerly winds and squally; beyond, strong gales from the W. S. W. and S. W. extending to the meridian of Guardafui; from thence westerly winds of moderate strength prevail as far as Babelmandel, when light north-westerly airs are met with.	North-westerly winds prevailing occasionally, strong southerly winds seldom blowing and of short duration.	North-westerly winds prevalent and blowing with great violence.	On the Bombay Bank a southerly set is experienced; between the Arabian coast and Socotra are strong and variable, shift suddenly and run 50 or 60 miles per day.	Variable and partial, generally governed by the turns of the coasts, and generally setting to the southward, when north-westerly winds prevail.	At Mocha land and sea breezes prevail when the weather is settled. Crossing from the Red Sea a high sea would be experienced.
August	Moderate breeze and cloudy, squalls less frequent near Bombay. Between Bombay and Mocha the same as in July, with the exception of the wind being more moderate.	Near Mocha variable winds, towards Cosseir northerly winds generally met with.	Same as in July	On the Bombay Bank the current the same as in July; between the Arabian coasts and Socotra the current sets to the northward and N. E.	Same as in July	At Mocha the winds and weather the same as in July, and at Cosseir and Suez north-westers still prevailing; at Juddah fine pleasant weather, occasionally interrupted by north-westers; crossing from India a high sea may be expected, especially at the mouth of the Arabian Gulf.

II.
FINANCE (Trade).
Appendix, No. 25.
Steam Communication with India, and on the Rivers of India.

September	Winds variable from the westward, sometimes light airs from N. E. near Bombay. From Bombay to Mocha for the most part westerly, with occasional squalls from the W. S. W. and N. W.	Variable winds with occasional breezes from the N. W. lasting many days.	Weather more variable than in July.	Variable	Same as in July	At Mocha light southerly winds prevail, with sultry oppressive weather and smooth water; crossing from India, in the early part, a westerly swell will be met with; little or no sea at the latter part of the month.
October	N. E. winds extend about 40 or 50 miles from the coast of India, when the E. N. E. winds are prevalent; from thence to Mocha moderate winds from N. E. extending as far as the Arabian coast, when it changes to E. S. E. and S. E.; at the entrance of the Straits a south wind will be met and unsettled weather.	Southerly winds now set in near Mocha, and at times near Cosire, at the latter place north-westers still prevail, at times strong and lasting several days.	Moderate from the northward; weather unsettled.	Variable	Same as in July	Crossing from India, no sea will be encountered; at Mocha light winds and sultry weather.
November	North-westerly winds prevalent off the coast of India, from thence to Mocha E. N. E. and N. E. winds will be experienced. At the entrance of the Straits a southerly or south-easterly wind will be experienced, with unsettled hazy weather.	Southerly winds prevail near Mocha, and very frequently at Cosire, though light; at the latter place north-westers likewise prevalent at Cosire, sometimes strong.	Same as in October	Approaching the Red Sea the current now sets S. W. and W.	Same as in July	Southerly winds now set in at Mocha, and more frequent at Juddah, Cosseir and Suez. In crossing from India no sea will be experienced.
December	Land and sea breezes extend about 50 miles, when N. E. to N. N. W. winds may be experienced, the N. E. monsoon now being set in; from thence to Mocha, the same as in January.	From Mocha, to the 18th of latitude, southerly winds prevail, and are more frequent in the northern parts of the sea of Suez, lasting from two to five days, sometimes blowing fresh above that degree.	Variable and unsettled	Same as in November, the westerly current near the Red Sea increasing in strength.	Same as in July	Fresh southerly winds, with a heavy swell in Mocha Roads; pleasant cold weather at Cosseir and Suez. Crossing from India little sea will be encountered.

Appendix, No. 25.

Steam Communication with India, and on the Rivers of India.

(32.)—LETTER from the *Bombay* Government to the Court of Directors, (Marine Department) dated July 25, 1831.

Honourable Sirs,

WE have the honour of transmitting to your Honourable Court the accompanying copy of a Minute recorded by our Right honourable the President on the subject of steam navigation, and to inform your Honourable Court that his Lordship's propositions have met with our concurrence, and the necessary measures will be taken for dispatching the Hugh Lindsay to the Red Sea by the 1st of January next.

We have, &c.

(signed) *John Romer.*
W. Newnham.
James Sutherland.

(33.)—MINUTE of Earl *Clare*, Governor of *Bombay*, subscribed to by the Board, dated 14th July 1831.

(33.) Minute of Governor of Bombay; 14 July 1831.

IT would not be, I think, advisable to keep up the Hugh Lindsay steamer as a vessel of war, and the number of officers and men which she will require for her voyages to the Red Sea and back should be left to the Superintendent of the Indian navy to settle and report to Government, bearing in mind the necessity of reducing the expense of the steam vessel as low as possible, without any injury to her efficiency. I do not think it would be at present desirable, as we are ignorant of the intention of the Court of Directors, to have a complement of officers sent on board the Hugh Lindsay with a view of training them in that vessel to a knowledge of managing steam vessels. In the first place the fewer officers and men the Hugh Lindsay has, the better, for she has but little accommodation, and if, as I hope, the Court shall decide hereafter to have a regular communication between this country and Europe by means of steam vessels, I have no doubt of our being able to select from the Indian navy as many experienced officers as we shall require for that important branch of the service; in the meantime it will be sufficient to keep only such a complement of officers and men on board the Hugh Lindsay as will enable her to make her passage with safety and expedition.

I propose that the Superintendent of the Indian navy shall be directed to have the Hugh Lindsay ready to leave Bombay for Suez on the 1st day of January 1832, and that she remain at Suez until the 10th day of February next, when she will start on her return to the Presidency; and I will state to the Board my reason for fixing those dates, and proceed to make a few observations, the result of my experience of the nature of the voyage from the Red Sea to Bombay during the winter months.

One of the great objects of a communication by steam with Europe is to receive early intelligence of the orders of the Court of Directors, and to send in return the answers of Government. It is notorious that vessels which leave England for India in November and December, rarely, if ever, reach their destination before the month of May, whereas the despatches which will I hope be forwarded by the Malta steam packet in December, will reach Alexandria before the end of January. The Consul-general will without delay forward them to Suez, and thus we shall receive them, as well as the latest news from Europe, by the second week in March, full two months earlier than we could in any way expect them, if sent round the Cape. I wrote long since to the Court and Board to inform them of my intentions, and I trust the arrangement will be satisfactory to my colleagues. I conceive that the 1st of January will be as good a time as any other for passengers proceeding from India overland to Europe, and we may probably receive answers to our despatches by the Hugh Lindsay by the last March China ship, but as there is one link unfortunately wanting in the chain, a communication by a steam packet between Alexandria and Malta, that must be necessarily an uncertain event.

The difficulty of getting out of the Red Sea very often during, and always after, the month of December, for the three first months of the year is considerable, as strong south winds prevail constantly in the months of January, February and March. The worst month in the year for a voyage down the Red Sea is the month of January; afterwards there is generally, during the Spring, a calm of a short duration, at which time a powerful steam vessel, like the Hugh Lindsay, by watching her opportunity, may make a good passage. From Suez to Juddah the north-west wind generally at that season prevails, and the steamer experiences but little interruption. From Juddah the difficulties increase, but, as I well know, they are not insurmountable. From Juddah the reefs extend southward as far as Hodeida, and with the assistance of the chart made by Captain Elivon, and having a pilot on board, the steamer, in the event of a prevalence of strong southerly winds, might either go in smooth water within the reefs, anchoring every night, or if the wind, though adverse, was moderate, she might beat down the sea against it; and below Hodeida, about 12 miles south, there is as fine shelter as is to be found in any bay in the world, at Ras Mazammel Bay. From this bay to Mocha is not above 80 miles, where again is excellent shelter, and, as the Board knows, Mocha is within 40 miles of the Straits of Babelmandel, so that with the experience already gained, with smooth water within the reefs, and these harbours to run into, in case of bad weather without, I have no doubt of a steam vessel with the powers of the Hugh Lindsay, making her passage with safety and expedition, even at the most unfavourable

Appendix, No. 25.

(33.) Minute of the Governor of Bombay; 14 July 1831.

unfavourable season of the year for getting out of the Red Sea. I have dwelt upon this part of the subject at some length because I am aware that an unfavourable impression may be conveyed as to the possibility of a certain return from the Red Sea by any steamer during the Winter months, in consequence of the last unfortunate voyage to Bombay of the Hugh Lindsay, but I have already stated to the Board that the delay in my arrival at Bombay solely arose from a want of a proper supply of coals.

The Superintendent of the Indian navy should be desired to take measures to send a supply of coals to the Arabian coast and to the Red Sea for the next voyage of the Hugh Lindsay at the opening of the ensuing fair season, and as the Benares will at that time leave this Presidency on her return, probably the vessels containing the coal might be placed under the orders of Captain Elivon, and the Superintendent should ascertain whether any and what part of the coal was purchased from a private merchant at Mocha last winter for the use of Government, and he should report what quantity of coal is now at Maculla and Juddah (I believe 80 tons at the former and 30 at the latter port), and what quantity he proposes sending, and to what ports, for the next voyage of the Hugh Lindsay.

I am led to hope that having given due notice in this country of the intended voyage of the Hugh Lindsay, and of the period of her return, and having done my best to let the same be known in England, that great numbers of letters will be sent by her, which, with her passengers, will defray a considerable part of the expense of the voyage. The object however of a ready and quick communication with Europe is one of so great importance, particularly at the present time, I must consider the expense of the voyage a matter of minor consideration; I feel it however to be my duty to do every thing in my power to reduce it as much as possible. That expense, at least in the article of fuel, would be considerably lessened if the supply of coal required was sent direct from England to Maculla, from which port the quantity required might be sent without difficulty, and at little cost, in the bungalows of the country to the different ports in the Red Sea, and I certainly wish to call the attention of the Court of Directors to this subject in the event of their deciding to send out more steam vessels to this country. I should inform the Board that finding the acting agent of the Company at Juddah in every respect an improper person to be employed, I took upon myself to appoint an Armenian merchant, by name Allim Yusef, in his place, of which I hope my colleagues will approve, and I have every reason to believe he will be supported by the Governor and other Turkish authorities of the place. We have not I believe any agent either at Cosseir or Suez; at both places, particularly the latter place, an accredited agent is really necessary, and before the next voyage of the Hugh Lindsay I propose appointing one, but before I do so I wish the secretary to let me know what is the amount of pay of the agent at Mocha, the only paid agent I believe of the Company in the Red Sea. Perhaps until the communication becomes more frequent it may for the present be sufficient to pay the several agents for their trouble each time the steam vessel touches at the different ports, and this mode of remuneration will be I think more economical than a fixed salary; and, together with the consideration which being agent to the Company gives to the individual who holds the situation, it will probably be sufficient for all the duties imposed upon him, but I am clearly of opinion that we should have accredited agents at Suez, Cosseir, Juddah and Mocha, and if the Court decides to make Maculla a depôt for coals, an agent there will be also wanted.

Dapoorie, 14 July 1831. (signed) *Clare.*

(34.) Letter from Secret Committee of the Court of Directors to Bombay Government; 18 June 1831.

(34.)—LETTER from the Secret Committee of the Court of Directors to the Governor in Council at *Bombay*, dated the 18th June 1831.

WE transmit to you for your information and guidance, copy of a letter which, on the 14th March last, we addressed to the Governor-general in Council, on the communication with India by the route of the Persian Gulf and the Red Sea.

Our wish and direction is, that you should inquire into the subject, and submit a minute report of the result of those inquiries to the Governor-general in Council, with the least practicable delay, transmitting to us at the same time a copy of such report for our information.

As it may be desirable that you should enter into communication with Mr. Farren, His Majesty's Consul-general for Syria, we shall transmit to him a copy of this despatch, in order that he may supply you with any additional information which he may obtain on his arrival at Damascus.

(35.) Extract Letter from Secret Committee to Bengal Government; 14 March 1831.

(35.)—EXTRACT LETTER from the Secret Committee of the Court of Directors to the Governor-general in Council at *Bengal*, dated 14th March 1831.

WE transmit to you, for your information, copy of a letter which we have received from the Right honourable Charles Grant, President of the Board of Commissioners for the Affairs of India, dated the 1st February last, together with its several enclosures, from Captain Chesney of the Royal Artillery, and Mr. Farren the Consul-general for Syria.

Our object in transmitting these papers to you is to put you in possession of the opinion of these individuals, in regard to the communication with India by the route of the Red Sea and the Persian Gulf.

(36.)—EXTRACT LETTER from the Right hon. *Charles Grant* to the Secret Committee of the Court of Directors, dated the 1st February 1831.

I HAVE the pleasure to enclose, for your information, copies of papers relating to the communication with India by the route of the Red Sea and the Persian Gulf.

The first is by Captain Chesney of the Royal Artillery, and enters into an examination of the difficulties in the way of a communication with India by way of the Red Sea.

The other of these papers is by Mr. Farren, His Majesty's Consul-general for Syria, whom I have long known, and who is, I believe, perfectly competent, from his local knowledge to speak on the points to which he adverts, as it respects the advantage of communicating with India by the route of Damascus, Bussora, and the Persian Gulf.

(37.)—EXTRACT LETTER from Capt. *F. R. Chesney*, of the Royal Artillery, to the Right hon. Sir *Robert Gordon*, G. C. B., His Majesty's Ambassador to the *Ottoman Porte*, dated Jaffa, 2d September 1830.

(37.) Extract Letter from Capt. F. R. Chesney to the British Ambassador to the Ottoman Porte; 2 September 1830.

Sir,

I HAVE realised the intention communicated to your Excellency in my letter from Cairo, dated 7th June, of visiting Suez, Lake Menzaleh, &c. and also sailing down the Red Sea to Cosseir, from whence I crossed the Desert to the Nile; endeavouring to ascertain, during these journies, what impediments and facilities exist with regard to a steam communication with India by one of these routes.

It is with some degree of hesitation that I venture to touch upon a subject so foreign to my profession, and attended with some difficulties, but steam navigation is undoubtedly less complicated than that of sailing vessels; and its extension to more distant countries has long interested me; indeed so much as 10 years ago I made some calculations as to the feasibility of the communication with India through Egypt and the Mediterranean, leaving the mails at Gibraltar, Malta and perhaps Cape Matapan, (for Greece, &c.), and although I did not bring the subject forward, the consideration of the question naturally prepared my mind for the local examination just completed; the result of which I shall proceed to give, trusting that your Excellency will bear in mind that I am not a nautical man, and therefore have a claim to allowances for any errors which may arise from this cause, particularly as I hope they will not be so serious as to mislead any one in considering the grand question itself.

The Red Sea offers serious difficulties to the navigation of sailing vessels; its western side is shallow (owing to coral rocks) and when the wind is not so favourable as to permit their keeping the Arabian shore on board, they are naturally exposed to much danger on the Egyptian side. During five months, beginning from the middle of May, the wind blows steadily and moderately down the Red Sea; during all this period vessels must beat up the Red Sea as far as they have to go; and as the Arabian navigators neither know the use of the compass or the bearing of the stars, they invariably come-to every night, consequently the voyages towards Suez would be exceedingly long if they were undertaken at this season of the year, when all navigation may be said to cease: for, if there be not the supposed time for the vessel to reach her destination early in May, she waits until the Autumn, when southerly winds give a speedy passage, and, with a fair wind, a safe one, through the deep water on the Asiatic side, where there is a space sufficiently broad and free from all obstructions.

It is evident that the foregoing difficulties do not apply to steam vessels, which can make a straight course at all times, and which could ascend the Red Sea against the moderate winds prevailing there, at the rate of six or seven knots per hour, when she is not impeded, for I apprehend that a violent gale of wind is a rare occurrence in that sea, and that the sequel would prove that a steam vessel (of moderate power) can ascend with much rapidity even at the most unfavourable moments; so that there remains but one serious difficulty—the coals—which could be overcome by forming a depôt at Mocha, Aden, or some other place in the Straits of Babelmandel, to which they could be transported in many ways; for instance, by Lake Menzaleh, and across the Isthmus on camels to Suez; or, up the Nile to Kenné and across to Cosseir, on camels, at a contracted rate of about 8 or 10 piastres for 9 or 10 cwt., and still cheaper were an establishment of those animals to be kept for this purpose, as the Pacha does, allowing only four piastres for each journey to the Arabs who feed, keep, and conduct the animal. The transport up the Nile is known to be exceedingly moderate, so would the subsequent part be, from Cosseir to Mocha; and in this way the depôt could speedily be formed at a moderate expense, unless it should prove still less to send the coals thither altogether by sea.

The necessary fuel, whether coals, charcoal, oil or wood, being placed near the Straits of Babelmandel, the next question is, how high in the Red Sea it would be most advisable that the steamer should ascend? Cosseir offers one route; the port is an open one, but perfectly safe, with sufficient water within 300 yards of the shore, and even within 100 or less, in some places, and from this place a Tartar on a dromedary can reach Alexandria in the course of 10 days, going through the Desert in a diagonal line all the way to Cairo (leaving the Nile at some distance on his left), and thence direct to Alexandria. Admitting that this is not an extreme case rather than a practicable one, it is evident that it can only apply to despatches; and that the officer carrying them, and passengers, would either take much more time or choose the easier route of crossing to Kenné, and descending the Nile, which would

Appendix, No. 25.

(37.) Extract Letter from Capt. F. R. Chesney to the British Ambassador to the Ottoman Porte; 2 September 1830.

would either separate the passengers, parcels, &c. from the mail and despatches, or involve the delay of the latter at Alexandria until the former could arrive; for which reason if the port of Cosseir were to be ultimately decided upon, it would be decidedly advisable to make the communication by the Nile (as far at least as Cairo) and endeavour to give every facility as to time, which this route is capable of.

Four dollars and a half only were asked for 11 camels, with their attendants, to take me from Cosseir to Kenné; three days and four nights were employed in this journey, 50 hours of which were consumed in actual travelling; the camels being rather heavily laden made but about three miles and a half per hour, owing partly to the heat from 100° to 112°, the last three days of June.

But with one station, and a relay of camels, placed in a valley midway, occupied by the Ababdi Arabs preparing charcoal, and where there is water, the journey from Cosseir to the Nile (with animals moderately laden) need not exceed 32 or 36 hours, including a short rest at changing, and supposing a boat to be quite ready, either at Kenné or Coptos (which is rather nearer the Red Sea) and to go down the Nile day and night, as mine did, for the sake of a present (against a contrary wind all the time), she would, at the same rate, reach Cairo in four days, and less than four (a Tartar takes 36 hours) would carry the party to Alexandria, making in all nine days, or nine days and a half, from Cosseir, and 12 in cases of some unforeseen delay.

Even these periods might be materially shortened by the use of a river-going steamer, such as those on the Clyde, some of which draw but 18 inches water, and one a good deal deeper (two feet and a half or three feet) could ascend and descend the Nile at all times to Rosetta, which is only six hours by the Desert from Alexandria; from Kenné to Rosetta is about 380 miles, and a vessel, going eight knots, would accomplish this upwards against the stream of two knots and a half in 70 hours, and downwards with the current in 42, making 50, including eight to go from Rosetta to Alexandria; so that the whole journey from Cosseir would be performed in 86 or 90 hours; and that from Alexandria to Cosseir in 114 or 116, with very little fatigue and no real difficulty: and with contracts and the necessary arrangements about coals, &c. the expense of the whole would be sufficiently moderate.

The next route that presents itself is that by Suez, which port the steamer would reach in about 25 hours more than she requires to go to Cosseir; there is safe anchorage and shelter within five miles of the town, and she cannot go higher until the sand is removed which chokes the passage up to the town, where there is but a depth of seven or eight feet water only.

The subsequent difficulties in crossing the Isthmus and embarking are greater than those attending the port of Alexandria, but were they once overcome the route of Suez would be still quicker; before, however, I enter more into its details, it will be necessary to endeavour to describe the situation of Damietta and the adjacent coast, with the impediments in embarking, &c.

Damietta is on the right bank of the eastern branch of the Nile, and about eight miles from its mouth, where there is a bar of about 150 yards long, having rather less than four feet water when the stream is at the lowest, and seven feet and a half when at the highest, formed by the deposit of the river from time immemorial, without any efforts to remove this serious impediment, which obliges all vessels to take in, and discharge their cargoes outside of the river, where they anchor in moderately safe ground, the goods being transported in germs (a sort of lighter) which passes constantly to and from Damietta, the rest of the river, inside the bar, being sufficiently deep. In bad weather the vessels run from the river's mouth to a bay formed by a point of land north-east of the Nile, distant about four miles; this anchorage, called Tachtarass in Arabic, and Caubroo in Italian, gives sufficient water for large vessels between a mile and a half and three miles from the shore, where there is a considerable space, and smooth water for boats to communicate with the shore. It is exposed to the north-east, but vessels are considered safe at single anchor, and as no accidents are remembered, or at least spoken of, it may be concluded to be really secure; it is about eight miles from Damietta by land, chiefly along Lake Menzaleh, from which a part of this bay is separated by a narrow stripe of land, and through which there is an opening into the lake for boats, called Stano Souan, four or five feet deep.

Running about E. S. E. from Tachtarass, is the narrow sandy stripe of land separating Lake Menzaleh from the Sea, and through which are the passages Stano Souan (already mentioned) three miles from Tachtarass; that of Bohaz Dibeh, 10 or 12; the one of Stano Gemileh, about 15; and, finally, the ancient one of Tineh, 25 or 30 miles distant, now closed.

The lake begins about a mile and a half from Damietta; it is an irregular parallelogram, nearly 43 miles long (E. S. E. and W. N. W.) and varying from 17 to 20 broad N. E. by S. W. from the sea to the land side; the bottom is a mixture of mud and sand, generally covered with weeds, but quite level, the depth seldom varying more than six or eight inches, being rarely much under four feet, and seldom materially above it, except where the sea enters; there are a number of small grassy uninhabited islands in the lake through which the fishing boats pass with facility in all directions; they are very numerous, of a construction at once broad and sharp, so as to give speed with little draught of water, and yet carry a good deal, some more than 20 tons, the smaller 8 or 10. The fishermen live at the towns on the south-east border of the lake, viz. at Menzaleh, an hour from the lake, and on the canal from Mansoma; Matariah on the lake; Saan, two hours from the latter by a canal (joining them); and finally Tineh, a village constructed by the French (when they marched into Syria), it is a little eastward of the lake, within 200 yards of the sea, with anchorage in good weather, a couple of miles from the village; this is the nearest point to Suez, and would

Appendix, No. 25.

Steam Communication with India, and on the Rivers of India.

would be the most convenient if the French cut into the lake were to be re-opened, as it is but two days and a half, or 30 hours of pilgrim's travelling from that place.

The next shortest is that of Saan, now in use by the Mecca pilgrims: this village is two hours from the lake at Matariah, which it joins by a canal of three feet and a half or four feet water; down and up this the boats pass at all times to fish. A line drawn from Damietta to Suez would pass over about 35 miles of lake to Matariah, and thence through Saan (propelled by poles against the bottom when the wind fails) to the latter; and three days (36 hours travelling) thence to Suez; therefore, putting on one side the question of opening the bar at Damietta, there is the Bay of Tachtarass, where a steamer could await in safety, and supposing one station (giving one change of animals half way through the Desert), the journey from Suez to Saan would be accomplished in 24 or 28 hours at the most; and the subsequent part (by the lake) in a small steamer or fast-rowing boat, in 8 or 10 more, going not to Damietta but the western extremity of the lake, and at once to the vessel by the passage of Stano Souan, making about 56 or 62 hours from the latitude of Cosseir to the supposed place of embarkation in Tachtarass, whereas that by the Nile to Alexandria requires 86 or 96 hours.

Suez would also have an additional advantage in the facility of supplying the necessary fuel; the Arabs of the Isthmus, and those of Mount Sinai are easily dealt with, and would hail with joy anything like constant employment; a party of them who accompanied us to Suez afterwards followed empty to Mount Sinai, to obtain one day's employment at a very moderate rate; and judging by those expences, I have little doubt that coals could be transported across the Isthmus under 10 piastres for each camel carrying 8 or 10 cwt. (at the present exchange less than 2 *s.* 6 *d.*); so that unless some intrigues should be used at Alexandria, fuel could be transported across Lake Menzaleh, the Desert, and finally to Mocha at a very moderate rate, and that in sufficient quantity for the whole consumption; which will be much less than for the same distance of any other sea, simply because there is what may be called a trade-wind during a considerable portion of the year, down at one period, and up at the other, making it well worth while to unship the paddles to sail the whole length of the Red Sea, going at the rate of 8 or 10 knots without steam, in a nice breeze and smooth water, not offering any serious impediment or delay when contrary. The Arab junk hired to go to Cosseir made that voyage from Suez, 300 or 320 miles, in four short days, 37 hours in all, sailing.

In this view of the question there remains only one case where a difficulty might arise in the sequel, namely, if the roadstead of Tachtarass should prove less safe than I have ventured to state; but I believe it will be found sufficiently good to be adopted, unless that of Alexandria be ultimately preferred to it, and also the other sources near Damietta; one or both of which would in all human probability be available, and become still more advantageous.

The first is the removal of the obstruction at Damietta Bar by means of machinery; it is not considered a very difficult task, and the merchants would join in the undertaking.

The second is the improvement of the Bohaz, or Stano Gemileh, also opening that of Tineh, so as to communicate with Suez by the latter place, avoiding Damietta altogether; the passage of Gemileh is at times resorted to by small Syrian vessels for shelter in bad weather; it opens about N. N. E., is nearly half a mile long and 50 yards wide; the least depth I found exceeded 11 feet; but as I was beset by the Arabs, and met some annoyance, I cannot be quite positive that this is the lowest point in the inlet, though I believe it to be so, and that nearly at all times of the year; for, there is no fresh-water current to make a deposit, or the Bohaz must have been closed long ago. The land is low and sandy on each side of the entrance, and the surf moderate, owing to the opening lying towards the Syrian coast; once inside of the passage, the lake is met six feet deep, afterwards less.

I feel a very strong conviction (from the nature of the soil) this opening could be readily enlarged by the use of machinery, scraping the muddy bottom so as to admit a steamer, and that if once done it would long remain open; in addition to this operation, it is probable that it would be necessary to form a kind of small basin at the inside of the entrance, merely by driving a light range of piles, to keep out the deposits of the lake, and permit the vessel to remain afloat at all times: this place would then have two ways of communicating with Tineh, the one by sea, the other through the lake; and either would be accomplished with a fast boat in little more than three hours; so that from Suez to the steamer, or the reverse, would require but 27 hours, or 30 at the outside.

In the other opening to the westward, called Dibeh (with a castle erected by the French for its defence), I found but five or six feet water throughout nearly a mile in length and 100 yards in breadth; it seems to be capable of much improvement, but at a far greater expense than that of Gemileh, and when finished it would be more distant from Suez, &c.

If difficulties arise in the other quarter, there seems nothing more requisite to put the communication by Cosseir and the Nile into operation than the construction of a small river-going steamer, with five or six men, a good deal of spread on the water, and little depth; and to send the supply of fuel up the Nile in the common large boats, to be transported to Cosseir by the Arabs, from Kenné or Koptos; unless it should seem more advisable to purchase charcoal at Cosseir, whither it is brought some leagues by the Ababdi Arabs, and sold at the rate of eight or 12 piastres for a common sackful; so that whether coals be carried thither, or charcoal bought, the tribes in question would be equally interested in the continuance of this intercourse.

Any of these routes, however, which may be adopted, will probably only pave the way to the realization of the grand idea so long indulged in England, and other parts of Europe, of connecting the Mediterranean with the Red Sea; a little time will probably remove the ill-founded

Appendix, No. 25.

(37.) Extract Letter from Capt. F. R. Chesney to the British Ambassador to the Ottoman Porte; 2 September 1830.

founded apprehension of increasing the height of the former by the influx of the latter; for whatever natural cause can be supposed to exist likely to maintain the Red Sea at a higher level, can hardly fail to influence equally the Mediterranean, at the distance of little more than one degree: the land, it is true, shelves gradually from the Red Sea to the western shore of the Isthmus, at a mean difference of 18 feet, according to the French engineers, but it is very questionable that the sea itself is higher, communicating (as it does already) round Africa; but even if it could prove so, an additional inlet will no more increase the height of the Mediterranean than do the increasing and infinitely more voluminous ones from the Black Sea and Atlantic; the surplus is, and equally will be, disposed of by evaporation where seemingly greater, because the influx is literally regulated by the quantity exhaled, and, as I apprehend, can neither be more nor less, whether supplied though one or six inlets; on which principle the Mediterranean (when it shall communicate) would as readily give to the Red Sea as receive from it, were not the temperature of the latter, and the exhalation, lessened by the cool north winds during the heat of the year; therefore a moderate current may be expected to run from the Red Sea; but it is rather to be feared that this will not give a sufficient body of water to open a noble passage for ships of moderate burthen, than that any prejudicial increase should be the consequence to the shores of the Mediterranean.

As to the executive part there is but one opinion, viz. that there are no serious natural difficulties, not a mountain, scarcely what deserves to be called a hill; and in a country where labour can be had, without limit, and at a rate infinitely below that of any other part of the world, the expense would be a moderate one to a single nation, and scarcely worth dividing between the great family of Europe, who would all derive benefit from the measure; and were the Pacha heartily to consent, he could employ (as he did on the Mahomedan canal) 500,000 Arabs, feeding them out of his stores, and putting nearly all the contracted price into his coffers; he is fond of speculations, and this would be a grand one for the world at large, and a very productive one for his purse.

(38.) Letter from J. W. Farren, Esq. to Rt. hon. C. Grant; 26 January 1831.

(38.)—LETTER from *J. W. Farren*, Esq. His Majesty's Consul-general in *Syria*, to the Right honourable *Charles Grant*, President of the Board of Control, dated Holles-street, 26th January 1831.

My dear Sir,

Government having now directed its attention to Syria, and appointed me there with the commission and powers of British Consul-general, for the purpose of effecting that public measure of commercial interest which was first entertained and adopted, and under so many difficulties has been uniformly and zealously supported by you, I request your consideration to another subject it now opens, and which is of great importance to the East India Company, under a variety of circumstances, present and prospective—the shortest and most desirable channel of communication between this country and India.

It is unnecessary for me to make any lengthened remarks on the importance of this object; I will therefore only observe, that the present state and prospects of Europe, the affairs of India, and our interests in Persia and Central Asia, in relation to them, make it one of daily increasing solicitude.

Hitherto Syria has been without the pale of British regard and protection, and this object has therefore been sought through channels with which we were in political connexion: my appointment, however, over the whole of Syria (and, may I add, my local knowledge and acquaintance with the character, resources and customs of those countries) now present Syria to us under a new and practical point of view, as a medium of intercourse with India.

From Alexandria, in Egypt, despatches have to pass to Suez, where they are shipped, and the steam vessel proceeds down the Red Sea to India.

It is clear that the East India Company derive and cultivate no collateral interest whatever by this route. The passage of the Red Sea at seasons is dangerous; the countries which border it are uncivilized, unproductive and inhospitable, and in the whole passage to India not one object of political or commercial interest to the Company is combined with this course, and from all their affairs and correspondence in Persia and Central Asia, and their establishments at Bagdad, Bussora, and Bushire, they are as far removed as by the ordinary intercourse by sea. It is, in short, merely a medium for carrying despatches between India and England, sustained at an expense which is not at all lessened by any collateral advantage.

Now the despatches and letters, whether sent by the packet direct or from any Mediterranean port, would arrive equally as soon at Damascus as to Alexandria, and if by land, through Constantinople, would unquestionably arrive sooner by 12 days at least; as the country between Damascus and the desert that separates Egypt from Syria, is mountainous and broken. From Damascus to Bussora the Tartars go in 10, 12 and 14 days, and even less, and from Bussora to Bombay the sailing voyage is about a fortnight or 18 days.

The Tartars thus employed form a regular and a Government establishment, as the post of Turkey; they are provided with special firmans from Government; are invariably employed to carry the revenues of the pachalics to the Porte; are sent with large sums to the most distant parts by bankers, pachas and merchants, and carry all the despatches from the different Governments, and from the ambassadors and European authorities in the interior. The established European post from Smyrna to Constantinople, twice a month; and

and from Constantinople, under the Austrian embassy there through Vienna to Europe, is conducted by these Tartars without any idea of insecurity being entertained in respect to it by the merchants and residents in those parts. During the time I was in Turkey I never heard of any one of these Tartars being molested or impeded; and the necessary arrangements, understanding and security being made with the districts on the route from Damascus to Bussora, and a good personal feeling and proper influence and intercourse being sustained with them by myself, and in my official character, as well as the communication being recognized as belonging to and under the special protection of the British and East India Governments (as that at Constantinople is under the Austrian), I feel perfect confidence in the regularity and safety of their dispatch.

By this route, therefore, time would not only be gained, and the transmission of duplicates by land or sea combined in it with nearly equal advantage, but the East India Company would acquire a direction and control over the first and regular intercourse from Europe with Western Asia, and with the districts in its route, which is a point of some consideration; and what is also of infinite importance to the Company, and as such I strongly urge on your consideration, it takes up a line which draws in all our relations and interests in Persia, and embraces and facilitates the correspondence of our Indian Government, the Board of Control and the Directors, with each other, and with Tabreez, Teheran, Ispahan, Bagdad, Bussora and Bushire. It enables the Government here to acquire much earlier and more frequent information (and this is of vast consequenee) than by the other route, of all those political urgencies and occurrences which may call for immediate action, as well as of the proceedings of their agents in those parts. It opens new sources of general information respecting those countries, through the observation of travellers in the service of the Company, who would more commonly take that route. It is a course from which, when once familiarized to our ideas, lines of inquiry will strike off in various directions, through regions which invite our inquiry, and possess capabilities for repaying our commercial enterprise. Through those parts we shall be extending an acquaintance with the British name, the British character, and British influence, and in those parts it is our especial interest to do so. And in conclusion, it has an obvious tendency, which, if I do not now dwell on, I cannot too strongly express my sense of the importance of, in respect to the pecuniary interests and the political objects of the Company in Persia and Central Asia, it has an obvious tendency to attract commercial men, in this country and India, to the commercial capabilities in Persia, and offers an invitation and facility for their cultivation, by enabling them to form establishments and trials in so intermediate a situation between India and England, that with each their distance of intercourse could be little more than a month.

If you look at the length of the voyage from Suez, and its sterility of interest, political or commercial, and contrast it with the course through Syria and Bussora, taking up the whole line of our important political interests with Persia, and opening new commercial interests in the route, I believe that in respect to time, and other important objects, you will deem the latter preferable; and if so, will give it, I trust, your encouragement.

Believe me, &c.

(signed) *J. W. Farren.*

His Majesty's ship Alligator left Bombay on the 27th instant, and reached Muscat the 4th February, passed Cape Jask the 8th, having sailed from Muscat on the 7th, where they remained three days; off the Quoins the 9th, Cape Nabon the 10th, Cape Verdistan the 11th, and passing close to Bushire, reached Karrack on the 13th, making the passage, under some delays, in 15 days. After taking a pilot at Karrack they lost the wind, sprained a mast, and were considerably impeded by the current of the Euphrates, which made them five days from Karrack to Bussora, a distance not further than from Verdistan to Karrack, which was performed in two. The voyage altogether was 19 days, and might be done by a steamer in a fortnight; from Bussora to Damascus 12, making 26 days; from Damascus, by steam, to Leghorn, Trieste, Malta, or Marseilles, from 6 to 15 days, and to London in 7 or 14 days or a month, allowing ample time in two months. If from Damascus to Constantinople by land, 12 to 14 days, making 34; and from Constantinople the ordinary post is 28, though couriers arrive in 19, 21, and 23 days. If from Damascus to Malta, by steam, six days; and from Malta to England, by the regular Government steam packets, 23 days, making 29 days from England to Damascus.

(39.) Letter from Court of Directors to Bombay Government; 14 March 1832.

(39.)—LETTER from the Court of Directors to the Governor in Council at *Bombay*, (Public Department), dated 14th March 1832.

Para. 1. WE shall now reply to the letters noted below * which relate to the maintenance and employment of the steam vessels attached to your Presidency, and to the proposed increase of their number, for the purpose of more expeditious communications between India and Europe by means of the Red Sea.

ANSWER

---

* Marine Letter, 18 April 1830. Ditto, 12 November, No. 15. Ditto, 25 July 1831, No. 10.

Appendix, No. 25.

(39.) Letter from Court of Directors to Bombay Government; 14 March 1832.

ANSWER to Letter dated 18 April 1830.

2. Your letter of the 18th April 1830, communicates some information respecting the probable expense of steam vessels for the Red Sea. You consider the expense over-estimated in the statement from the Marine Department, dated 17 April 1830. We, on the contrary, consider it under-estimated, because that statement omits many items which ought to be taken into account. The statement, corrected accordingly, would stand as follows:

	Rs.	£.
Teak-built Bombay vessel with engines and stores complete, 160-horse power: the hull and engines last 15 years; the boilers last four years, and after repairs three years longer	3,52,071	33,800
One additional boiler (in England) - - - - -	£. 1,200	
Repairs twice, at 300 *l.* - ditto - - - - - -	600	
		1,800
	£.	35,600

Annual Expense.

		£.
Capital sunk annually for 15 years in vessel *Rs.* 23,471 or - -	£. 2,249	
Ditto - - ditto - - in boilers - - - - -	120	
		2,369
Interest on capital at 6 per cent., *Rs.* 21,000 - - - - - - - -		2,012
Insurance at 7 *l.* 10 *s.* per cent. on the half of 35,600 *l.* or 17,800 *l.* - -		1,335
Establishment, *Rs.* 37,600 - - - - - - - - - - -		3,603
Stores and repairs, *Rs.* 8,000 - - - - - - - - - - -		766
Provisions, *Rs.* 7,500 - - - - - - - - - - - -		719
Coals, half a year's or 182 ½ days' consumption, at 24 hours to the day, supposing the vessel unemployed or under sail the other half year. One bushel per hour for every 10-horse power: 84 lbs. are equal to one bushel: number of tons 2,628. (This is the rate of consumption of the very best coals, that of inferior coals is greater.) 2,628 tons, or 1,941 chaldrons in London, at 30 *s.* - - - - - - - - - - - - - - -		2,911
Freight from London to Bombay, at 40 *s.* per ton - - - - - -		5,256
Insurance from London to Bombay, at 3 per cent. - - - - - -		245
About one quarter being put on board the steamers at Bombay, the remaining three quarters, or 1,971 tons, at Mocha, Cosseir, or Suez; freight to those stations, assumed on the average at 50 *s.* per ton, to Mocha being probably less, and to Cosseir and Suez more - - - - - - - - -		4,927
Insurance on ditto, from Bombay to Suez, assumed at 3 per cent. on 11,500 *l.*		345
Add expense of landing, warehousing, and re-shipping coals at Red-Sea stations, 1,927 dollars, (*see* Captain Pepper's letter, dated Aden, November 1829) for six times only, the smallest supposable number, would be dollars 11,562, at 4 *s.* - - - - - - - - - - - - - -		2,312
	£.	26,800

This computation gives 6 *l.* 1 *s.* 6 *d.* per ton in the whole quantity, or 7 *l.* 1 *s.* on the three-fourths for the Red-Sea stations.

Coals purchased at Alexandria and sent over the Isthmus of Suez would be 6 *l.* 10 *s.* per ton, (*see* Mr. Barker's letter, dated 23d January 1829,) and the expense of putting them on board the steamers would have to be added.

The annual expense of the Hugh Lindsay's coals is computed in the Bombay statement of 17th April 1830, at rupees 71,400; but the actual expense of coals appears by a subsequent statement to have been in 1830, 49,501 rupees for three months, and in 1831, rupees 33,361 for three months, with the following note: "The amount of coals is less this year on account of their being partly freighted in Government vessels; but as all the bills for the conveyance of coals to and from different places in the Red Sea have not come to hand, it is probable the amount will be fully equal to that of the former year." It must not however be supposed that employing Government vessels to carry coals costs the Government nothing, and for the most part the coals must be sent by private sailing vessels, which must go for that express purpose, and can bring nothing back. The statement besides includes no allowance for risk, and it does not appear what allowance is made for freight.

First outlay of steam vessels, at 35,600 *l.* per vessel - - - - - £.	142,400

Expense of one steam vessel for 15 years, including the original outlay £.	402,000
Expense of four steam vessels for 15 years, including the first outlay after this period, the original outlay of 142,400 *l.* would recur - - - £.	1,608,000

Steam Communication with India, and on the Rivers of India.

3. We give this statement as an approximation only. We desire that you will return us a statement on the same principle, taking care to bring into view any item here set down, and any others that we may have omitted.

4. The annual expense of two Red-Sea steam vessels would, according to this statement, be 53,600 *l.*, supposing that the vessels and engines turned out well. But there is little ground for this supposition.

5. We transmit a number in the packet, a letter to the Supreme Government, on the subject of the Telica steam vessel, in which we have shown how very far from encouraging are the experiments hitherto made in India in the building or purchasing of steam vessels.

6. The loss from defective vessels or engines is still as likely as ever to occur, and every loss of this description must be added to the annual charge. The expenses of the surveying vessels must also be brought into the calculation.

7. Steam vessels on the Mediterranean side of the Isthmus of Suez would cost less than on that of the Red Sea in fuel, and in some other particulars. Still, taking all circumstances into consideration, we are satisfied that one hundred thousand pounds (100,000 *l.*) would be a very low estimate of the annual charge of four steam vessels, two for each side of the Isthmus, even if all circumstances of the original outfit of the vessels should turn out much better in future than in the great majority of past instances; supposing all future experiments should turn out as ill as the past, it is impossible to compute the magnitude which the expense might attain.

8. We are not insensible to the advantages of a rapid communication with India, and of the importance of encouraging the application of steam to that purpose.

9. We are also disposed to believe that a steam communication by the Red Sea, and still more, if it should be found practicable, by the Persian Gulf and the River Euphrates, would open the way to other improvements, and would ultimately redound to the benefit of this country as well as of India; and if our finances were in a flourishing state we might possibly feel it a duty to incur even the enormous outlay which we have specified. But in the present condition of our resources we cannot think the probable difference of time in the mere transmission of letters a sufficient justification of such an expense. We cannot anticipate that the return in postage and passengers would pay more than a very small portion of the charge.

10. These considerations induce us to pause before we determine the great question of engaging in any project of this character at present; not seeing our way clear to such a result as would justify the expense, we shall not authorize any further steps in the matter.

11. At the same time we deem the subject too important to be lost sight of or hastily dismissed. We shall, therefore, not fail to carry on inquiries into the practicability of effecting the end in view at a reasonable expense. We desire that you also will prosecute similar inquiries, and communicate to us the result, but that you will not adopt any measure involving expense without our previous sanction.

ANSWER to Letters dated 12th November 1830 and 25th July 1831.

12. The preceding paragraphs were prepared some time since, but we have deferred their transmission in the expectation that more recent experiments might throw some additional light on the subject. But the only communication in the above letters which it seems necessary to advert to is the letter from the Superintendent of the Indian Navy, dated 23 August 1830, in which he states that to keep up the communication from Bombay to Suez by steam four steamers will be required, three of them only manned, as "one is supposed to be constantly under repair." Our calculations above were made for two steamers only on the Bombay side of the Isthmus. The Superintendent furnishes a statement, making the expense of one of these vessels rupees 23,125. 2. per quarter. This would make the expense of the three working steam vessels for that side of the Isthmus nearly three lacs of rupees per annum, leaving the charges for the fourth, or the one continually under repair, to be added, which it may be presumed would make the charges for the four, according to the Superintendent's view, about four lacs of rupees per annum. But this statement, like that of 17th April 1830, omits many essential particulars, and requires to be reconstructed on the principles of our preceding calculation, which a diligent and careful inquiry has satisfied us is rather below than above the probability of the natural charge: and indeed, without going again over our former ground, it will be sufficient to observe that the actual expense of the Hugh Lindsay's coals for three months was on both her late voyages more than double the amount allotted in the Superintendent's estimate for the entire cost of the voyage, including establishment and wear and tear of the vessel. With respect to the Superintendent's plan for supplying the Red-Sea stations with coal, as in the passage cited below*, the best insight we can obtain into the subject has given us every reason to think that it would be neither so easy of accomplishment nor so economical as the Superintendent believes.

13. You will receive this despatch as including in it the reasons of our having complied only in part with your indent for coals and tallow, dated 15 March 1830, and for our not complying with your more recent indent, dated 7 June 1831.

We are, &c.

---

* 10. " I would also beg leave to suggest that the supply of coals should be the Llongennach coal, and that it should be annually deposited at Mocha or Perim, whichever may be the head station, direct from Europe. The vessels leaving Europe from February to May, would enable ships coming to this Presidency to take the coals at a very reasonable freight, as in being able to leave the Red Sea from June to September they would have a quick passage to this port, and the coals might be conveyed by country craft from either of these ports to Suez or Cosseir."

(40.) Extract Letter from Bombay Government; 18 May 1832.

(40.)—EXTRACT LETTER from the *Bombay* Government to the Court of Directors (Marine Department), dated May 18, 1832.

Para. 1. WITH reference to the letter from your Honourable Court's Secret Committee, dated the 18th of June 1831, we have the honour of transmitting to your Honourable Court the accompanying copy of a Minute by our Right honourable President, submitting the result of his inquiries on the subject of an overland communication between England and India, either by the Red Sea or through Turkish Arabia, together with copies of two papers received by his Lordship from Commander Wilson, of the Honourable Company's steamer, Hugh Lindsay.

2. We heartily concur in his Lordship's views as to the great public good that must result from the establishment of a regular and speedy communication with England *viâ* the Red Sea, which is attainable by steam navigation alone; and in the event of your Honourable Court's seconding our exertions, and causing steam vessels to be constructed for the navigation to the Red Sea, we conceive Commander Wilson's proceeding to England, to enable the engineers to profit by his personal knowledge and experience as to the descriptions of vessels best suited for the purpose, to be highly expedient.

3. We have consulted his Majesty's Consul-general in Egypt as to the facility of landing coal at Damietta, and of transporting it across Lake Menzaleh and the Desert to Suez, and the probable cost by the ton, specifying each and every head of expense, and we have also requested his opinion on the practicability of the plans suggested by Captain Chesney, for facilitating the undertaking, and on the effect which he thinks the proposal to adopt them would have on the Pacha of Egypt. We have also requested Mr. Barker to transmit to your Honourable Court, with as little delay as possible, a duplicate of the report which he may make to us, in answer to this reference.

(41.) Minute of Governor of Bombay; 4 May 1832.

(41.) —EXTRACT MINUTE of Earl *Clare*, Governor of *Bombay*, dated Parell, May 4, 1832.

I PROCEED to make some observations to the Board, on the only part of the subject treated of in these papers with which I can pretend to have any acquaintance, and that is the facility of communicating with Europe by the Red Sea, and I beg to say that my knowledge is very confined, being the result of what I learned in the course of my tedious journey overland last year.

The Court desire us to make minute inquiries on the subject of an overland communication, either by the Red Sea or through Turkish Arabia, and to transmit with the least practicable delay the result to the Court, and to the Governor-general.

I believe as much information as could be obtained on the subject of the passage by the Red Sea, in the absence of almost any practical experience, has been already sent home, and the great importance of establishing a quick and certain intercourse between England and India, by the means of steam vessels from Bombay to Suez, and *vice versâ*, has been over and over again urged on the immediate attention of the Court. I will not, therefore, take up any portion of the time of the Board by enlarging on these topics, but will content myself by stating that I presume the importance of this object is now admitted on all sides, both here and at home, and by expressing my hope that the Court will be induced shortly to direct the measures which should be taken to bring, I may almost say, Europe and India together.

I think the three voyages which the Hugh Lindsay has made to Suez and back (the two latter at the most unfavourable season of the year for a voyage down the Red Sea to Bombay), have proved to demonstration that the experiment has succeeded beyond the most sanguine expectations of those who were well aware of the difficulties attending its navigation, for it must always be remembered that though the Hugh Lindsay is an admirable steamer, perhaps the best I ever saw, she was not constructed for so long a voyage, and that when laden with coal for a voyage of eleven or twelve days, (as she was only constructed for a voyage of five or six days), she is so deep in the water, her course is very much impeded, and instead of going eight or nine knots an hour, (the natural speed of the vessel when at her proper height above the water), she does not go more than five or six knots in the hour, and notwithstanding this impediment to her steaming, I can safely say from my own experience that she made her way well and bravely against the most tremendous sea I ever encountered in a steam vessel, and I have been in the habit of making voyages in steam vessels between England and France, and still oftener between England and Ireland and back, ever since their establishment in our parts. If, therefore, the Hugh Lindsay, with this disadvantage, has done so well, what may we not expect from steam vessels built expressly for the voyage, with the knowledge we now have of the sort of steam vessel which we require?

The great mistake which all persons who write on the subject seem to me to make is, that they attempt to make out too good a case, and Captain Chesney stands in this predicament. I doubt exceedingly whether any, even a powerful steam vessel could ascend the Red Sea at the rate of six or seven knots an hour, during the prevalence of the strong northerly winds from May to October, and from what I have heard, I believe those winds are anything but moderate, and that though a violent gale of wind may be of rare occurrence, the swell is so great in that narrow sea, the course of a steamer is much more impeded than if she were beating againt a more violent wind in the open ocean; and it is quite idle to talk of "unshipping the paddles and sailing the whole length of the Red Sea during the prevalence of what Captain Chesney calls the trade winds up and down the sea,

going

going at the rate of eight or ten knots an hour without steam, in a nice breeze and smooth water." The truth is, this easy navigation exists only in Captain Chesney's imagination, and I believe I am quite correct in saying that no vessel properly constructed as a steamer could be so constructed as also to sail well in the Red Sea.

In a former Minute I have stated fully the difficulties attending the navigation down the Red Sea in the winter months, from what I know, therefore, on this part of the subject, and from what I have heard from others, I incline to think that Captain Chesney makes it to be a much easier matter than it is in reality.

In calculating the time required for the transmission of letters to Alexandria, I think it better rather to talk of days than hours, for I consider it to be next to impossible to say in how many hours the despatches can be sent there, whether landed at Cosseir or at Suez. It does very well to calculate by hours in sending a letter from London to Edinburgh, but it is very different when the question of sending one from Bombay to Alexandria, upwards of 3,500 miles, is soberly and seriously under the consideration of Government.

I believe the route by Suez will prove the easiest, the quickest and the cheapest for sending despatches. Captain Chesney says 4½ dollars only were asked for 11 camels, to take him from Cosseir to Kenné, and it might therefore be supposed that the sum he gave is the average price paid for camels crossing the desert of the Thebaid. I am of opinion that Captain Chesney is mistaken, and that the price is much higher. I paid from Gheneh to Cosseir, 25 piastres; one dollar and three quarters for every camel I hired: possibly I paid too much, but from the great traffic across the Desert, and from the numbers of camels which I saw laden with grain from the banks of the Nile, and destined for Cosseir, whence it is shipped for Arabia, I do not think camels can be had generally at a less price; but as the camels on their return from Cosseir almost always come back without any load, (there being little foreign commerce to Cosseir, and the barren shores of the Red Sea not producing any thing), a person like Captain Chesney, who desires to cross the Desert to the Nile can, I dare say, generally get camels at the price he mentions, (I met hundreds returning to Gheneh without any load), but it is a mistake, I think, and calculated to mislead the authorities at home if it is taken as the price of hired camels in Egypt.

I doubt whether a river-going steamer could, as Captain Chesney says, ascend and descend the Nile at all times to Rosetta; in the early part of the month of November 1830, when the river is by no means as low as it is later in the year, the boats in which we sailed were frequently aground, and from the number of sand-banks in the river, which, particularly at night, it is very difficult to avoid, I hardly think, except during the time of the inundation, a steamer would be of any use. I should also say that the time allowed by Captain Chesney for descending the Nile from Gheneh to Cairo is too short, but I believe he is pretty correct in stating that a Tartar on a dromedary can reach Alexandria from Cosseir in ten days, going through the Desert, though it would not be safe to take so short a time as the average for sending despatches by that route.

For these reasons, therefore, I am of opinion that it will be better at all times for the steam vessel to go up the Red Sea to Suez, and there to land her despatches. She will reach Suez from Bombay with tolerable certainty in 26 days, (allowing ample time for taking in coal at Maculla and Juddah, in which work six days are now consumed at those two ports; but by sending proper boats and baskets I should say full one-third of the time might be saved;) and the despatches would be carried by an Arab messenger with the greatest ease in less than two days to Cairo, from which city there is a daily post to Alexandria; and if two days more are allowed, the packet would be received there in 30 days from Bombay.

Captain Chesney suggests that coals might be landed at Damietta, and transported thence as he describes to Suez, and he states the possibility of the undertaking by the means of sundry works which he enumerates, and which I have little doubt, if Egypt were a province dependent on Great Britain, might be accomplished, and he ends by the magnificent project of connecting the Mediterranean and the Red Sea.

In my opinion it will be prudent to confine ourselves to the real facilities which with little trouble or expense Egypt now offers under the enlightened rule of that wonderful man Mahomet Ali Pacha for an overland communication with Europe, by sending our despatches *viâ* Suez and Cairo. He governs the country with so firm a hand as to leave nothing to be desired by any stranger passing through it, with respect to the security of his person and property.

I believe the Pacha wishes to encourage the intercourse of Europeans with Egypt, and that he has no sort of objection to the influx of any number of travellers through it on their way to India. He has made the passage of the Desert, by the strong measures he has taken with the Arab tribes, perfectly secure, and he has done so because he receives a considerable revenue from the corn and merchandize which is transported across it, and he knows very well that unless the route is safe from plunder, he will suffer more than any one else.

When I saw last year that Mahomet Ali Pacha, enlightened and wise as he undoubtedly is beyond almost all other Eastern rulers, would not allow even a buoy to be fixed or a lighthouse erected to assist mariners in steering their vessels into the difficult and at present somewhat dangerous port of Alexandria, I cannot suppose the same person will ever consent to the removal of the obstruction at Damietta Bar by means of machinery, or the improvement of the passages from the lake Menzaleh to the sea, with the view of enabling us to send our coal through his country to Suez at a cheaper rate than we can now send it by the circuitous voyage round the Cape. As however the supply of fuel for the steam vessels is a most important consideration, a letter may be written to His Majesty's Consul-general at Alexandria, and he may be asked the question as to the facility of landing coal at Damietta and of transporting it across Lake Menzaleh and the Desert to Suez, and the probable cost by

Appendix, No. 25.

(41.) Minute of Governor of Bombay; 4 May 1832.

by the ton, specifying each and every head of expense; and he may be requested to send a duplicate of his report to the Court for their information. As Mr. Barker, the Consul-general in Egypt is intimately acquainted with the country, it will be well to send to him a copy of Captain Chesney's letter, and his opinion may be asked on the practicability of the plans suggested.

I have already stated that despatches may be received from Bombay in 30 days at Alexandria, and supposing a communication by steam established between that port and Malta, as the distance is full 800 miles, seven more days must be allowed; and if three weeks are taken as the average time for the passage from Malta to London, I have little doubt that in eight weeks, almost during the greater part of the year, our despatches may be conveyed, I may almost say with certainty as long as Mahomet Ali Pacha shall govern Egypt, from Bombay to London; but unless the Court shall, in conjunction with His Majesty's Ministers, establish a steam communication between Malta and Alexandria, great and unavoidable delays will be experienced in forwarding them. I should think that by extending the voyage of the Malta steamer, and adding to the number of steam vessels on that station, the object might be accomplished without much difficulty or any great additional expense; and considering the importance of a quick and certain communication with India, it is one which deserves the serious and immediate attention of the Court and Board.

During the south-west monsoon I do not think it possible, from all I have heard, for a steam vessel to navigate the Indian Ocean. The port of Maculla in Arabia, which must be the depot for coals, is then, I understand, inaccessible; but even if it could be approached, I believe the violence of the wind is too great to enable the steamer to cross the ocean to Bombay.

In order to reach Malta before the return of the steam packet to London the first week in every month, the Bombay steamer should start about the 20th of the month, and I should say that from the 20th of May to the 20th of September, at soonest, the communication from Bombay must be interrupted, and the steamer which leaves Bombay on the 20th of May must remain at Suez during the monsoon.

The Malta steam packet, which leaves Falmouth about the first Tuesday in every month, may be calculated to reach Malta in three weeks; and allowing two more weeks for the India despatches to reach Suez, I do not think the Bombay steamer could start from that port before the middle of the following month; but during the greater part of the year her passage back may, I think, generally be made in 24 days, except perhaps during the months of December and January, when a little longer time must be allowed; but it is not too much to say that in all human probability we may also receive despatches from England in eight weeks. The Bombay steamer should leave Suez at latest on the 10th of May, to insure her arrival before the commencement of the monsoon: during eight months, therefore, of the year there may be a regular and steady communication to and from England every month, and answers may be received to despatches in four months, being less than the ordinary duration of one voyage home round the Cape.

To ensure this most desirable object, we should, I think, have at least four steam vessels, constructed on the newest and most approved principle, each calculated to carry 14 days' consumption of fuel without being deep in the water when so laden and fitted-up for the accommodation of passengers, great numbers of whom would, I feel convinced, if the communication was regularly established, prefer this route to the long voyage round the Cape. I have stated in a former Minute that Maculla should be the depôt for coal, and a supply must be always laid in there before the monsoon; the quantity required may be calculated without difficulty, according to the probable consumption of the engines for 10 voyages to the Red Sea and back in each year. We shall require four steamers at least in the event of any accident occurring to the machinery of the vessels steaming, as it would not be safe to calculate on a steamer being able immediately to return after having made her passage, nor could the officers and men, particularly the engineers, stand the fatigue of being constantly afloat. The vessels may be sent out from England, or, which probably would be the preferable course, the engines should be sent to Bombay, and vessels there built to receive them.

With respect to the communication through Turkish Arabia, I believe little is practically known in Bombay; whatever our records furnish should be extracted from them and sent home, and to the Governor-general. By detaching two sailing vessels to the Gulf before and during the monsoon, despatches forwarded *viâ* Vienna, Constantinople and Bagdad, or by Petersburgh and Tabreez and Bushire, might be twice received at Bombay, I should think, in less than four months from England, at a time when the steam navigation by the Red Sea will be necessarily closed. With this view I have in a former Minute proposed to try the experiment by directing a Paris newspaper to be sent by the route of Turkish Arabia, for I feel sure, until the trial shall be made, all our inquiries will lead to no practical result. There is, I understand, a route along the coast from Mandavie in Cutch, and through the Scind territory, to a port nearly opposite Muscat, which is used by the Bombay merchants in sending their letters during the monsoon, and advantage may at any time be taken of it when it is required to forward an important despatch, and from Muscat to Bushire and Bussorah, the communication is at all times quick and easy. The Court I conceive, from what Mr. Farren says, whenever it is desirable to send a despatch with expedition to India, may safely send it by Paris, Vienna and Constantinople, either to him at Damascus, or to Major Taylor at Bagdad, and the perusal of these papers confirms me in the opinion I have already recorded, how desirable it is to remove the head quarters of our Resident permanently from Bussorah to Bagdad, where he will have certainly more opportunities of facilitating the intercourse with England by this route than he can have at Bussorah.

It

Appendix, No. 25.

Steam Communication with India, and on the Rivers of India.

It would be difficult, in the absence of any certain knowledge on the subject, to give an opinion which is the preferable route for an overland communication, whether by Syria or Turkish Arabia, or by the Red Sea. We have some experience of the facilities afforded by the latter route, and we know that it may be considered at present safe; and until we know something more of the other route, I am inclined to prefer it. Undoubtedly, if letters were sent from Malta direct by a steamer and landed in Syria, and that they could be safely forwarded by Tartar messengers from Damascus to Bagdad and Bussorah, as stated by Mr. Farren, we should receive them sooner than by the Red Sea; and if hereafter this shall be determined on, the same steam vessels which may be sent out for the navigation of the Red Sea will be equally adapted for the navigation of the Persian Gulf.

I have delayed circulating these papers until my return to the Presidency, in order that I might put some questions to Captain Wilson, on whose practical knowledge of the subject of steam navigation between India and the Red Sea the greatest reliance may be placed. Captain Wilson's Answers to my Queries, extracted from Captain Chesney's Report, fully bear me out in the opinions I have in this Minute given of several of his statements, and I beg to call the particular attention of the Board to an able paper on the steam navigation in the Red Sea, drawn out by my desire by Captain Wilson. If the Court shall decide to build four steamers with engines on the newest and most approved principle, (I understand Braithwaite's steam engines are best adapted for the purpose), I would respectfully beg to suggest to the Court the expediency of sending Captain Wilson to London, in order that full advantage may be derived from his practical knowledge and experience. Much of the success which I anticipate will depend on the construction of the vessels and the machinery supplied for propelling them, and I feel quite convinced that Captain Wilson's presence in London, giving the sort of information required, which no other person can give, will hereafter save the Honourable Company lacs of rupees, in the event of their deciding on an establishment of steam vessels on an extended scale in this country.

I beg that copies of this Minute, and of a Minute which I recorded last July on the same subject, may be sent with as little delay as possible to the Honourable Court, and to the Governor-general.

(42.) Capt. Wilson's Answers to Earl Clare's Queries.

(42.)—Captain *Wilson*'s Answers to Earl *Clare*'s Queries.

Extract from Captain Chesney's Letters	QUERIES.	ANSWERS
During five months, beginning from the middle of May, the wind blows steadily and moderately down the Red Sea.	- - Does not the north wind blow strong down the Red Sea during those months?	- - From May till August frequent strong north-westers blow down the Red Sea; in the intervals between them a moderate northerly wind is generally experienced: from the end of August the winds are more variable.
It is evident that the foregoing difficulties do not apply to steamers, which can make a straight course at all times, and which could ascend the Red Sea against the moderate winds prevailing there at the rate of six or seven knots per hour.	- - Can a steam vessel go at this rate up the Red Sea against the north wind?	- - I have stated above that the most prevalent winds are by no means moderate, and northerly winds would frequently be experienced even in the months between October and May, in which a fast steamer would not make good more than 2 ½ knots; between May and September the northerly winds at times blow so hard that little better than 1 ½ knots would be made against them.
For I apprehend that a violent gale of wind is a rare occurrence in that sea.	Is this the case?	- - Although it is true that what seamen call a violent gale is not often experienced in the Red Sea unless in a squall, still a gale is by no means a rare occurrence.
And the sequel would prove that a steam vessel (of moderate power) can ascend with much rapidity even at the most unfavourable moments.	Can she? - -	*See answer above.*
Cosseir offers one route, its port is an open one, but perfectly safe.	- - Is the port safe at all times, and could a steamer remain at anchor in it if necessary during the prevalence of the south-west monsoon, when she could not return to Bombay?	- - The port of Cosseir cannot be considered a safe one; there is almost always a swell setting into it, from its being perfectly open to the sea, and during easterly, north-east or south-east winds there would be much danger in remaining there; the fact is, the whole of that part of the coast of Egypt possesses no tolerable harbour, at once sheltered and easy of access, or Cosseir would never have become a sea-port.

(*continued*)

Appendix, No. 25.

(42.) Captain Wilson's Answers to Earl Clare's Queries.

Extracts from Captain Chesney's Letter.	QUERIES	ANSWERS.
The next route that presents itself is that by Suez.	- - Which is the best anchorage, with reference to the foregoing question?	- - The port of Suez is unquestionably the best, as it is safe at all seasons of the year.
Simply because there is what may be called a trade wind during a considerable portion of the year, down at one period and up at another, making it well worth while to unship the paddles to sail the whole length of the Red Sea, going at the rate of eight or ten knots without steam.	- - Is a steamer with paddles unshipped capable of navigating the Red Sea with the south wind up and the north wind down the sea, and at what rate?	- - A steamer with her paddles unshipped might make seven or eight knots an hour if rigged with square sails while in the southerly wind; but the southerly wind alluded to, which prevails in the lower part of the Red Sea, (during the north-east monsoon in the Indian Sea) blows only about one-fourth of the way up, after which variable winds, or north-westers, would be experienced; of course the northerly winds would propel the vessel down the sea in the same way, but its extent of continuance is variable, nor does it ever blow like a trade wind, but in strong occasional bursts, with light or variable winds between.
Going at the rate of eight or ten knots without steam in a nice breeze and smooth water, not offering any serious impediment or delay when contrary.	- - Is there often smooth water in the Red Sea?	- - The swell rises and falls very quickly in the Red Sea, and smooth water is seldom experienced for many successive days, but I never saw a nice breeze in any sea sufficient to carry even a fast sailing ship 10 knots, which did not bring with it considerable swell, still less so in the Red Sea, where every increase of wind speedily raises a chopping sea, (often increased by varying currents) which very much impedes a steamer.
	What is your opinion on the possibility of constructing a steamer which shall be also adapted for a sailing vessel in the Red Sea?	- - From the distance a vessel has to go to reach the Red Sea, however the coal depôts may be arranged, all her stowage would be required for the coal and other things which are indispensable; and there would be no room to stow away all the masts, yards, sails, standing and running rigging which she must have to sail with any advantage, (not to mention the variety of spare stores thus rendered necessary) and which must all be down and stowed away when going against the wind; the lower masts, too, if sufficiently large to bear all the sail that would be requisite, would, by their weight and size, materially impede the vessel's progress in going against the heavy winds which would be so frequently encountered in the Red Sea; it frequently happens there that vessels are taken aback when running with a fair wind; a steamer so situated would be placed in rather an awkward predicament if near any of the numerous shoals where there is no anchorage with her paddles unshipped; some hours would elapse before they could be reshipped, and the vessel got under steam, as well as all the sails and masts and yards got down with which she was encumbered; and if she did not drift on the nearest shoal, she certainly would loose much that had been gained by sailing, besides the risk incurred. I am therefore of opinion that a vessel for the Red Sea should depend on steam, and be only furnished with sail sufficient to lay to in heavy weather in the event of accident to the machinery, or to act as an auxiliary to the engines in a fair wind.

(43.) Report by Captain Wilson: 4 May 1832.

(43.)—REPORT by Captain *Wilson*, dated 4 May 1832.

THE practicability of steam navigation by way of the Red Sea having been proved by the performance of the voyage thrice by the Hugh Lindsay, under peculiar disadvantages, the following opinions on the plan and class of vessels best calculated for the purpose are offered as the result of experience in the trips made by that vessel.

It has been found that the greatest impediment to the speedy performance of the voyage is the delay occasioned by taking in coal at the several depôts in the Red Sea; it follows therefore that the plan which can be carried into effect with the least delay of that description must be most eligible. If then the voyage from Bombay to Cosseir or Suez could be performed in two stages, our object would be obtained. The distance from Bombay to Mocha is 1,780 miles, which, during the north-east monsoon, might always be accomplished in in 11 days; the Hugh Lindsay made the passage from Bombay to Aden, 1,640 miles, in 10 days and 19 hours, without the assistance of the north-east monsoon, as she started on her first trip late in March, and the north-east winds failing sooner than usual, she had light westerly breezes against her the whole way, besides the disadvantage of starting with 11 days' coal on board, when built to carry 5 ½ only, which so affected her speed that at starting she went but 5 ½ knots, and for the first four days did not exceed 6 ½: if then she, under such circumstances, could perform a distance of 1,640 miles in 10 days and 19 hours, there can be little doubt that a vessel built to carry 14 days' coal would perform 1,780 miles (the distance from Bombay to Mocha) in 11 days, if she went at the rate of 6 knots the first three days, 6 ½ the next two, 7 the next two, 7 ½ the next two, and 8 the last two days, (in all 11), she would complete a distance of 1,824 miles, which exceeds that she would have to go; and this progressive increase of speed would, I doubt not, be experienced. Should objections be raised by engineers to a vessel steaming 11 successive days, I can only state the fact that the Hugh Lindsay, deeply laden as she was always when starting for the Red Sea, and when consequently her engines must have borne an unusual strain, did steam, 10 days and upwards, under full pressure, on her first trip, and on the two last nearly nine; and at the end of each the boilers were so clean and the flues in that state, if requisite, she could have steamed two or three days longer without the least detriment. I conclude then, that the passage from Bombay to Mocha might be made in one stage of 11 days; and if so, that from Mocha to Cosseir or Suez could be made in the same period at any time during the north-east monsoon, and frequently in less, as the distance from Mocha to Suez is only 1,200 miles: thus the voyage from Bombay to Suez might certainly be made in 25 days, including three days stay at Mocha to take in coal, slight repairs, &c., though less time would usually suffice.

The class of vessels I should consider fittest for the purpose would be those of about 260 or 270 tons, with engines that would not consume more than nine tons of coal in the 24 hours, their draught not to exceed 10 feet 6 inches when laden. They would require to be built fuller than such vessels usually are, to give them the necessary capacity; but that they would possess sufficient speed to perform the passage as above stated I have not a doubt; and four such vessels would be sufficient to keep up a monthly communication from Bombay to Suez during the north-east monsoon. I must here observe that too much is expected of steamers which are required to make long sea voyages: such vessels cannot be constructed on the fine models which coasting steamers have, whose longest trips are from three to four days, and consequently have less speed; but if vessels can be constructed as proposed, possessing the speed above stated, and by means of which a communication with Europe in eight weeks, kept up during nine months in the year, it is surely an object worth attaining. I have been led to fix on this class from the following considerations: the conveyance of despatches and letters must be the primary object; that of passengers a secondary one, because, to carry any number of passengers that would make a return worthy of consideration, the accommodation indispensable in a warm climate could only be afforded by vessels of a very large class; such, besides the great outlay in building and equipment, would consume an enormous quantity of coal, the furnishing which for use in the Red Sea will form one of the heaviest items of expense attending steam navigation in that part of the world, whichever way it may be done; again, the great expense and difficulty of maintaining the requisite establishment of engineers to keep vessels of a large class efficient, from the proneness of those people to inebriation, and the consequent loss of their services by frequent sickness or death; this has been felt with the Hugh Lindsay: lastly, large steamers could not go into the sheltered anchorage at Mocha.

The return passage from Suez to Bombay would require a different arrangement, as when the north-east monsoon blows strong, the distance from Mocha to Bombay would be too great to be accomplished by a vessel carrying even 14 days' coal; from Suez to Mocha would always be effected by a vessel of the proposed description, in all the varieties of weather she might encounter, allowing a variation of two to four days in the passage, when she might be obliged to take shelter from the southerly winds blowing unusually strong; but it would be necessary to break the distance between Bombay and Mocha, and I know no place better suited to the purpose than Maculla; as the north-east monsoon blows strong between Mocha and Maculla, the vessel might leave the former with five or six days' coal on board, in good steaming time; on arriving at Maculla she would take in her full quantity, and make the passage to Bombay with certainty.

I should think the most economical way of sending the necessary supply of coal to the Red Sea would be for Government to purchase it at the mines, and send it out direct to Mocha by private ships, so regulating their departure from Europe, that they should arrive at Mocha at the commencement of the south-west monsoon, when having discharged their cargo, they might in 12 or 14 days cross over to Bombay, where they would get a return freight to Europe, and thus not going home empty, would be enabled to bring the coal out at a moderate freight; there is now a respectable agent at Mocha, who would be perfectly competent to make any arrangements, and the proportion necessary to be sent to Cosseir or Suez he could transport to those places at the most favourable seasons of the year in Arab boats.

It may be thought that the constant strong winds which blow from the southward during the north-east monsoon, and which sometimes render communication difficult with vessels in the roads, would make it an unfit place for a coal depôt during that season; this would no doubt be the case with steamers whose draught obliged them to anchor in the outer anchorage where ships usually do, but a vessel drawing ten feet six inches may anchor within the line of the north and south forts perfectly sheltered and in smooth water, and not more than 400 yards from the shore, so that boats might be hauled off and on with the coal, and a large coal shed about 100 yards inshore of the south fort would be all that is required.

Appendix, No. 25.

(43.) Report by Captain Wilson, 4 May 1832.

Should however, (which I do not anticipate), unforeseen difficulties occur in carrying the above plan into execution, there would be no loss of outlay in the vessels, as they would still be the fittest for the purpose; were it determined to continue several depôts as at present, having shorter stages to run, the room no longer required for coal would admit of more passengers being accommodated. In the selection of ports for depôts, it is not merely requisite that they should have a safe anchorage, and by situation a nearly equal division of distance, but they should afford the means of speedily shipping the coal by men and boats, water and other supplies should be readily procurable, and they should be the places in which, having the most commercial intercourse with India, we are well known, and should consequently meet with neither molestation or hindrance of any kind; on all these considerations, the ports I would select for depôts (should it be found impracticable to carry on the communication in two stages) would be Maculla, Judda and Suez, or Cosseir.

In the foregoing I have merely sketched the general plan, the arrangement of details as to what establishment might be requisite at the several depots, and the quantity of coal at each, when the class of vessels were determined on, would be easily effected, and I would only observe that the best plan would perhaps be to have hulks at the several ports, by which the expense and loss of time in landing and re-shipping the coal would be avoided. Maculla is the only place where a hulk could not remain in the south-west monsoon, but there is near it, about 12 miles to the westward, under Cape Broom, a perfectly sheltered anchorage in all seasons, to which the vessel might be removed before the setting-in of the south-west monsoon.

(44.) Letter from G. G. de H. Larpent, Esq. to John Barrow, Esq.; 23 October 1832.

(44.)—LETTER from *G. G. de H. Larpent*, Esq., Chairman of the London East-India Trade Committee, to *John Barrow*, Esq., Secretary to the Admiralty; dated, London, October 23, 1832.

Sir,

AT the request of the merchants of London connected with the East-India trade, and by direction of the Committee of the same, I take the liberty of calling the attention of the Lords Commissioners of the Admiralty to the expediency of directing the Admiral on the Mediterranean station to place the communication between Malta and Alexandria on a permanent footing, by which means the mails from Bombay brought by the steamers from thence may be regularly forwarded to Malta with as little delay as possible.

I am also requested to state, that an official notice has been given by the Government of Bombay, that a steamer will be dispatched on the 1st January 1833, from that Presidency to Cosseir, which place it may be expected to reach early in February next. The merchants of London trust, that their Lordships will be pleased to give some directions for some conveyance to be dispatched from Malta to Alexandria to receive the mails and passengers, about the time they may arrive at the latter place after crossing the Isthmus of Suez, in anticipation of any permanent arrangement, should the details of such a measure, so important to the India trade, require further consideration.

In proof of the necessity of some arrangement of the nature proposed, it may be proper to acquaint their Lordships that the last mails by this route were detained 30 days at Alexandria before an opportunity offered to convey them to Malta.

I have, &c.

(signed) *G. G. de H. Larpent.*

East India Wharf,
10 August 1832.

E. Leslie.

Appendix, No. 30.

Ships and Tonnage Entered Inwards and Cleared Outwards, from and to Countries beyond the Territories of the Three Presidencies; 1793-1831.

Appendix, No. 30.

A RETURN of the Number of SHIPS and the Amount of TONNAGE Entered Inwards and Cleared Outwards, from 1793 to 1831, from and to Countries beyond the Territories of the Three Presidencies; distinguishing the Number of Vessels and Amount of Tonnage at the Ports of each Presidency, the Countries from whence the Vessels came and for which they cleared; and stating the Flag under which they sailed, so far as the same can be complied with; as follows:

—(No. 1.)—

A RETURN of the Number of SHIPS and the Amount of TONNAGE which have Entered Inwards between the Years 1793 and 1831, at the Port of *Calcutta*, from Countries beyond the Territories of the Three Presidencies; distinguishing the Countries from whence the Vessels came, and stating the Flag under which they sailed.

—(No. 2.)—

A RETURN of the Number of SHIPS and the Amount of TONNAGE which have Cleared Outwards between the Years 1793 and 1831, from the Port of *Calcutta* to Countries beyond the Territories of the Three Presidencies; distinguishing the Countries for which the Vessels cleared out, and stating the Flag under which they sailed.

—(No. 3.)—

A RETURN of the Number of SHIPS and the Amount of TONNAGE which have Entered Inwards between the Years 1793 and 1831, at the Port of *Fort St. George* and the Ports subordinate thereto, from Countries beyond the Territories of the Three Presidencies; distinguishing the Countries from whence the Vessels came, and stating the Flag under which they sailed.

—(No. 4.)—

A RETURN of the Number of SHIPS and the Amount of TONNAGE which have Cleared Outwards between the Years 1793 and 1831, from the Port of *Fort St. George* and the Ports subordinate thereto, to Countries beyond the Territories of the Three Presidencies; distinguishing the Countries for which the Vessels cleared out, and stating the Flag under which they sailed.

—(No. 5.)—

A RETURN of the Number of SHIPS and the Amount of TONNAGE which have Entered Inwards between the Years 1793 and 1831, at the Ports of *Bombay* and *Surat*, from Countries beyond the Territories of the Three Presidencies; distinguishing the Countries from whence the Vessels came, and stating the Flag under which they sailed.

—(No. 6.)—

A RETURN of the Number of SHIPS and the Amount of TONNAGE which have Cleared Outwards between the Years 1793 and 1831, from the Ports of *Bombay* and *Surat*, to Countries beyond the Territories of the Three Presidencies; distinguishing the Countries for which the Vessels cleared out, and stating the Flag under which they sailed.

East India House,
15 August 1832.

J. Mill,
Examiner of India Correspondence.

1830-31 -	The Returns of the External Commerce of Bengal for 1830-31 have not yet been received.	

(A.) **1814-15.**

The Reporter of External and Internal Commerce, in his Report of this year, dated 12 September 1815, remarks as follows:—"It may be proper in this place to record the little advantage which the outports of Great Britain have taken of the opening to them of the trade of India, one ship only, the Kingsmill, from Liverpool, 512 tons, having arrived at the Port of Calcutta since the renewal of the Honourable Company's modified Charter."

(B.) **1816-17.**

On the trade of this year, the Reporter remarks as follows:—"The imports from the mother country continue progressively to increase; the amount of merchandize in the year under consideration being nearly double that reported in the year 1814-15.

"By the immense influx of free traders, coming generally on the mere speculation of obtaining freights, and unprovided with funds for the purchase of a cargo, the rates of freight have progressively fallen until they have reached their present standard of about 7 *l.* per ton for dead weight and 8 *l.* for light goods.

"Another effect of the great influx of free traders has been to throw the country shipping entirely out of the competition, as far as concerns the direct traders between this country and Europe."

(C.) **1817-18.**

The Report of 1817-18 contains the following observations:—"The comparative statement of Imports from the mother country during the year 1817-18, exhibits an increase over the preceding year, which also greatly exceeded that of 1815-16, to an extent which has surpassed all calculation, and to give substantial reasons on principles of traffic for this great excess on importations of last year, would perhaps be a difficult task.

"The markets of India, during the period under report, have not warranted the least expectation that the usual articles of European Export would realize even prime cost, yet the supplies into India have continued to an extent never before known.

"The influx of European commodities since that period continuing constant and excessive, the articles have consequently been necessarily disposed of at public outcry, as well as by private contract, at prices which cannot have realized half their prime cost in England.

"Such a glut cannot be ascribed to a desire on the part of individuals here to obtain through this medium a return for goods sent from hence to England, as few who compose the mercantile community of this settlement, and who are the principal exporters of the produce of the East, have received consignments of goods on their own account to any extent worthy of remark.

"Nor does it appear that individuals resident in this country have been the greatest sufferers by the depression of the prices of Europe articles in the market of India; it can therefore only be presumed that the chief cause which has given rise to the great importations during the last commercial year from the mother country, arises from erroneous notions entertained by those speculators who, without paying attention to the quantity of goods which had been shipped for this port subsequently to the trade with the East being opened on the present extended scale, wildly persevered in adventures, without a knowledge of the probable demand or consumption."

(D.) **1818-19.**

The Report of this year contains the following observations:—"Freights are still very low, and cannot be quoted at better rates than 7 *l.* per ton for dead weight, and 7 *l.* 10 *s.* for light goods to the privileged ports in the United Kingdom. From the low rates at which freight has been procurable in the last two years we may reasonably calculate upon a reduction in the number of ships and quantity of tonnage importing from the United Kingdom, for, at the late and still existing rates, the shipowners must sail their ships at a loss of at least 2,000 *l.* upon every voyage which a ship of the burthen of 400 tons may make to India and back to London.

"Freights are lower by two-thirds and three-fourths than they have been known for the last 20 years.

"Nothing has contributed so much to reduce the shipping interest of this port to its present very depressed state as the Act of the 53d of His present Majesty, whereby the trade between the United Kingdom and her possessions in India was declared free, subject to certain conditions. The natural consequence of withdrawing the restrictions under which the intercourse between the parent state and her colonies in India had been previously conducted, has been so considerably to lower the rates of freight, as to preclude British Indian built ships from engaging in this trade, otherwise than to a great and manifest disadvantage."

(E.) **1819-20.**

On the statements of this year the Reporter remarks as follows: "In the Reports of the state of our External Trade which have annually been furnished since the opening of the trade in the year 1813, between the United Kingdom and the principal Settlements in British India, notice has been taken of the very great increase in the importations of British staples and manufactures of every description, and

at the Port of *Calcutta*, between 1793 and 1831—*continued*.

OBSERVATIONS.

and we took occasion, in the Report of the Commerce of the past year, to observe, that 'the value of merchandize imported into Calcutta from the United Kingdom had increased from sicca rupees 53,76,775 in 1813–14, to sicca rupees 1,59,44,495 in 1818–19.' It has been shown that the value of merchandize consigned to Calcutta from the free ports in the United Kingdom fell in the present year to sicca rupees 86,33,573. We at the same time stated our conviction that the supply of merchandize had gone greatly beyond the demand, and discouraged the expectation of consignments from the United Kingdom keeping pace in future with that burst for enterprize and speculation which had so peculiarly characterized the trade during the five years which had elapsed since the restrictions under which it formerly laboured had been removed."

"The period has arrived when the effects of these ill-judged excessive speculations have manifested themselves in a very considerable decrease in the consignments to this, and we may venture to say to the other presidencies of India, of almost every description of British staple and manufactured goods, entirely because those goods had been previously imported in quantities at once sufficient for the consumption of years, and not in consequence of any diminution in the demand in this country for the staples and manufactures of the parent state; indeed from the very reduced prices at which British goods are at present procurable in the Indian markets, we should infer that the consumption of them has rather increased than otherwise during the year under consideration.

"The folly, not to say the ruinous consequences, of attempting to increase trade beyond consumption, is abundantly manifest in the present state of the markets in this country, which, in consequence of the redundancy of goods on hand, are languid and depressed beyond all former example, while there is not the smallest immediate prospect of any material revival of trade to improve the aspect of commercial affairs. The present state of things has been mainly brought about by the avidity with which the trade to India was sought after by many speculative individuals who possessed more enterprize than capital, and to whom the loan of money or offer of goods upon a long credit, was a temptation not to be resisted. Such generally proved themselves to be the deluded victims of some more desperate speculators, who having means and capital to lose, were the ultimate sufferers by this system of consigning goods to foreign markets, without regard to quantity or quality. They have learned that capital *can*, as it has, provide goods; and they have equally, and to their sad cost, *now* learned that it can neither ensure consumption nor increase the natural wants of man."

(F.) 1821–22.

On the Statements of this year the Reporter remarks as follows:—"It would be perhaps assuming too much to say that, from the average of the last five years, an estimate of the future extent of our trade may be formed; they were some of them years in which the spirit of speculation outstripped all reasonable bounds, and as such are disqualified from becoming examples of the ordinary progress of trade. That the trade of India has considerably increased since it was thrown open is evident; but that Great Britain has as yet very materially benefited by this augmentation, is not so; inasmuch as the distress which is in the commercial world cannot be beneficial to a nation, and the commercial intercourse between the United Kingdom and the ports in British India can furnish many instances of individual distress arising from ill-judged speculations."

"When the trade was thrown open many a spirited adventurer engaged in it, thoughtlessly conceiving that a change in the system of our commercial intercourse with India would lead to as great and perhaps as sudden a change in the habits and prejudices of its inhabitants; they little thought how different are their ideas of comfort, convenience, and luxury, and how different their wants and habits from those of the inhabitants of Europe; these circumstances would appear to have been altogether lost sight of by those who formed such high expectations of an augmentation in the trade between India and England, and though still further facilities have been afforded to the merchants trading between the two countries, still they have been made rather from a desire to concede something to those who were suffering from a diminution in the demand upon the trade and commerce of England, than from any expectation that such a boon would lead to an increased consumption of European manufactures amongst the millions of our Indian population. Generally speaking, the consumption of the produce and manufactures of England must necessarily be regulated by the demand amongst the European residents in India, and will assuredly advance in proportion as the European population may increase.

"So long as the natives of India are in their present stage of social progress, so long as their habits and notions of the comforts and luxuries of life are so different from those entertained by the natives of Europe, the demand for its produce and manufacture must be confined to a few articles only. Our broad cloth, our metals, glass ware, and, above all, our piece goods will always find a ready sale among them."

(G.) 1824–25.

On the Statements of this year the Reporter remarks as follows:—"It will be seen by the statements which have been submitted, that the ports of Greenock, Hull, and Bristol have discontinued their trade with India. Greenock maintained it until 1822–23, when only one vessel was sent out. The port of Hull sent out only one ship to this country in 1821–22, which returned thence. One ship came here from Bristol in 1820–21 which returned to London. The trade with Liverpool, although comparatively small in the number of vessels employed in it, is very valuable, and promises permanency at least, if not increase."

(H.) 1825–26.

On the Statements of this year he remarks as follows:—"The ports of London and Liverpool only have maintained the trade with us during the past year."

(I.) 1826–27.

On the Statement of this year as follows:—"The statement shows a renewal of intercourse with Greenock and Hull, (suspended for some years,) by the arrival of one vessel from each of those ports. The interchange of trade from these places cannot, however, we fear, be steadily kept up."

(K.) 1828–29.

And on those of the year 1828–29, as follows, referring to accounts which illustrate the fact:—"Before closing our Report on the External Commerce of Bengal (generally), we submit a retrospect of the last ten years, drawing a comparison between the five years last past and the five years antecedent to that period, the aggregate result of which is a decrease in the trade both in Imports and Exports."

East India House,
August 15, 1832.

Thoˢ Fisher,
Searcher of the Records.

the Year 1830–31 have not yet been received.																			

Thoˢ Fisher,
Searcher of the Records.

Appendix, No. 31.

Articles of Produce Shipped at the Port of Calcutta, from 1793 to 1831.

Appendix, No. 31.

A RETURN of the Quantity of each Article of PRODUCE SHIPPED during each Year from 1793 to 1831, to Countries beyond the Territories of the Three Presidencies; distinguishing the Shipments from the Ports of each Presidency, and the Countries to which the Shipments were made;—so far as the same can be complied with, as follows:—

A STATEMENT showing the Quantity of each Article of PRODUCE SHIPPED during each Year from 1793 to 1831, at the Port of *Calcutta* to Countries beyond the Territories of the Three Presidencies; distinguishing the Countries to which the Shipments were made, so far as the same can be ascertained.

THE Records which have been received from *Fort St. George* and *Bombay*, do not contain materials for Returns of the Quantities of Produce Shipped at the Ports of those Presidencies during the Years above mentioned.

East India House,
15 August 1832.

J. Mill,
Examiner of India Correspondence.

Appendix, No. 31.

A STATEMENT showing the Quantity of each Article of PRODUCE SHIPPED during each Year from 1793 to 1831, at the Port of *Calcutta*, to Countries beyond the Territories of the Three Presidencies; distinguishing the Countries to which the Shipments were made, so far as the same can be ascertained.

* *The preceding Account continued.*

Notes.—In addition to the articles of produce which appear by the annexed statement to have been shipped at Calcutta for countries beyond the territories of the Three Presidencies, between the years 1793 and 1831, the following occur occasionally in the Reports of External Commerce:

Brassware,
Cardamoms,
Carthamus dye,
Cigars,
Cutch,
Dammer,
Gram and Peas,
Iron-work,
Jagree,
Lapis Lazule,
Mats,
Myrabitons,
Nux Vomica,
Tamarinds,
Tents.

The following articles also occur as having been articles of export from Calcutta, but the accounts do not afford information respecting the quantities exported; the value only is given:

Bengal paper,
Books,
Boots and Shoes,
Commercolly Feathers,
Cow Tails,
Drugs,
Gold and silver Thread,
Horn tips,
Oil of sorts,
Putcheck,
Salt Provisions,
Skins,
Tallow Candles,
Timber and Planks.

In consequence of variations in the mode of preparing the Commercial Reports in India, it has been found necessary, in several instances, to state the number of packages, chests, or other indefinite quantities, instead of maunds, pieces and other definite quantities, which are not given in the Reports between 1800-1 and 1823-24.

East India House,
15 August 1832.

Thos Fisher,
Searcher of the Records.

Appendix, No. 32.

Articles of Produce or Manufacture Imported, from 1793 to 1831.

Appendix, No. 32.

A RETURN of the Quantity of each Article of PRODUCE or MANUFACTURE Imported in each Year from 1793 to 1831, from Countries beyond the Territories of the Three Presidencies; distinguishing the Importation into the Ports of each Presidency, and the Countries from whence Imported.

THE Records which have been received from the Three Presidencies do not furnish materials for a compliance with this Order.

East India House,
15 August 1832.

J. Mill,
Examiner of India Correspondence.

Appendix, No. 33.

Foreign Articles sent into the Interior of each Presidency from 1793 to 1831.

Appendix, No. 33.

A RETURN of the Quantity of each Article of FOREIGN PRODUCTION or MANUFACTURE (including the Productions and Manufactures of the United Kingdom) sent into the Interior of each Presidency from the Ports of the Presidency, in each Year from 1793 to 1831, so far as the same can be complied with, as follows:

—(No. 1.)—

A RETURN, showing the Quantity, or in cases where Quantity could not be ascertained, the Value of each Article of Foreign Production or Manufacture (including the Productions and Manufactures of the United Kingdom) sent into the Interior of the Presidency of *Bengal* from the Port of *Calcutta,* in each Year from 1793 to 1831, so far as the same can be complied with.

—(No. 2.)—

A RETURN, showing the Quantity, or in cases where Quantity could not be ascertained, the Value of each Article of Foreign Production or Manufacture (including the Productions and Manufactures of the United Kingdom) sent into the Interior of the Presidency of *Fort St. George* from the Port of *Madras,* in each Year from 1793 to 1831, so far as the same can be complied with.

THE Returns of Internal Commerce received from *Bombay* do not state Quantities.

East India House,
15 August 1832.

J. Mill,
Examiner of India Correspondence.

Appendix, No. 33. - - - - - - -

(1.)—A RETURN, showing the Quantity, or in cases where Quantity could not be ascertained, the Manufactures of the United Kingdom), sent into the Interior of the Presidency of *Bengal* from

Tho^s Fisher,
Searcher of the Records.

Appendix, No. 34.

Articles received at the Ports of each Presidency from the Interior, from 1793 to 1831.

Appendix, No. 34.

A RETURN of the Quantity of each Article received in each Year from 1793 to 1831, at the Ports of each Presidency from the Interior of the Presidency, so far as the same can be complied with, as follows:

—(No. 1.)—

A RETURN, showing the Quantity, or in cases where Quantity could not be ascertained, the Value of each Article of Indian Production or Manufacture received in each Year from 1793 to 1831, at the Port of *Calcutta*, from the Interior of the Presidency of *Bengal*, so far as the same can be complied with.

—(No. 2.)—

A RETURN, showing the Quantity, or in cases where Quantity could not be ascertained, the Value of each Article of Indian Production or Manufacture received in each Year from 1793 to 1831, at the Port of *Madras*, from the Interior of the Presidency of *Fort St. George*, so far as the same can be ascertained.

THE Returns of Internal Commerce received from *Bombay* do not state Quantities.

East India House,
15 August 1832.

J. Mill,
Examiner of India Correspondence.

(1.)—A RETURN showing the Quantity, or in cases where Quantity could not be ascertained, the Value

Bentinck, Lord *W.* His opinion as to the settlement of Europeans in India, *Mackenzie* 193.

Bhurtpore Prize Stamp. Explanation of the accounts thereof in the account of Deferred Items, *Melvill* 2101.

BILLS OF EXCHANGE:
1. *Generally.*
2. *Territorial and Commercial.*

1. *Generally:*

Effect upon merchants of Government refusing their paper in India, *Mackenzie* 283——Difficulty as to what paper Government should accept and refuse, *Mackenzie* 285——Date at which bills from China are drawn, *Mackenzie* 602——Under what circumstances the Company might get money on their bills on the treasuries in India, *Palmer* 1336——Difficulties of arranging a plan by which the Company might remit in bills from India; which, however, might be arranged between the Government and the mercantile body, *Larpent* 1993, 1994——Course to be pursued by Government in the event of remitting large sums in bullion from India, *Rothschild* 2493.
See also *Remittances.*

2. *Territorial and Commercial:*

Territorial branch of the affairs of the East India Company in account with the Commercial branch in respect to bills of exchange drawn from India on account of interest on Indian debt, 1814—1829, *App.* p. 70——Territorial branch in account with the Commercial, in respect to bills of exchange drawn from India on account of interest on Indian debt, 1st May 1814 to 30th April 1817, *App.* p. 280.

Statement to show the rates at which bills of exchange drawn for interest of Indian debt, and on other accounts, comprised in the Remittance branch of the accounts between the Territorial and Commercial departments, have been discharged in England since 1814, and the average rate of those which remained unprovided for by remittances otherwise than through the Company's commerce, 1827—1829, *App.* p. 362–407.

Particulars of the account beween the two branches of the Company's affairs in respect to payments for bills of exchange drawn for interest on Indian debt, and provision of funds to meet such payments, under 53 Geo. 3, c. 155, drawn out so as to show the balance upon this account, without merging these transactions yearly, *App.* p. 90

Bills of Lading. Taking bills of lading of cargoes as security for remittances would be a good and safe mode of remittance for the country, *Rothschild* 2489——Through the medium of the public docks there is every facility for securing the proceeds of cargoes to persons making advances on bills of lading, *Rothschild* 2490——Amount which might be advanced should be 75 per cent., with a further guarantee from the consignee in this country, *Rothschild* 2491.

Blankets. Number shipped, 1793—1830, at the port of Calcutta, to countries beyond the territories of the three Presidencies, distinguishing each country, *App.* p. 849.

Board of Control. Unreasonable method of fixing the rates of exchange by the Board of Control, *Mackenzie* 56——Board has no power over accounts presented by the East India Company under Acts of Parliament, *Leach* 743——Except in cases provided for by Acts, *Leach* 746——Causes of difference of opinion between the Board of Control and the Court of Directors, *Melvill* 2485.

Board of Trade. Memorial of Mr. William Felkin, addressed to the Right honourable Lord Auckland, President of the Board of Trade, December 1831, relating to Bengal silk, *App.* p. 611.

Bombay. Expedition with which letters, under a good system of management, might be brought from Bombay to London, *Peacock* 1515–1521——Amount of imports and exports between Bombay and the Red Sea; probable aggregate of trade between Bombay and the two Gulfs, *Cabell* 1661——Comparative view of the cash transactions of

Bombay—continued.
Bengal, Madras and Bombay, from 1814-15 to 1828-29, *App.* p. 167——Extract from a minute of Sir John Malcolm, dated 30th November 1830, on his administration of the Bombay Government, *App.* p. 418.
See also *Cash Debt. Cash Transactions. Customs. Imports. Public Buildings. Revenue Charges. Shipping. Steam. Seade.*

Books. Quantity of books sent into the interior of the Presidency of Fort St. George from the port of Madras, 1823—1831, *App.* p. 922.

Books of Accounts. See *Accounts.*

Borax:
Calcutta:
Quantity shipped from the port at Calcutta to countries beyond the territories of the three Presidencies, distinguishing each country, *App.* p. 844.

Madras:
Return showing the quantity of borax sent into the interior of the Presidency of Fort St. George, from the port of Madras, 1793—1831, *App.* p. 920.

Boundaries of India. Security of the Indian empire, from the nature of its present boundaries, *Mackenzie* 64.

Bourbon. See *Isle of France. Mauritius.*

Bownter, Mr. Remarks by Mr. Bownter on the Persian Gulf and Red Sea, as applicable to steam navigation, for the purpose of opening a speedy communication with England and her territories in the East, *viâ* the Mediterranean, 1830, *App.* p. 737.

Bowring, Dr. (Analysis of his Evidence.)—Greater progress which has taken place in the improvement of the raw material of silk in France than in any country, 2574——It obtains in several districts higher prices than silk of Italian growth, 2574——Caused by the introduction of a new worm from China, 2576——Species of mulberry-tree cultivated most in France is the Morus Alba, 2580——Sides of the Rhone are the principal silk districts in France, 2581——Cause of preference for the white mulberry, 2583-2585——Trees are not cut, the leaves for the worms are gathered from the stems, 2587——Some species of the mulberry-tree will grow in any climate, 2588——The Morus of China a dwarf mulberry-tree, and is principally used in China, and seldom grows above the height of between six and seven feet, 2590——Effect of grafting on the trees, as compared with silk produced from ungrafted trees, 2592——Cultivation of the plant has become a primary consideration in France; capital is now much employed in its production, 2594——Only one crop a year is gathered in France, 2596——Care required in preparing the leaf for the food of the worm, 2597, 2598——Damp soil is unfriendly to the white mulberry, 2600——In Europe there are only two distinct classes of worms, 2603.
Different species of silk-worms in Europe and China, 2604-2613——Degree of heat used for hatching the eggs in France, 2620——Average produce of an ounce of eggs, 2624——Length of the life of silk-worms, 2625——Consumption of leaves by worms at different periods of their growth, 2630-2635, 2638——Difference between France and Italy in the production of silk from cocoons, 2638-2641——Improvements which have taken place in the education of the worm, 2643-2652——Amount of silk produced in France about 3,000,000 lbs., 2657——Average selling price about 17*s.* or 18*s.* per lb., 2658——France produces about three-fourths of her consumption, 2659——Raw silk of India has not succeeded in France, 2660——State of the silk trade in France as regards Oriental importation, 2661, 2662——Peculiar method of regulating purchases of silk in France, 2669, 2670——Backward state of reeling in France, 2671——Value of the application of capital to this branch of the silk manufacture, 2673——Cocoons are produced in France in six or seven weeks, 2675——There is no duty on mulberry-trees in France, but it is rated through the medium of the land-tax, 2678——Mode of destroying the chrysalis, 2680.
Names of the best works on the cultivation of the mulberry-tree and the treatment of the silk-worm, 2682——Table of the progress of the worms hatched from an ounce of eggs, from birth to the time of spinning, 2683——Evil effects produced by the reciprocity treaty between England and France, 2684——Consequences to the French merchants in their purchases of colonial produce; statement of their shipping as regards the East India trade, 2686——State of the French indigo trade, 2690——Bad state of French trade under the prohibitory system, 2694——The plan of purchasing by the East India Company not likely to be a successful one, 2695.

Bracken, Thomas. (Analysis of his Evidence.)—No objection on the part of natives of India to use European manufactures, 1795——By whom they are principally consumed, 1796——There would be no danger of combination among the mercantile houses in Calcutta if the remittance trade was in their hands, 1798——More probably it would create a spirit of competition, 1800——Former state of the mercantile houses of Calcutta, 1801——Only one which now carries on banking, as to issuing notes, viz. Alexander & Co., 1803——Native houses generally transact American business, 1806——State of trade since the present Charter, 1810——Importation into India of cotton manufactures, 1811——How far the power of remitting through China, from India, can be

Bracken, Thomas. (Analysis of his Evidence)—*continued.*

be depended on, 1821——Probability of the opium trade not being confined to Bengal supply, owing to the increase of Malwa opium, 1822——If the China trade were thrown open, and the opium monopoly destroyed, the China trade would become a regular mode of remittance to this country, 1827——Propositions for levying the duty on opium by an excise, in lieu of the way now practised, 1833——Establishment of twist mills in India; most probably unable to compete with English manufacture, 1839.

Nature of the iron made at the foundry established by Mr. Heath, 1841——At which iron can be made much cheaper than cast iron from this country, 1844——Establishment of the Gloucester mills, success of which will be the criterion for similar speculations, 1849——Manufacture of wortz, 1851——Extent of the Burdwan coal mines, 1853——Quality of coal and coke made therefrom, 1859——At Merzipore, 1864——Number of houses in Calcutta which could afford means to the Company to make remittances by bills, 1869——Company could always oppose combinations by means of remitting in bullion, 1872——Indigo trade not likely to increase considerably; present supply rather above demand, 1878——Cheapness of Bengal indigo compared with the produce of other countries, 1879——Magnificence of the establishments of silk agents; filatures more expensive than private merchants would take, 1883, 1886——The Company's silk is better than that imported by individuals, 1890——All Government interference in mercantile concerns is prejudicial, 1893——Growing demand for cotton-twist in China; jealousy of the spinners of that country in consequence, 1896——American trade with China, 1899.

Gold dust, tin and copper have been imported to Calcutta from Siam, 1907——Beneficial consequences to trade if all restrictions between this country were removed, 1910——Impossibility of the Chinese government preventing commercial intercourse, 1916——Fondness of the Chinese of opium, 1921——Nature of American trade with Calcutta, 1923——Of the French indigo trade, 1928——Taste of natives of Calcutta for wines and spirits, 1934——Drinking wine not a violation of religion, but of custom, 1938——Regulations as to the Company preventing the government of India making advances of money to mercantile houses, so stated by Sir C. Forbes, perhaps from misapprehension, 1940.

Bracken, Mr. Answers to queries proposed by the Board of Control upon subjects relating to the trade with India; relating to trade of the East India Company, and its effects; consequences of the union of government and trade; means of effecting remittances; division of Territorial and Commercial accounts; state of foreign trade with India, *App.* p. 505, 510, 518, 520, 531, 534, 540, 567, 569, 587.

Brant, Mr. Communications from Vice-consul Brant concerning the possibility of carrying on a large trade in the northern provinces of Persia by the Black Sea, *Cabell* 1641.

Brass. Return of the quantity of brass sent into the interior of the Presidency of Bengal from the port of Calcutta, 1793—1831, *App.* p. 918——Similar return for Madras, *App.* p. 920.

Brazils:

Calcutta:

Number of ships and amount of tonnage entered inwards at the port of Calcutta, between 1793 and 1831, from the Brazils, and stating the flag under which they sailed, *App.* p. 775——Also which cleared outwards from the port of Calcutta, between 1793 and 1831, to the Brazils, and stating the flag under which they sailed, *App.* p. 791.

Madras:

Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from the Brazils, and stating the flag under which they sailed, *App.* p. 804——Also which cleared outwards, between 1793 and 1831, from the port of Fort St. George, and the ports subordinate thereto, to the Brazils, and stating the flag under which they sailed, *App.* p. 816.

Bombay:

Number of ships and amount of tonnage entered inwards, between 1802-3 and 1829-30, at the ports of Bombay and Surat, from the Brazils, and stating the flag under which they sailed, *App.* p. 827——Also which cleared outwards, between 1802-3, and 1829-30, from the ports of Bombay and Surat, to the Brazils, and stating the flag under which they sailed, *App.* p. 835.

Bremen. Number of ships and amount of tonnage entered inwards at the port of Calcutta, between 1793 and 1831, from Bremen, and stating the flag under which they sailed, *App.* p. 785.

Brimstone. Return showing the quantity of brimstone sent into the interior of the Presidency of Fort St. George from the port of Madras, 1793—1831, *App.* p. 920.

Bristol. See *Shipping.*

Broad Cloth. Return showing the quantity sent into the interior of Bengal from the port of Calcutta, in each year from 1793—1831, *App.* p. 918.
See also *Dyeing.*

Buhawulpoor. Nature of the trade of, *Cabell* 1646.

Bullion. Statement of bullion imported into Calcutta by sea, distinguishing the countries, 1814-15—1826-27, *App.* p. 626——Statement of the amount of all treasure imported into and exported from the three Presidencies in India respectively, in each year from 1810-11 to the latest period, distinguishing Europe and America from China, the Eastern islands, and other principal places, exclusive of shipments from port to port, *App.* p. 630——Consequences of wars in India as to shipments of bullion in return for goods from this country, *Palmer* 1373——No country ever did or can permanently export bullion, *Palmer* 1392——Consequences to India of a continual exportation of bullion, *Palmer* 1405——Impossibility for any country to continue to furnish, politically, any payment of bullion that the produce of the country will not re-supply, *Palmer* 1414.

COMMERCIAL:

1. *Accounts.*
2. *Agents.*
3. *Establishments.*
4. *Profits.*
5. *Remittances.*

1. *Accounts:*

Statement exhibiting and explaining, as far as can be done, the difference between the account of issues in India, to Commerce, under 53 Geo. 3, c. 155, as kept in India (in receipt and disbursement statement), and the account with a similar object kept in England, from 1814–15 to 1828–29 inclusive, *App.* p. 92.

Steps taken for the separation of the Territorial from the Commercial accounts of the Company in India and England; further measures required for that purpose, *Lloyd, App.* p. 445, *Langton, App.* p. 446, *Hill, App.* p. 446, *Wood, App.* p. 446, *Mackenzie, App.* p. 446.

2. *Agents:*

Regulation for rescinding some of the rules of Regulation 31, 1793, and the corresponding rules for Benares and the Ceded Provinces, and for placing the commercial agents of the East India Company on the same footing towards natives of the country as other persons, *App.* p. 646.

3. *Establishments:*

Return of the Indian commercial establishment as new modelled by the Governor-general, 1829, *Simons* 849——Cause of increase in commercial establishments of Bengal on comparing 1816–17 with 1826–27, *Simons* 1173——Evidence concerning duties of officers

Commercial—continued.

officers of the East India Company at home and in India, *Simons* 1174——Digest of evidence given before the Select Committee of the House of Commons in 1832, on Commercial subjects; East India Company's Establishments in London and India and China, *App.* p. 483, 486.

4. *Profits:*

Appropriation thereof, *Leach* 730, 771——Surplus commercial profits of the East India Company after payment of the dividends on the capital stock, from May 1814 to May 1831, together with the amount appropriated in the same period, and showing the balance remaining unappropriated on 1st May 1831; prepared in accordance with the opinion of the Company's standing counsel, as it respects the home bond debt discharged, *App.* p. 293, 405, 410——Correspondence, &c. relating to the appropriation of the surplus commercial profits of the East India Company, *App.* p. 230——Amount appropriated of surplus profits accrued in England, from 1st May 1814 to 30th April 1817, distinguishing each year; showing also the sum remaining to be appropriated, *App.* p. 279.

5. *Remittance:*

Amount of loss which the Commercial branch is entitled to be relieved in respect to investment from India sold 1830–31, provided as a remittance to meet bills of exchange for interest of India debt under the arrangment contained in the plan 1814, for keeping the home accounts, *App.* p. 411——Amount debited and credited for supplies to the Commercial department from St. Helena, Bencoolen and Prince of Wales Island, *App.* p. 100.

See also *Bills of Exchange. Capital. Imports. Interest. Shipping. Territorial and Commercial. Trade.*

Commissions. Commissions charged by the East India Company on the sale of goods, *Simons* 1167——Lower than private merchants, *Simons* 1169——Dates at which present rates were established, *Simons* 1170——Sale of private goods entirely governed by the wishes and convenience of proprietors and consignees, *Simons* 1171.

Confectionary. Return of the quantity of confectionary sent into the interior of the Presidency of Fort St. George from the port of Madras, 1823—1831, *App.* p. 922.

Consignments. Cost of all consignments sent from England to Bencoolen, Prince of Wales Island, and Singapore and Malacca, *App.* p, 171.

Consul. Inexpediency of any establishment similar to a British consulate, as having the effect of bringing the governments into direct collision in China, *Larpent* 1948.

Contracts. See *Stores.*

Copenhagen:

Calcutta:

Number of ships and amount of tonnage entered inwards at the port of Calcutta, between 1793 and 1831, from Copenhagen, *App.* p. 774——Also which cleared outwards from the port of Calcutta, and stating the flag under which they sailed, *App.* p. 790.

Madras:

Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George and the ports subordinate thereto, from Copenhagen, *App.* p. 803——Also which cleared outwards from the port of Fort St. George and the ports subordinate thereto, to Copenhagen, and stating the flag under which they sailed, *App.* p. 815.

Bombay:

Number of ships and amount of tonnage entered inwards, between 1802–3 and 1829–30, at the ports of Bombay and Surat, from Copenhagen, *App.* p. 827——Also which cleared outwards, between 1802–3 and 1829–30, from the ports of Bombay and Surat, to Copenhagen, and stating the flag under which they sailed, *App.* p. 834.

Copper. Circulation of copper money in India, *Mackenzie* 646——Copper was formerly one of the principal exports shipped by the East India Company for India, *Simons* 875——Digest of evidence taken before the Select Committees of the House of Commons, on East India Affairs, second Report 1830, and Reports 1830-1 and 1831, on Commercial subjects; relating to Copper, *App.* p. 471——Total value of copper imported into Calcutta, 1813-14 to 1830-31, distinguishing each year, *App.* p. 516——Return showing the quantity of copper sent into the interior of the Presidency of Bengal from the port of Calcutta, 1793—1831, *App.* p. 918——Similar returns for Madras, *App.* p. 920.

Corals. Return of the quantity of corals sent into the interior of the Presidency of Fort St. George from the port of Madras, 1823—1831, *App.* p. 923.

Coriander Seed. Return showing the quantity sent into the interior of the Presidency of Fort St. George from Madras, 1793—1831, *App.* p. 920.

Corks. Quantity of corks sent into the interior of the Presidency of Fort St. George from the port of Madras, 1823—1831, *App.* p. 923.

COTTON:

1. *Agents.*
2. *Duties.*
3. *Growth.*
4. *Imports and Exports.*
5. *Piece Goods.*
6. *Trade*
7. *Twist.*
8. *Digest of Evidence before Lords and Commons.*

1. *Agents:*

Persons appointed cotton agents; manner in which they are paid for services, *Simons* 1186——Formerly paid by commission, now by salary, *Simons* 1192——Control exercised over them by the Board of Trade, *Simons* 1195——Highest emolument ever received in one year by a commercial resident, *Simons* 1207——Accounts of commercial officers in India examined by Board of Trade at Calcutta, *Simons* 1221, 1229.

2. *Duties:*

Petition of natives of India to the Right Hon. the Lords of His Majesty's Privy Council and Trade, relative to the duties on cotton and silk, *App.* p. 573.

3. *Growth:*

Cotton plant reared as an annual in India; in America is triennial, *Wallick* 2346——Bad management of the cotton plant in India, *Wallick* 2392——Necessity of proximity to the sea for the good cultivation of Sea Island cotton, *Wallick* 2395——In China the good qualities are cultivated near the sea; in Martaban the good cottons are from the sea side, *Wallick* 2395——Recommendation, 1829, that an experimental plantation should be established at the expense of Government, *Malcolm, App.* p. 668——Establishment of a farm for the purpose of improving the growth of cotton, under the care of Mr. Finney at Bombay, *Malcolm, App.* p. 669——Farms established in the Mahratta country to carry into execution a plan for introducing the cultivation of Bourbon cotton, *Malcolm, App.* p. 669.

4. *Imports and Exports:*

Total value of cotton goods imported at Calcutta from Great Britain by the private trade for 15 years, 1813-14—1830-31, *App.* p. 516——Export of British manufactures, distinguishing white and plain, printed or dyed, and cotton twist, to India and China, in the years ending 5th January 1815 to 1831, both inclusive, *Manchester Chamber of Commerce, App.* p. 515——Quantity shipped, 1793—1830, at the port of Calcutta, to countries beyond the territories of the three Presidencies, distinguishing each country, *App.* p. 851——Return showing the quantity of cotton, yarn, twist and mule twist, sent into the interior of the Presidency of Bengal, from the port of Calcutta, 1793—1831, *App.* p. 918——Quantity of cotton and cotton thread received in each year, from 1812-13 to 1829-30, at the port of Calcutta, from Bengal, *App.* p. 926——Quantity of cotton and cotton thread received in each year from 1824-25 to 1830-31, at the port of Madras, from Fort St. George, *App.* p. 928.

5. *Piece Goods:*

Statement showing the number of piece goods shipped, 1793—1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 883——Quantity or value of foreign production or manufacture sent into the interior of Fort St. George from Madras, 1823—1831, *App.* p 924.

6. *Trade:*

Disadvantages under which the Company trade in, *Mackenzie* 218——Large quantities of cotton annually shipped from Bombay and Bengal by the Company to China, *Simons* 1121——Importation into India of cotton manufactures, *Bracken* 1811——There are deficiencies in every stage of the cultivation, cleaning and packing cotton in India, *Wallick* 2399, 2400..

7. *Twist:*

Account of the quantity exported of cotton twist by the East India Company, *Simons* 954——Disturbances in China on account of the importation of cotton twist, *Simons* 954——Profit and loss upon cotton twist exported to China by the East India Company, *Simons* 1274——Establishment of twist mills in India; most probably unable to compete with British manufacture, *Bracken* 1839, 1849——Growing demand for cotton twist in China; jealousy of the spinners of that country in consequence, *Bracken* 1896.

8. *Evidence before Lords and Commons:*

Digest of evidence given before the Select Committee of the House of Lords in 1830, on Commercial subjects; Cotton, *App.* p. 454——Digest of evidence given in the Reports of the House of Commons on East India Affairs, Second Report 1830, and Reports of 1830-1 and 1831 on Commercial subjects relative to Cotton, *App.* p. 467——Of the evidence 1832, *App.* p. 491——Sort of cotton cultivated with complete success in the Company's territories, the produce originally of the West Indies, *Wallick, App.* p. 665.

Courtenay,

Courtenay, T. P. Letter from him to G. Larpent, August 1827, informing him that a despatch is ordered to be prepared, directing modifications to be made in the Bengal commercial code, *App.* p. 646——Regulation for rescinding some of the rules of Regulation XXXI., 1793, and the corresponding rules for Benares and the Ceded Provinces, and for placing the commercial agents of the East India Company on the same footing towards natives of the country as other persons, *App.* p. 646.

Courts of Justice, Native.
Might be allowed to take cognizance between Europeans, *Mackenzie* 195——With moderate salaries, Government might find natives well qualified to discharge the office of judges, *Mackenzie* 198.

Crawford, W. (Analysis of his Evidence.)—Formerly head assistant to the accountant-general in India, 2022——Result of his examinations of the accounts of the East India Company, 2025——As to the nature of the Territorial and Commercial branches, 2025—2029——Documents, as at present furnished, do not enable any one to come to correct conclusions, 2030——The union of the administration of the two departments Commercial and Territorial ought not to occasion any difficulty in the way of a correct balance sheet being made out of the separate affairs of each, 2031.

Crawford, Mr. Answers to queries proposed by the Board of Control upon subjects relating to the trade with India; relating to trade of the East India Company, and its effects; consequences of the union of Government and trade; means of effecting remittances; division of Territorial and Commercial accounts; state of foreign trade with India, *App.* p. 505, 511, 518, 531, 538, 540, 547, 568, 570, 588.

Currency. There should be one currency for all India, *Mackenzie* 312——Advantages of one currency, *Mackenzie* 642——Value of this to Government and private merchants, *Mackenzie* 313——Advantageous that a uniform coin should be received as pay for army and civil servants in India, *Mackenzie* 351——Silver should continue the currency of India, *Mackenzie* 861——Madras rupee should be used under any plan for assimilating the coin, *Mackenize* 365-367——No restriction to export of coin from India, *Mackenzie* 386.
Condition of the currency of India at the present and former periods, *Hill, App.* p. 443, *Mackenzie, App.* p. 443——Digest of evidence taken before the Select Committee of the House of Commons 1832, on Commercial subjects; relative to the Currency, *App* p. 498.
See also *Bullion. Coin. Copper. Gold.*

CUSTOMS:
1. *England.*
2. *Calcutta.*
3. *Madras.*
4. *Bombay.*

1. *England:*
Statement of the rates of duty chargeable in England on all articles the produce of the East Indies; showing the alterations of duty which have taken place on such articles since 1812; and also the rates now chargeable on similar articles imported from other countries, *App.* p. 591.

2. *Calcutta:*
Statement of the amount of customs collected on the import trade from the Arabian and Persian Gulfs, from 1821—1828, *App.* p. 633——Rates of duties chargeable on goods imported by sea into Calcutta, or any port or place belonging to the Presidency of Fort William, in British and foreign vessels, *Larpent, App.* p. 554——Rates of duty chargeable, and drawback allowed, on articles the produce and manufacture of the country, exported by sea from Calcutta, or any other port or place belonging to the Presidency of Fort William, distinguishing British and foreign vessels, *App.* p. 558.

3. *Madras:*
Statement of the amount of duties levied on the Madras territories upon goods imported from and exported to the Persian Gulf, Arabia and the Red Sea, 1821—1828, *App.* p. 636.

Statement of the amount of customs collected on the import trade from the Persian Gulf, at the port of Bombay, 1821—1828, *App.* p. 636.

D.

DEBT:
1. *Home Bond.*
2. *Territorial.*

1. *Home Bond:*
Present amount of the Company's home bond debt, which the Court of Directors consider wholly Territorial, *Melvill* 2034, 2035, 2041——Cause of the Court of Directors coming to this decision, *Melvill* 2037-2040——Amount of the bond debt 1750,

Debt—continued.

1. *Home Bond*—continued.

Melvill 2043, 2044——Acts of Parliament which have been passed upon the subject of the Company's home bond debt, *Melvill* 2046, 2047——If the Company were separated from the territory the bond debt should be a charge upon the territory, *Melvill* 2066——Specification of the sums appropriated, 1814-15—1816-17, to the reduction of the home bond debt, *App.* p. 287.

Fluctuations in prices in consequence of Government converting a remittable loan into an irremittable, *Mackenzie* 611——Territorial revenue of India has been applied in liquidation of debt, *Leach* 821——Explanation of the circumstances under which the Company would be entitled to the payment of 1,207,560*l.*, the amount of East India annuities grafted on the 3 per cent. reduced account, *Melvill* 2480.

2. *Territorial:*

Statement concerning the register Territorial debt of India, *Pennington* 14, 25——Explanation of the nature of the Territorial debt of the Company, as viewed by the Select Committee 1783, *Melvill* 2056.

Specification of the sums applied by the Court of Directors in England to the discharge of principal of India debt, from 1st May 1814 to 30th April 1817; showing the description of the notes and obligations thus paid off, *App.* p. 286.

Territorial branch of the affairs of the East India Company in account with the Commercial branch, in respect to bills of exchange drawn from India on account of interest on Indian debt, 1814—1819, *App.* p. 70.

Mode in which money has been borrowed in India by the Government since 1808-9, and what are the advantages and disadvantages of the course pursued, *Hill, App.* p. 441, *Mackenzie, App.* p. 441.

Correspondence between the Board of Commissioners for the Affairs of India and the Court of Directors of the East India Company, relative to a charge made against the Territory, for loss sustained in making remittances from India to meet bills drawn on the Court for the payment of interest on Indian debt, *App.* p. 354.

Statement for the purpose of reconciling the view given in the general cash result of the financial transactions of all India, 1814-15—1828-29, of debt incurred in that period, with the increase of debt (from cash transactions) deducible from a comparison of the quick stock accounts, 1814—1829, *App.* p. 190.

Deferred Accounts. Explanation of the account of Bhurtpore prize stamp in the account of Deferred Items, *Melvill* 2181——Explanation of the term Deferred Accounts in the Report handed in by witness, *Pennington* 2097.

Dinagpur. See *Survey.*

Diplomatic Expenses. Comparative table, showing the charges of the three Presidencies in the higher departments of the executive and diplomatic administrations, *App.* p. 413.

Discounts. Discontinued by the Bengal Bank during the Burmese war, in consequence of its reduced cash balance, *Mackenzie* 688——Particulars of interest and discount on anticipated payments (including adjustment for former years in respect to the interest charged on the Territorial revenue outward), *Leach,* p. 73.

See also *Banks,* 2.

Dividends. Manner in which remittances might be made if the Company paid only in India, *Mackenzie* 648——Dividends demandable in London, *Mackenzie* 658——Statements submitted to the Court of Directors whereupon the half-yearly dividends were declared, 1814-15—1830-31, *App.* p. 392.

See also *Bank Stock. Debt,* 1, 2.

DOCKS:

1. *Generally.*
2. *East India.*
3. *St. Katherine's.*
4. *Labour.*

1. *Generally:*

In case of the China trade being thrown open, all docks could collect the revenue upon every article deposited in the docks for the Crown at a very great saving of expense, *Hall* 2562——Manner in which the duty on tea might be collected, *Hall* 2563-2566——Difference of the management of East India Company's and docks in general, *Simons* 1166.

2. *East India:*

Expense of the East India Company's docks owing to the expense necessarily arising from the tea department, *Hall* 2512, 2537——Different manner in which the East India Company levy their rates, as compared with other dock companies, *Hall* 2514——Good management of the docks, but the charge exceeds the proportional advantage in very many instances, *Hall* 2516——Effect of the Act 56 Geo. 3, c. 56, exonerating goods sold by the East India Company from auction duty, *Hall* 2519——Agreement between the East India Company and the East India Docks is a payment of 30,000*l.* per annum for

Docks—continued.

for the use of the Docks during the existence of the Charter, *Hall* 2521——Liverpool merchants have sent goods to London by land-carriage to be sold at East India Company's sales, *Hall* 2551.

3. *St. Katherine's:*

Quantity of goods deposited in St. Katherine's Docks 1st January 1832, *Hall* 2499——Quantity of goods landed 1831, *Hall* 2500——Establishment at the docks, and annual charge on that account, *Hall* 2502——Annual expenses incidental to the management of the business of the Company, *Hall* 2503——Average amount of rent per ton for goods per year, *Hall* 2506——Return upon capital invested, *Hall* 2505–2507——St. Katherine's Dock Company could manage generally one-third less than the rate charged by the East India Company, *Hall* 2517, 2522——Comparative extent of business transacted by the East India Company as warehouse-keepers, compared with St. Katherine's Docks, *Hall* 2529——East India Company house and manage indigo in the St. Katherine's Docks, *Hall* 2539——On cotton the St. Katherine's Dock Company could do the business cheaper than the East India Dock Company, *Hall* 2545——On saltpetre and sugar they could not, *Hall* 2547——Advantages of St. Katherine's Docks for the purposes of the East India trade, *Hall* 2553, 2555——Docks contracted as to water-room, but no ship has been refused the convenience of loading out, *Hall* 2556–2559.

4. *Labour:*

Expense of labour at the East India Docks, as compared with St. Katherine's, *Hall* 2510——St. Katherine's Dock Company find no difficulty in obtaining labourers on their terms, *Hall* 2528——Manner in which East India Company pay their labourers, *Hall* 2531.

Dollars. Are generally now used as remittance; formerly they were coined for native circulation, *Mackenzie* 323——Circulation of Spanish dollars in India, *Mackenzie* 386.

Doondee. Native vessels used to navigate the Indus; description thereof; description of a zohrug, *Cabell* 1645.

Drawbacks. See *Duties.*

Drugs. Return showing the quantity sent into the interior of the Presidency of Fort St. George from the port of Madras, 1793–1831, *App.* p. 920, 921——Quantity of drugs received in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 928–9.

DUTIES:

1. *Calcutta.*
2. *England.*
3. *Petitions concerning.*

1. *Calcutta:*

Rates of duties chargeable on goods imported by sea into Calcutta, or any port or place belonging to the Presidency of Fort William, in British and foreign vessels, *Larpent, App.* p. 554——Rates of duty chargeable, and drawbacks allowed, on articles the produce and manufacture of the country, exported by sea from Calcutta, or any other port or place belonging to the Presidency of Fort William, distinguishing British and foreign vessels, *App.* p. 558.

2. *England:*

Statement of the rates of duty chargeable in England on all articles the produce of the East Indies; showing the alterations of duty which have taken place on such articles since 1812, and also the rates now chargeable on similar articles imported from other countries, *App.* p. 591——Duties on aloes, assafœtida, cardamums, coffee, pepper, sugar and tea, *App.* p. 581.

3. *Petitions concerning:*

Petition of the natives of Bengal relative to the duties on cotton and silk, *App.* p. 573——Petition from certain European and Native inhabitants of Calcutta to the House of Commons, relative to the duties levied in Great Britain on East India sugar and rum, *App.* p. 608.

See also *Cotton*, 2.

Dyeing. Broad cloths formerly dyed for the East India Company in London; practice now discontinued, *Simons* 912——Longs ells still dyed in London, *Simons* 917——Colours of which long ells are dyed, *Simons* 919——Former manner of contracting for dyeing, *Simons* 922——Dyeing long ells might be done cheaper by contracting with one or two large houses, instead of dividing it into six and thirty different portions, *Simons* 1236——Manner in which circulars are distributed for contracts for dyeing long ells in London, *Simons* 1246——Dyeing are the only woods imported into China besides rattans, *Wallick* 2380.

Return of the quantity of dyes sent into the interior of the Presidency of Fort St. George from Madras, 1823–1831, *App.* p. 921.

E.

Earthenware. Return of the quantity of earthenware sent into the interior of the Presidency of Fort St. George from the port of Madras, 1823—1831, *App.* p. 923.

East India Company, Effects of the Trading of. Objections to the East India Company remaining traders, *Mackenzie* 214——Evidence concerning the means by which the Company might, on abandoning trade, transmit a large fund from India to England, *Palmer* 1345——No effect to be apprehended by the Company from combination of merchants, as exports to India and China must furnish means of remittance, *Palmer* 1348——Anxiety of merchants in London that the East India Company should cease to trade, *Larpent* 1989——If the Company were separated from the territory, the bond-debt should be a charge upon the territory, *Melvill* 2066——Opinions as to the rights of the Company to the property in lands acquired under their authority, as given by the law-officers of the Crown, *Melvill* 2073, 2074——Right of the Company to the possession of their property in India, even should Parliament not renew their charter, *Melvill* 2081–2083.

Practical effects of the union of Government with trade in India, *Liverpool East India Com. App.* p. 519, *Sullivan, App.* p. 519, *Manchester Cham. Com. App.* p. 520, *Glasgow Cham. Com. App.* p. 520, *Mackillop, App.* p. 520, *Bracken, App,* p. 520, *Larpent, App.* p. 524, *Rickards, App.* p. 527.

See also *Government. Officers. Pensions.*

East India Docks. See *Docks,* 1.

East India House and Warehouses, value thereof, *Simons* 872.

Elephants. Improvements recommended in the growth of trees for the food of elephants, *Wallick* 2443.

Elephants' Teeth. Quantity shipped from 1793 to 1830, at the port of Calcutta, to countries beyond the territories of the three Presidencies, distinguishing countries, *App.* p. 856——Quantity of elephants' teeth received in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 926.

Embroidered Silk. Statement of the quantity of pieces of embroidered silk goods shipped, 1793—1830, at the port of Calcutta, to countries beyond the three Presidences, distinguishing countries to which shipments were made, *App.* p. 890.

Establishments. See *Commercial,* 3.

Euphrates. Arrangements which might be made to facilitate communications between India and Europe by the Euphrates, *Peacock* 1475——General state of the navigation of the Euphrates, *Peacock* 1476——Boats which navigated the river in the time of Herodotus, *Peacock* 1486——Strength of the stream, *Peacock* 1489——This passage would be the best if it could be rendered safe from the people, *Peacock* 1500——Routes by the Euphrates cheaper than by the Red Sea, *Peacock* 1525.

See also *Steam.*

Europeans. Advantageous results likely to arise from the settlement of Europeans in India, *Mackenzie* 89, 93, 113, 186, 190, 191, 298——Residence of Europeans would, instead of danger, occasion additional security, *Mackenzie* 93–99——Classes of persons whom witness would allow to settle in India, *Mackenzie* 109——Difficulties which now deter persons from going to India as residents there from sending home for others, *Mackenzie* 110——In Bengal all persons should be allowed to settle who preferred it; in other provinces restrictions should be made, *Mackenzie* 111——Principal objects which prevent Europeans of character from settling in India, *Mackenzie* 116——Small extent to which Europeans held lands in India when permitted, *Mackenzie* 118——Lord W. Bentinck's opinion as to the settlement of Europeans in India, *Mackenzie* 193——Sir C. Metcalfe's opinion of Europeans residing in India, *Mackenzie* 194.

Exchange, Rates of. Unreasonable method of fixing the rates of exchange by the Board of Control, *Mackenzie* 56——Correspondence, &c. relating to the rate of exchange at which the currencies of India are converted into sterling, in the account between the Territorial and Commercial branches of the affairs of the East India Company, *App.* p. 294.

See also *Bills of Exchange.*

Expenditure. See *Revenue.*

6. *Settlements.*

1. *Generally:*

Commencement of large remittances in indigo to this country by the Company, *Simons* 1027——Average remittance per sicca rupee made in indigo since 1819, *Simons* 1038——Disadvantage to commercial transactions, owing to the Company trading, as at present, largely in indigo, *Palmer* 1377——Indigo trade not likely to increase considerably; present supply rather above demand, *Bracken* 1878——Cheapness of Bengal indigo compared with the produce of other countries, *Bracken* 1879——State of the French indigo trade with Calcutta, *Bracken* 1928, *Bouring* 2690——Great improvements have taken place in the indigo districts since the introduction of the Europeans, *Wallick* 2344——Improvements in the cultivation of indigo from the introduction of European skill and capital, *Wallick* 2419——Manner in which indigo and other Indian goods are imported into France, *Hall* 2526——East India Company house and manage indigo in the St. Katherine's docks, *Hall* 2539——Management of indigo which comes under witness's inspection is made with a greater degree of extravagance than ought to be done, *Hall* 2540——Reasons why merchants prefer the management of indigo being in the East India Company, *Hall* 2546.

2. *Digest of former Evidence:*

Digest of evidence given before the Select Committee of the House of Lords 1830, on Commercial subjects; relating to indigo, *App.* p. 453——Digest of evidence given in the Reports of the Select Committees of the House of Commons on East India Affairs; Second Report 1830, and 1830–31 and 1831, on Commercial subjects (relative to Indigo), *App.* p. 465——Of the evidence 1832, *App.* p. 492.

3. *Import:*

Account of the quantity of indigo imported into Great Britain and Ireland in each year from 1780 to the latest period up to which the accounts can be made, specifying the countries from which imported, *App.* p. 640——Quantity of indigo seed received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 929——Quantity of indigo received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 927——Statement showing the quantity of indigo shipped, 1793—1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 872.

Indigo—continued.

4. *Produce:*

Statement of the annual produce of East Indian indigo for 20 years, commencing 1811 and ending 1830; also the annual consumption during the same period, computed by an average of four years, and the stocks in the public warehouses at the close of each year, *App.* p. 535.

5. *Purchase:*

Consequences of the Government purchases of indigo on the market, *Mackenzie* 221 ——Manner in which Company's purchases of indigo are made, *Simons* 1024——Nature of Company's purchases as compared with private contracts, *Simons* 1029——Statement from 1821 to the present time, of the amount of indigo bought by the Company in maunds, the price, and the stock in London, at corresponding periods, *Larpent* 1976——Injuries which have accrued to individuals in consequence of the dealings of the Company in indigo, *Larpent* 1983——Quantity of indigo purchased by the Government in comparison to the private trade, *Larpent* 1984——Interference of the Company in the trade settles the prices, *Larpent* 1986–1988.

6. *Settlements:*

Advantages to peasantry generally of indigo settlements, *Mackenzie* 146.

Indo-Britons. See *Half-Castes.*

Indus. Impediments thrown in the way of navigating the Indus, owing to the heavy duties levied by the chiefs on the river, and the unsettled state of many parts of the country, *Cabell* 1642——Advantages which would result from opening the navigation of the Indus, *Cabell* 1643——Information as to the inland navigation of the Indus; description of boats necessary for the navigation of the river; description of Doondee native vessels; narrative of a journey up the river; nature of the tides, *Cabell* 1645——There are few rivers where steam might be used with better effect than on the Indus, *Cabell* 1648.

See also *Steam.*

Insurrection in India. Extent to which danger is to be apprehended from insurrection in India, *Mackenzie* 61——Which most probably would arise only from bad government, *Mackenzie* 63——Security of the Indian empire from its present boundaries, *Mackenzie* 64.

Interest. Particulars of interest and discount on anticipated payments (including adjustment for former years in respect to the interest charged on the Territorial invoices outward), *Leach* p. 73——Particulars of interest on balance due from the Territorial to the Commercial branch, 1827–28, *Leach,* p. 74——Question of interest charges has always been under discussion between Board of Control and Court of Directors, *Leach* 833——All accounts have been settled as a provisional adjustment, subject to the determination of certain questions, *Leach* 838——Manner in which interest ought to be charged on borrowed capital for trading purposes, *Simons* 1049——Fluctuation in interest of money in India, *Mackenzie* 604, 613——No interest allowed by Bank of Bengal on deposits, *Mackenzie* 610.

Correspondence relative to the charge of interest on the balance due from the Territorial to the Commercial branch of the East India Company's affairs, *App.* p. 312.

See also *Banks,* 2. *Bills of Exchange,* 2. *Debt.*

IRON:

1. *Generally.*
2. *Calcutta.*
3. *Manufactured in India.*

1. *Generally:*

Digest of evidence taken before the Select Committees of the House of Commons on East India Affairs, Second Report 1830, and Reports 1830–31 and 1831, on Commercial subjects; relating to Iron, *App.* p. 471——Of the evidence 1832, *App.* p. 494.

2. *Calcutta:*

Return showing the quantity of iron sent into the interior of the Presidency of Bengal from the port of Calcutta, 1793—1831, *App.* p. 918——Similar return for Madras, *App.* p. 920——Total value of iron imported into Calcutta from Great Britain, 1813-14 to 1830–31, distinguishing each year, *App.* p. 516.

3. *Manufactured in India:*

Nature of iron made at the foundry established by Mr. Heath, *Bracken* 1841——At which iron can be made much cheaper than cast-iron from this country, *Bracken* 1844.

Ironmongery. Quantity of ironmongery received in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 929.

Isle of France and Bourbon. Number of ships and amount of tonnage entered inwards, between 1802–3 and 1829–30, at the ports of Bombay and Surat, from the Isle of France and Bourbon, *App.* p. 828——Also which cleared outwards, between 1802–3 and 1829–30, from the ports of Bombay and Surat, to the Isle of France and Bourbon, and stating the flag under which they sailed, *App.* p. 837.

Issues in India. Statement exhibiting and explaining the difference between the accounts of issues in India to Commerce, under 56 Geo. 3, as kept in India (in receipt and disbursement statements) and the accounts, with a similar object, kept in England, 1814–15—1828–29, *App.* p. 92.

Ivory:

Calcutta:

Number of elephants' teeth shipped, from 1793 to 1830, at the port of Calcutta, to countries beyond the territories of the three Presidencies, distinguishing each country, *App.* p. 856.

Madras:

Quantity of ivory received in each year from 1824–25 to 1830–31, at the port of Madras, from the Presidency of Fort St. George, *App.* p. 930.

Ivory Boxes. Quantity of ivory boxes received in each year from 1824–25 to 1830–31, at the port of Madras, from the Presidency of Fort St. George, *App.* p. 930.

J.

Java:

Calcutta:

Number of ships and amount of tonnage entered inwards at the port of Calcutta, between 1793 and 1831, from Java, *App.* p. 780——Also which cleared outwards from the port of Calcutta, between 1793 and 1831, to Java, and stating the flag under which they sailed, *App.* p. 797.

Bombay:

Number of ships and amount of tonnage entered inwards, between 1802–3 and 1829–30, at the ports of Bombay and Surat, from Java, *App.* p. 830——Also which cleared outwards, between 1802–3 and 1829–30, from the ports of Bombay and Surat, to Java, and stating the flag under which they sailed, *App.* p. 837.

Java and Moluccas:

Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from Java and Moluccas, and stating the flag under which they sailed, *App.* p. 807——Number of ships and amount of tonnage cleared outwards, between 1793 and 1831, from the port of Fort St. George, and the ports subordinate thereto, to Java and Moluccas, and stating the flag under which they sailed, *App.* p. 819.

Johanna. Number of ships and amount of tonnage entered inwards at the port of Calcutta, between 1793 and 1831, from Johanna, and stating the flag under which they sailed, *App.* p. 785.

Johnston, Lieutenant *James Henry.* (Analysis of his Evidence.)—Description of the Enterprise, 1663——Expense of fitting out the vessel, 1665——Description of the voyage made to Calcutta, 1668——Nature of the employment of the vessel by the East India Company on arriving in India, 1689, 1699——State of Amherst Harbour, 1697——Saloween river navigable for steam-vessels, 1698——Steam-vessels peculiarly applicable for Government services in India, 1707——Nature of Burdwan coal; coal from New South Wales does not answer so well for steam-boats, 1710——Expense of steam-vessels in India; reductions which might be effected therein, as compared with the Enterprise, 1714——Regulations necessary to facilitate steam voyages from England to India, 1716——Depôts for coal which would be required; stations proposed for this purpose, 1717——Under the circumstances stated by witness the voyage might be performed in 80 days, 1718——Plans for adapting steam-engines to the towage of merchant-vessels, 1721.

[Second Examination.]—Expense at which navigation between Bombay and Suez might be maintained, 1726——The vessels should be built in this country, 1727——It might ultimately answer as a mercantile speculation, 1728——And become the medium of carrying letters, 1729——Principal returns might be expected from passengers, and packages, 1729——Navigation of the Hugh Lindsay; alterations necessary in the coal stations, 1729——British trade with the East Indies would not be materially assisted by a canal uniting the Red Sea with the Mediterranean, 1730——Advantages of steam navigation in the interior of India, 1737——Amount of Government demand for internal water-carriage, 1747——Comparative advantages of steam-boats and the present system of native craft on the rivers, 1750——System of navigating European rivers by steam, 1753——There are four steam-vessels, belonging to private companies, now in India, which do not pay their expenses, 1757——Owing to the expense of repairs, 1759——Effect of the institution of castes among Hindoos upon labour, 1762——Advantages which would result from employing the Indo-British or half-caste population in mechanics, 1766——Aptitude of this class to mechanical labours, 1770——Nature of coal found in the Persian Gulf, Cutch and Burdwan, 1773——Of new coal mine in

Johnston, Lieutenant *James Henry*. (Analysis of his Evidence)—*continued*.

Bhaugulpoor, 1775——Causes of its being cheaper to send coal from this country to Bombay rather than to ship it from Calcutta, 1779——Expense of navigating the Enterprise steam-vessel is now about 3,000 rupees per month, exclusive of fuel, 1788——Expense per mile of coals for a steam-boat in India, 1792.

Johnston, Captain. Letter from Captain Johnston to G. R. Greenlaw, Secretary to the Marine Board at Bengal, on steam communication with India, *App*. p. 719.

Judicial Departments. Advantages of employing natives in the lower judicial departments, *Mackenzie* 83——With moderate salaries, Government might find natives well qualified to discharge the office of judges, *Mackenzie* 198.

Jute Rope. Statement showing the quantity of jute rope shipped, 1793—1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App*. p. 875.

K.

Katherine, St. See *Docks*, 3.

L.

Labour. See *Docks*, 4.

Lac Dye. Plants which produce lac dye; improvements in the extraction of the dye, *Wallick* 2432-2439.

Digest of evidence taken before the Select Committees of the House of Commons on East India Affairs, Second Report 1830, and Reports 1830-31 and 1831, on Commercial subjects; relating to Lac dye, *App*. p. 471——Of the evidence 1832, *App*. p. 493——Quantity of lac dye and shell lac imported into Great Britain, 1814 and 1828, *Crawford*, *App*. p. 513.

Statement showing the quantity of lac dye, shell lac, stick lac and seed lac shipped, 1793—1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing the countries to which shipments were made, *App*. p. 877.

LANDS IN INDIA:
1. *Advances*.
2. *Fertility*.
3. *Settlement of*.
4. *Tenure*.

1. *Advances*:

Large extent of cultivation carried on with borrowed capital, *Mackenzie* 127——East India Company do not advance money to cultivators, *Mackenzie* 128——Country bankers are those who advance money to cultivators, *Mackenzie* 130.

2. *Fertility of*:

Superficial nature of the soil in India, generally not more than six inches deep, *Wallick* 2332——Nature of the soil in Bengal, *Wallick* 2334——India generally inferior to no part of the world in fertility of soil and richness of produce, *Wallick* 2335, 2337——Soil of India equal to the Isle of France with regard to sugar, coffee and cotton, *Wallick* 2336.

3. *Settlement of*:

Advantages to be derived from a general settlement of land; plan proposed by witness, *Mackenzie* 100——Nature of land revenue in India, *Melvill* 2078.

4. *Tenure*:

Opinion as to the right of the Company to the property in lands acquired under their authority, as given by the law officers of the Crown, *Melvill* 2073, 2074——Right of the Company to their property in India, even should Parliament not renew their Charter, *Melvill* 2081-2083——Small extent to which Europeans held lands in India when permitted, *Mackenzie* 118.

Langton, Mr. (Answers to queries from the India Board.)—Principal causes which have effected the revenues of India since 1808-9, either by improvement or deterioration of old, or the introduction of new resources, *App*. p. 428——Causes which have effected the amount of charge in the various departments of Indian administration, *App*. p. 431——Measures suggested for rendering the existing revenue more productive, and for realizing them more regularly, *App*. p. 436——Measures suggested to reduce charges falling on the Indian revenue, and introduce economy, *App*. p. 439——Steps taken for the separation of the Territorial and Commercial accounts of the Company in India and England; further measures required for that purpose, *App*. p. 446——Loss or waste which may have happened since 1808-9; how far the system of accounts is calculated to guard against loss, and compel the bringing to account public money or stores received and expended, *App*. p. 447.

Langton, Mr. (Answers to Queries from the India Board)—*continued*.

Answers to queries proposed by the Board of Control upon subjects connected with the trade of India; measures suggested, as calculated to advance the interests of Indian commerce, such as the improvement or increase of the exportable productions of India, &c., *App.* p. 586.

Lanterns. Number of lanterns sent into the interior of the Presidency of Fort St. George from the port of Madras, 1823—1831, *App.* p. 928.

Larpent, G. de H. (Analysis of his Evidence.) Explanations of a statement laid before the Committee concerning the trade between this country and China, 1941——To what extent the trade of China may be thrown open, the only question being the possible collision between the private purchasers and the Chinese sellers of tea in an entirely open trade, 1942–1974——East India Company should enjoy no monopoly, except on the sole ground of its being dangerous to the existence of the trade to remove the restriction, 1943——Advantages, considering the nature of the Chinese, of a united body like the Factory at Canton, to negotiate with the Hong, 1946——Inexpediency of any establishment similar to a British Consulate, as having the effect of bringing the governments into direct collision, 1948——Company remitting home from India by taking bills, and security on goods, would be inoperative to any extent, 1950——Unnatural stimulus given to the growth of indigo, owing to the remittance trade of the East India Company, 1952——Advantages which would result from a correct balance sheet of the Commercial and Territorial Departments being made out of the separate affairs of each, 1957–1961.

Terms on which the Indian government might be supplied with stores in India by contract, 1962–1965——Inaccuracies in the silk accounts laid before the House of Commons, 1966——If the Company gave up the silk trade, and their factories, individuals might be found who would be inclined to take them, 1968——Company's silk better in quality than any other, 1969——Trade with India is practically open, except in such particulars as are connected with political circumstances, 1973——Measures adopted by the India government, rendering competition with the Company in mercantile pursuits less difficult, 1975——Statement, from 1821 to the present time, of the amount of indigo bought by the Company in maunds; the price, and the stock in London, at corresponding periods, 1976——Very little trade has been carried on latterly by the Company, their only object being remittance, 1977–1982——Injuries which have accrued to individuals in consequence of the dealings of the Company in indigo, 1983——Quantity of indigo purchased by the government in comparison to the private trade, 1984.

Interference of the Company in the trade settles the prices, 1986–1988——Anxiety of merchants in London that the Company should not trade, 1989——Difficulties of arranging a plan by which the Company might remit in bills from India, which, however, might be arranged between the government and the mercantile body, 1993, 1994——Difficulties of attempting any trade with China independent of the East India Company, 1998——Necessity for caution in any steps taken towards effecting a free trade, 2000, 2001——Want of necessary information to decide upon the question, 2001.

Possibility of the Chinese levying an export duty on tea, 2002——Smuggling trade on the coast of China should not be permitted, 2004——Trusting for supply to smuggling would be a very short-sighted policy, 2006–2008——Value of a monopoly to meet the effects of the Chinese policy, 2013——Witness's object to prohibit the import of tea into any port of Great Britain or the British settlements, except such as may be purchased at or shipped from the port of Canton through the agency of the East India Company, 2017.

Answers to Queries proposed by the Board of Control upon subjects relating to the trade with India; the trade of the East India Company, and its effects; union of government and trade; means of effecting remittances; division of Territorial and Commercial accounts; foreign trade with India, *App.* p. 505, 506, 532, 524, 535, 548, 572, 573——Letter to T. P. Courtenay, dated 1827, *App.* p. 643.

Leach, William. (Analysis of his Evidence.)—Nature of the business of the Accountant Department of the East India Company, 690——Estimates for the three Presidencies for 1828–29, 697——Nature of accounts transmitted from India to the East India Company, 701——Accounts between Commerce and Territory, 710——Appropriations of commercial profits, 730——Board of Control have no power over the East India Company as to accounts presented by the latter under Acts of Parliament, 743——The Board having no control over the proceedings of the Company except in cases provided for by Act of Parliament, 746.

Account of profit and loss upon all goods sold by the East India Company in 1828–29, distinguishing India and China, and specifying the invoice price and the several charges respectively; also sale amount; showing likewise proceeds of the commerce in Great Britain; converting prime cost of investment, so far as it consists of repayments of advances by the Commercial Department, at rates of exchange used in Company's books in transactions between the two branches of their affairs, p. 72.

Particulars of interest and discounts on anticipated payments (including an adjustment for former years, in respect to the interest charged on the Territorial invoices outward), p. 73.

Particulars of interest on the balance due from the Territorial to the Commercial branch, end of session 1827–28, p. 74.

Leach, William. (Analysis of his Evidence)—*continued.*

Particulars of surplus Commercial charges beyond 5 per cent. charged on sales, p. 74. Appropriation of surplus Commercial profits, 771——Difficulty of settling questions between Commercial and Territorial claims, 774——Origin of East India annuities, 806——Difficulty of separating the Territorial and Commercial accounts prior to 1814, 809——Since 1824 there has been no Commercial surplus equal to the Territorial debt, 812——Territorial revenue in India has been applied to the liquidation of debt, 821——Question of interest charges has been a case of discussion between the Board of Control and the Court of Directors, the Court's mode of charging being objected to as an erroneous principle, 833——Hitherto all accounts have been settled as a provisional adjustment, subject to the determination of certain questions, 838.

Lead. Return showing the quantity of lead sent into the interior of the Presidency of Bengal, from Calcutta, 1793—1831, *App.* p. 918——Similar returns for Madras, *App.* p. 920.

Leghorn. Number of ships and amount of tonnage entered inwards at the port of Calcutta, between 1793 and 1831, from Leghorn, *App.* p. 785–6——Also which cleared outwards from the port of Calcutta, between 1793 and 1831, to Leghorn, and stating the flag under which they sailed, *App.* p. 801.

Leith. See *Shipping.*

Letters. Expedition with which letters might, under a good system of management, be brought from India, *Peacock* 1515, 1521.

Licenses. Regulation as to travelling licenses merely nominal, *Peacock* 1621.

Liquors. Return showing the quantity of liquors sent into the interior of the Presidency of Bengal from the port of Calcutta, 1793—1831, *App.* p. 919.

Liverpool East India Committee. Answers to queries proposed by the Board of Control upon subjects relating to the trade with India; the trade of the East India Company, and its effects; consequences of union of government and trade; means of effecting remittances; division of Territorial and Commercial accounts; foreign trade with India, *App.* p. 505, 516, 519, 532, 534, 539, 543, 567, 569, 578.

Liverpool. See *Shipping.*

Lloyd, Mr. Answers to queries proposed by the Board of Control upon subjects connected with the trade of India; modes and terms on which remittances have been effected between England and India, or India and England, and between places of commerce in India and Asia; to what extent of regularity operations of foreign exchange and remittance are conducted, &c., as far as relates to the East India Company, *App.* p. 538, 539——Are there any, and what, benefits derived by the revenues of Great Britain from the present system of conducting the trade with India and China, which would be lost by a change of system, *App.* p. 569, 570——Measures suggested calculated to advance the interests of Indian commerce, such as the improvement or increase of the exportable productions of India, *App.* p. 587.

Loans. Manner in which lending money is affected by the prior claim of the East India Company, *Mackenzie* 124——Mode and upon what terms money has been borrowed in India by the government since 1808–9, and what are the advantages and disadvantages of the course pursued, *Hill, App.* p. 441, *Mackenzie, App.* p. 441.
See also *Debt.*

London. See *Shipping.*

London Merchants. See *Merchants.*

Long Ells. General loss on the trade of long ells, but great profit in the season 1829–30, 1830–31, owing to the great fall in the price of wool, *Simons* 1254——Advantage possessed by Americans in their sale of camlets arises from their smuggling trade, *Simons* 1266.
See also *Dyeing.*

Long Pepper and Roots. Quantity of long pepper and roots received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 927.

Losses. Account of all sums written off as losses, and of all outstanding balances, in the books of the several commercial agents, from 1809–10 inclusive, to 1828–29, on account of the investment of raw silk, *App.* p. 527.

M.

Macao. Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from Macao, *App.* p. 813——Also which cleared outwards, between 1793 and 1831, from the port of Fort St. George, and the ports subordinate thereto, to Macao, and stating the flag under which they sailed, *App.* p. 825.

Mackenzie, Holt. (Analysis of his Evidence.)—Offices held by witness in India, 30——Nature of the duties of Territorial Secretary in Bengal, 32——The statements laid before the House by His Majesty's command, and which witness has studied, with Mr. Melvill's explanations, do not seem sufficient to enable the Committee to obtain a complete view of the financial transactions of the East India Company during the period they embrace, 36——Manner in which the accounts laid before Parliament are defective, 37——An account for the Committee ought to be completely balanced to a shilling, any other accounts are insufficient, 41——Indian accounts are so kept; manner of keeping remittance accounts, 43——Territorial revenues have never been sufficient to meet Territorial charges, during witness's residence in India, 50——Caused by an increase of charge in all the departments, 54——Witness cannot be satisfied that the accounts are accurately balanced without more detail, 53——Unreasonable method of fixing the rates of exchange by the Board of Control, 56——Practicability of India to bear its own expenses, 57——Extent to which danger is to be inferred from the possibility of internal insurrection, 61——Which most probably would arise only from bad government, 63.

Security of the Indian empire from the nature of its present boundaries, 64——Difficulty of making any calculation as to the reserves necessary for maintaining internal peace in India, 67——Government cannot long continue without interference with such protected States as the King of Oude, 67——and Hydrabad, 69——Estimate for 1830–31 of the revenues of India, which affords good ground for calculating on a satisfactory state of things hereafter, 71——Substitution of Native for European agency would be valuable in effecting reductions in expenditure, 71, 81——Advantageous results to the country of withdrawing all transit duties, and effecting custom duties in lieu thereof, 73, 79——Abkaree duties a growing revenue, though collected at considerable expense, 78——Advantages of employing natives in the lower judicial departments, 83——Natives are quite equal to Europeans in talent, and the finances would be much improved by their employment, 87——Advantageous results likely to arise from the settlement of Europeans in India, 89, 93——Use of English fashions and luxuries have increased among natives, 90.

Manufacture of sugar might be extended by proper culture, 91——Residence of Europeans would, instead of danger, occasion additional security, 93——Effect on the interest of money, 94——Increase of revenue, 99——Advantages to be derived from a general settlement of land; plan proposed by witness, 100——Classes of persons whom witness would allow to settle in India, 109——Difficulties which now prevent persons from going to India, or residents there from sending home for others, 110——In Bengal all persons should be allowed to settle who preferred it; in other provinces restrictions should be made, 111——Further advantages of European settlement in India, 113——Character of Bengal zemindars, 114——Nature of their education, 115——Principal objects which prevent Europeans of character establishing themselves in India, 116.

Small extent to which Europeans held lands in India when permitted, 118——Manner in which lending money is affected by the prior claim of the East India Company, 124——Large extent of cultivation carried on with borrowed capital, 127——East India Company do not advance money to cultivators, 128——Country bankers are those who advance money to cultivators, 130——Limitation of interest of money in India, 140——Extortion of zemindars, 143——The peasantry have no practical remedy against the zemindar's oppression, 144——Advantages to peasantry generally of indigo settlements, 146——Demoralized state of inhabitants of Calcutta from their intercourse with Europeans, 147.

[Second Examination.]—Financial result of a scheme which provides for a governor-general and four subordinate governments in India; would be a saving of 100,000 *l.* instead of increasing expense, 148——Manner of conducting the business of Bengal in the absence of the Governor-general, 151——Reductions to be effected, 152——Which would leave the Government quite efficient if the principle of substituting native agency were duly appreciated, 153——As offices lapse, savings in India can be speedily managed, 154——Savings proposed to be effected in the Military Department, 159——Advantages which would result from the army being transferred to the Crown, 169——Additional revenue which might be created, by the influx of Europeans to India, to the Government, 186——Consequences as to judicial establishments, 191——Lord W. Bentinck's opinion as to the settlement of Europeans in India, 193——Sir C. Metcalfe's opinion on the same subject, 194——Native courts might be allowed to take cognizance between Europeans, 195——With moderate salaries, Government might find natives well qualified to discharge the office of judges, 198——Expense of the college of Haileybury might be entirely saved, 200——Expense of the military college, Addiscombe, might also be saved, 202——College in Calcutta is also unnecessary, 207.

Explanations as to the manner of the sum of 1,300,000 *l.* being carried to account by Mr. Melvill, 209——Objections entertained by witness to the East India Company remaining traders, 214——Manufacture of opium and salt is a matter of revenue, not trade; no change could be made without immense loss to revenue, 215——Evil consequences of the purchase of cotton by the Company, 218——Dearness or inferiority of quality must be apprehended as the consequence of all commercial transactions in which the Government engage, 218——Consequences of the Government purchases of indigo on the market, 221——Necessity of a larger supply of opium at a reduced price, 231——The monopoly is a great evil, as far as the commerce of the country is concerned, 232——It cannot be necessary for the Company to trade to make remittances, 234——

Mackenzie, Holt. (Analysis of his Evidence)—*continued.*

No difficulty, on the score of remittance, by the East India Company discontinuing trade, 236——For the supply of stores, the Indian government had better have recourse to the English market than trust to the local market of India, 240——Average amount of stores from England for the Company, 242——India can never want the means of furnishing remittance, if the Government have funds to remit, 244.

India is the best market for opium in the world, 254——Opium will always afford the Government means of remittance through China, 255, 256——Manner in which China pays for opium, 259——Extent to which trade and remittances might be effected by changes in the trade between India, China and this country, 261——No fear to be entertained of a monopoly of Calcutta merchants combining to interfere with the East India Company's remittances, 266——Present state of trade in Calcutta as regards merchants' houses, 267——Merchants' houses not more dependent on Government in India than here, 269——Manner of managing the business of remittance in India, 274——Disadvantage to India paying three millions annually to this country, 278——Manner in which remittance might be made by bills, 279——Effect upon merchants' houses of Government refusing their paper, 283——Difficulty as to what paper the Company should take and refuse, 285.

[Third Examination.]—Opium exported to China is paid for in China with bullion, except that portion which is paid for in Company's bills, 290——Large increase in the opium trade attributable to the increased demand of the Chinese, 292——Great fall in the price of opium, 294——Principally from the competition of Malwa opium, 295——Company can only derive a permanent revenue from opium by being able to supply cheaper than from other countries, 296——Facility of remittance from India would be increased by increasing the commercial operations between the countries, 297——And allowing Europeans to hold lands in India, 298——Variations in amounts of Company's remittances, 300——Administration of the government of Ceylon might be placed on a more economical system if connected with the government of India, 302——Probability of the Company possessing sufficient revenue in case of war, 303——How far the question of remittance might be affected by opening the China trade, 306——How far the Company might discharge claims on them in India, in lieu of remittance to London, 310——There should be one currency for all India, 312——Value of this to Government and private merchants, 313.

Sicca rupees and mohurs are legal tenders in Calcutta; value of gold, 317——Dollars are generally now used as remittance, formerly they were coined for native circulation, 323——Time for which sicca rupees have been legal tender in Bengal; different rupees in circulation, 325——Present law in regard to recoinage of silver, 328——As to rupees being a legal tender, 335——Out of the Company's territories each government has its own rupees, 338——Value of which is continually fluctuating; 341——Feruckabad rupee has extended in circulation considerably, 344——It would be advantageous in every point of view that a uniform coin should be received as pay for army and civil servants in India, 351——Value of Madras rupee as compared with Bengal, 355——Of the Bombay, 356——Silver should continue the currency of India, 361——Madras rupee should be used under any plan for assimilating the coin, 365-367——Amount of seignorage which should be allowed on coinage in India, 373——Punishment for forgery in India, 377——Silver imported into Bengal, 380——Circulation of Spanish dollars in India, 383——There is no restriction on export of coin from India, 386.

First establishment of a government bank in Bengal in 1809, 389——Great convenience to the community, 391——Is a bank of discount and deposit, 400——Reasons why the government of India have not allowed of other banks being formed, 407——Advantage which the public derived from the Company's connection with the Bengal Bank, 409——Constitution of the bank, 411——Company never received advances from the bank except during the Burmese war, 430——Losses to which the bank has been subject, 435——Loan to Government at the Burmese war, 444-447——Connection between the bank and Government, 451——Alterations in the charter of the bank, 462——Credit of the Indian Government, 472——Saving might be effected by the Indian Government making the Bank of Bengal an engine for government payments, 482——Refusal of a charter to the Bank of Bombay, 484——Advantages possessed by the Bank of Bengal over other banks, 489——Manner in which the Bank of Bengal makes advances, 497——Dividends payable upon bank stock, 503——Prices of bank stock, 506——Amount of paper of the bank habitually out, 511——Circulation of the paper, 516——Restrictions at present on the bank, 523——Private banks at Calcutta which issue paper, 529——Effect of the stoppage of Palmer's bank on the credit of banks generally, 537——Public statement made by Bank of Bengal twice a year, 543——Consequences of the bank refusing accommodation, 550——There is no objection to perfect freedom in banking at Calcutta, provided charters do not signify recognition by Government, 558——Reasons why paper notes of other banks should not be received on an equality with Government paper, 564.

[Fourth Examination.]—Capital of the Bengal Bank; proportion vested in Government securities, 567-574——Amount for which bank notes are issued, 575——Improvement which might be adopted in the management of Treasury notes, 586——Mode of keeping balances in Bengal, 590——Effect of their balances in specie being locked up, 600——Date at which bills from China are drawn, 602——Evidence concerning interest of money; bank deposits, and payments of debts, 601-617——Balances in different treasuries,

Mackenzie, Holt. (Analysis of his Evidence)—*continued.*

treasuries, 618–626——Losses sustained in 1822–23 by the purchasers of salt and opium, 627——Expenses to individuals of re-coining silver, 632——Expenses of the mint might be reduced, 641——Circulation of copper money, 646——Manner in which remittances of dividends might be made if the Company paid only in India, 648——Dividends demandable in London, 657——Government servants allowed to trade, 662——Largest amount of Territorial revenue advanced at any one time in India for commercial purposes, 682——Bengal Bank discontinued discounts during the Burmese war, in consequence of its reduced cash balance, 688.

(Answers to Queries from the India Board)—Principal causes which have affected the revenue of India since 1808–9, either by improvement or deterioration of old or the introduction of new resources, *App.* p. 428——Causes which have affected the amount of charge in the various departments of Indian administration since 1808–9, *App.* p. 433——Measures suggested for rendering the existing revenues more productive, or for realizing the revenues with more regularity and promptitude, *App.* p. 436——Measures suggested which would be calculated to reduce in whole or in part any head of charge falling upon the Indian revenue, or to introduce more economy into the expenditure, *App.* p. 438——Mode in which money has been borrowed in India by the Government since 1808–9; advantages and disadvantages of course pursued, *App.* p. 441——Number of mints in India in 1809 and at the present time; regulations of existing mints; condition of the various currencies at present and former periods; imports and exports of precious metals, *App.* p. 443——Steps taken for the separation of the Territorial from the Commercial accounts of the Company in India and England; further measures required for that purpose, *App.* p. 446——Losses, &c. since 1808–9; how far the system of accounts is calculated to guard against loss, and compel the bringing to account public money or stores received and expended; suggestions for improvement of the system, *App.* p. 447.

Answers to queries proposed by the Board of Control upon subjects connected with the trade of India: present arrangements with foreign States in regard to trade with India; improvements which may be suggested in those relations, *App.* p. 568——Are there any, and what, benefits derived by the revenues of Great Britain from the present system for conducting the trade with India and China, which would be lost by a change of system, *App* p. 572——Measures suggested calculated to advance the interests of Indian commerce, such as the improvement or increase of the exportable productions of India, *App.* p. 590.

Mackillop, Mr. Answers to queries proposed by the Board of Control upon subjects relating to the trade with India: the trade of the East India Company, and its effects; union of government and trade; means of effecting remittances; division of Territorial and Commercial accounts; foreign trade with India, &c. &c. *App.* p. 506, 516, 518, 520, 531, 541, 567, 572, 576.

Mulberry Trees. Mulberry tree in cultivation in India is called the Indian Variety, *Wilkinson* 2127——Which is ready for picking about four months after they are planted, *Wilkinson* 2132——Two systems of cultivation pursued, the one standard, the other coppice or jungle, *Wilkinson* 2133——At Santipoor crops are gathered March or April, and July or November, *Wilkinson* 2137——Crops in the rains are most abundant, *Wilkinson* 2139——Jungle trees grow to the height of six feet, *Wilkinson* 2143——Manner in which hedge rows are cultivated, *Wilkinson* 2146–2153——Ryots are the producers of the mulberry, *Wilkinson* 2154——Two plants are most extensively applied to feeding silk-worms, mulberry tree and palma christi, *Wallick* 2330——Dwarf or shrubby sort of mulberry considered by natives as infinitely preferable, *Wallick* 2418.
Species cultivated most in France is the Morus Alba, *Bowring* 2580——Sides of the Rhone are the principal silk districts in France, *Bowring* 2581——Cause of preference for the white mulberry, *Bowring* 2583, 2585——Trees are not cut, the leaves for the worms are gathered from the stems, *Bowring* 2587——Some species of the mulberry will grow in any climate, *Bowring* 2588——Morus of China a dwarf, and is principally used in China, and seldom grows above the height of between six and seven feet, *Bowring* 2590——Effect of grafting on trees, as compared with ungrafted trees, *Bowring* 2592——Cultivation of the plant has become a primary consideration in France; capital is now much employed in its production, *Bowring* 2594——Damp soil unfriendly to the white mulberry, *Bowring* 2600——There is no duty on mulberry trees; they are rated through the medium of the land-tax, *Bowring* 2678——Names of the best works on the cultivation of the mulberry tree, and the treatment of silk-worms, *Bowring* 2682.
See also *Silk.*

Munjeet. Statement showing the quantity of munjeet shipped, 1793—1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing the countries to which shipments were made, *App.* p. 880.

Musk. Return showing the quantity sent into the interior of the Presidency of Fort St. George, from Madras, 1823—1831, *App.* p. 921.

Mustard Seed. Return of the quantity sent into the interior of the Presidency of Fort St. George, from Madras, 1823 to 1831, *App.* p. 921.

N.

Nankeens. Company have discontinued importation thereof, *Simons* 975——Private speculations in nankeens have been a losing concern, *Simons* 988——Quantity of nankeens sent into the interior from the port of Madras, 1823—1831, *App.* p. 924——Account of the quantity imported into the United Kingdom in each year, 1793—1831, *App.* p. 768.

Natives. Substitution of Native for European agency would be valuable in effecting reductions in expenditure, *Mackenzie* 71, 81, 87, 152, 153——Advantages of employing natives in the lower judicial departments, *Mackenzie* 83——Use of English fashions and luxuries have increased among natives, *Mackenzie* 90——Cause of the poverty of the people attributable to their want of exertion, *Wallick* 2345.
See also *Hindoos.*

Navigation Laws. Beneficial effects which have resulted from a relaxation of the navigation laws as respects the trade with India, although its effect has been limited, as the trade from the ports of India to the Continent of Europe is different in its character from any thing like a general trade, *Hall* 2523.

New Guinea. See *Guinea,* New.

New South Wales:

Calcutta:
Number of ships and amount of tonnage entered inwards at the port of Calcutta, between 1793 and 1831, from New South Wales, *App.* p. 779——Also which cleared outwards from the port of Calcutta, between 1793 and 1831, to New South Wales, and stating the flag under which they sailed, *App.* p. 795.

Madras:
Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from New South Wales, *App.* p. 806——Also which cleared outwards, between 1793 and 1831, from the port of Fort St. George, and the ports subordinate thereto, to New South Wales, and stating the flag under which they sailed, *App.* p. 818.

Bombay:
Number of ships and amount of tonnage entered inwards, between 1802–3 and 1829–30, at the ports of Bombay and Surat from New South Wales, *App.* p. 829——Also which cleared outwards, between 1802–3 and 1829–30, from the ports of Bombay and Surat, to New South Wales, and stating the flag under which they sailed, *App.* p. 837.

Nicobars. Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from Nicobars, and stating the flag under which they sailed, *App.* p. 813.

Nile. See *Steam.*

Nitrate of Soda. Extract of letter in the Commercial department from the Court of Directors to the Governor-general in Council, May 1832, on nitrate of soda, *App.* p. 662.

O.

Officers of East India Company's Service. Civil servants, excepting the Commercial, are restricted from trading, *Mackenzie* 662——Numbers which are enabled to trade under present regulation, *Mackenzie* 665.
See also *Agency. Commission.*

Oil. Quantity of oil received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 927——Quantity of oils of sorts received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St.George, *App.* p. 930.

Oil Seeds. Quantity of oil seeds received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 927——Quantity of oil seeds received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 930.

Oilman's Stores. Return of the quantity of oilman's stores sent into the interior of the Presidency of Fort St. George, from the port of Madras, 1823—1831, *App.* p. 923.

Okhotsk. Number of ships and amount of tonnage cleared outwards from the port of Calcutta, between 1793 and 1831, to Okhotsk, and stating the flag under which they sailed, *App.* p. 801.

OPIUM:

1. *Generally.*
2. *Consumption.*
3. *Imports.*
4. *Price.*

1. *Generally:*
Manufacture of opium is a matter of revenue, not trade; no change could be made without immense loss to the revenue, *Mackenzie* 215——Monopoly a great evil as far as the commerce of the country is concerned, *Mackenzie* 232——India the best market for opium in the world, *Mackenzie* 254——Opium will always afford the Government means

Opium—continued.
of remittance through China, *Mackenzie* 255, 256——Probability of the opium trade not being confined to Bengal supply, owing to the increase of Malwa opium, *Bracken* 1822——Proposition for levying the duty on opium by an excise in lieu of the mode now pursued, *Bracken* 1833.

2. *Consumption:*
Increase of, in China, attributable to the increased demand of the Chinese, *Mackenzie* 292——Company can only derive permanent revenue from being able to supply cheaper than from other countries, *Mackenzie* 296——Trade in opium between India and China has greatly increased, *Palmer* 1396——Fondness of the Chinese for opium, *Bracken* 1921.

3. *Imports:*
Statement showing the quantity of opium shipped, 1793—1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 881——Quantity of opium received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 927——Quantity of opium received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 930.

4. *Price:*
How paid for in China, *Mackenzie* 290——Fall in the price from the competition of Malwa opium, *Mackenzie* 294, 295——How affected by the alteration of price in 1822–23, *Mackenzie* 627.

Opium Milk. Quantity of opium milk received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 931.

Orontes. Advantage of the passage of the Orontes, but for the interference of Arabs and Turks, *Peacock* 1491.

Oude. Government cannot long continue without interference with such protected States as the King of Oude, *Mackenzie* 67.

P.

Paints. Return showing the quantity of paints sent into the interior of the Presidency of Fort St. George, from the port of Madras, 1823—1831, *App.* p. 921.

Palankeens. Number shipped from Calcutta, 1793—1830, to countries beyond the territories of the three Presidencies, distinguishing each country, *App.* p. 850.

Palma Christi. Much used to feed silk worms in India, *Wallick* 2330.

Palmer, J. Horsley. (Analysis of his Evidence.)—Governor of the Bank, 1281——Financial remittances might be carried on without trading to the present extent by the East India Company, 1282——Three millions and a half sterling might be remitted without the Company trading, 1283——Value of Sycee silver as compared with sicca rupees, 1286–1291, 1298——Bills preferable to a bullion remittance, 1294——Comparative value of Sycee silver and British standard, 1302——Sycee cannot be the Spanish dollar melted down; it must be the mines of Asia, 1308——Quantity of gold which it is worth the refiner's while to extract from silver, 1309——Consequence of the high rate of exchange on Paris on the price of silver, 1314——Importation of silver from India, on account of its producing greater value than bills, will take place, 1318——Dislike of the merchants of India to exportation of bullion; similar feeling with all mercantile classes, 1326——Witness's opinion as to the introduction of gold coin for current circulation in India, 1332——Under what circumstances the Company might get money on their bills on the treasuries in India, 1336——Evidence concerning the means by which the Company might, on abandoning trade, transmit a large fund from India to England, 1345——No effect to be apprehended by the Company from combination of merchants, as exports to India and China must furnish means of remittance, 1348.

Necessity of collateral security on taking bills of merchants' houses in Calcutta, 1350——And of dealing with houses of the first credit, 1356, 1357——Extent of funds realized in China, from produce of India, would afford means of remittance, 1361——And respectable houses would be resident in Canton if the Company abandoned the China trade, 1365——In the event of the Company abandoning trade, there would be no difficulty in their making the necessary remittances, 1367——Consequences of wars in India as to shipments of bullion in return for goods from this country, 1373——Disadvantage to commercial transactions, owing to the Company's trading, as at present, largely in indigo, &c., 1377——Extent of exports from India to China, 1381.

Consequences to India of large exportation of silver, 1387——No country ever did or can permanently export its bullion, 1392——Trade in opium between India and China has greatly increased, 1396——Consequences to India of a continued exportation of bullion, 1405——Impossible for any country to continue to furnish politically any payment of

Palmer, J. Horsley. (Analysis of his Evidence)—*continued.*
of bullion that the produce of the country will not resupply, 1414——Results of the trade between England, India and China, 1423——Fallacious opinions of merchants as to the benefit to be derived from opening the trade of Canton, 1426——Consumption of tea might in this country be carried to any extent, 1429——Great increase in the consumption of coffee since reduction of duty, 1436——Advantages the Company would derive from making several Territorial payments in India instead of this country, 1438——Consequences to India of the amount drawn annually from her by this country, 1441.

Palmer & Co. Effect of the stoppage of their bank on the credit of banks generally, *Mackenzie* 537.

Paper. Return of the quantity sent into the interior from the port of Madras, 1823–1831, *App.* p. 923——Quantity of paper received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 931——Digest of evidence taken before the Select Committees of the House of Commons on East India affairs; Second Report of 1830, and Reports 1830–31 and 1831, on Commercial subjects; relating to Paper, *App.* p. 471.

Payments. See *Territorial Payments.*

Peacock, Thomas Love. (Analysis of his Evidence.)—Office held by witness in India, 1448——Voyage of the Enterprize steam-vessel by the route of the Cape of Good Hope to Calcutta, 1450——Objections to the route from Bombay to the Red Sea and Alexandria, on account of the expense, 1454——Great use of steam-boats in navigating the Red Sea, 1458——Voyages made by the Hugh Lindsay from Bombay; advantage of making Berenice the port in the Red Sea, 1459——Survey of the old canal from Suez to the Nile; estimate of reconstructing, 1460——Level of the Red Sea at high water 30½ feet above the Mediterranean, 1461——One hundred miles is the distance from Suez to Pelusium, 1465——Reasons why the French preferred the direction of Suez and the Nile to the bed of the old canal, 1467——Level of the High Nile as compared with the Red Sea, 1470——Steam-boats could be only used on the Nile from August to March, 1472.

Arrangements which might be made to facilitate communications between India and Europe by the Euphrates, 1475——General state of the navigation of the Euphrates, 1476——Fuel which might be procured, 1481——Boats which navigated the river in the time of Herodotus, 1486——Strength of the stream, 1489——Advantage of the passage of the Orontes, but for the interference of Arabs and Turks, 1491——Present plan of the Russians for an easy mode of access to India, 1494——Who at present have steam navigation on the Wolga, 1496——On the whole the passage by the Euphrates would be the best if it could be rendered safe from the people, 1500——Advantages of a ship canal from Suez counterbalanced by fear of the advantage which would be given to the Mediterranean ports for the purposes of trade, 1503——Expedition with which letters, under a good system of management, might be brought from Bombay to London, 1515, 1521.

Expeditious voyage made from London to Calcutta by the Marquis of Wellington, 1519——Course which would make the voyage to India five weeks, 1522——Route by the Euphrates cheaper than by the Red Sea, 1525——Routes from England to Bombay by land, 1533——Objects for which steam-boats would be specially useful on the Ganges, 1534——Distance by the Hooghley to Allahabad, 1537——Time taken by a steam-boat to perform the voyage, 1537——Nature of boats building by the Company for the river Ganges, 1541——These boats might navigate the river to Ferruckabad, 1547——Expense which the system of steam navigation will cause to the East India Company, 1552——Steam navigation might be applied to the Indus, 1557——Means of obtaining fuel in India, 1568——Cutch coal of no use for steam, 1568——Burdwan coal the best, 1571——Price of at Calcutta, 1572——At Bombay they prefer English coal, and find it cheapest, 1573——Manner in which fuel may be supplied upon the Euphrates, 1581——Expense of taking coal from London to the Red Sea, 1584——Effect of steam navigation in America, 1590——The Indian rivers could not be navigated by night as well as day, on account of the shallows, 1597——Except the Indus, 1598.

Sea steam-boats not of so much importance in India as river boats, 1605——There are private steam-boats as well as Company's vessels in India; principally used for towing vessels, 1610——Great difficulty to extending steam navigation is want of coal, 1613——Regulation as to travelling licenses merely nominal, 1621——Principal articles of trade brought down the Ganges, 1627——The Company have never prevented steam navigation being established, nor could it ever have been if the Company had not done it themselves, 1629.

Pegue:

Calcutta:

Number of ships and amount of tonnage entered inwards at the port of Calcutta, between 1793 and 1831, from Pegue, *App.* p. 783——Also which cleared outwards from the port of Calcutta, between 1793 and 1831, to Pegue, and stating the flag under which they sailed, *App.* p. 799.

Pegue—continued.

Madras:

Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from Pegue, *App.* p. 809 ——Also which cleared outwards, between 1793 and 1831, from the port of Fort St. George, and the ports subordinate thereto, to Pegue, and stating the flag under which they sailed, *App.* p. 821.

Bombay:

Number of ships and amount of tonnage entered inwards, between 1802–3 and 1829–30, at the ports of Bombay and Surat, from Pegue, *App.* p. 831——Also which cleared outwards, between 1802–3 and 1829–30, from the ports of Bombay and Surat, to Pegue, and stating the flag under which they sailed, *App.* p. 838.

Penang and Eastwards:

Calcutta:

Number of ships and amount of tonnage entered inwards at the port of Calcutta, between 1793 and 1831, from Penang and Eastwards, *App.* p. 782——Also which cleared outwards from the port of Calcutta, between 1793 and 1831, to Penang and Eastwards, *App.* p. 798.

Madras:

Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from Penang and Eastwards, *App.* p. 808——Also which cleared outwards, between 1793 and 1831, from the port of Fort St. George, and the ports subordinate thereto, to Penang and Eastwards, and stating the flag under which they sailed, *App.* p. 820.

Bombay:

Number of ships and amount of tonnage entered inwards, between 1802–3 and 1829–30, at the ports of Bombay and Surat, from Penang and Eastwards, *App.* p. 831——Also which cleared outwards, between 1802–3 and 1829–30, from the ports of Bombay and Surat, to Penang and Eastwards, and stating the flag under which they sailed, *App.* p. 838.

Pennington, James. (Analysis of his Evidence).—Has been for some time examining the East India Accounts, 1——Difficulty of arriving at conclusions from those laid before Parliament, 3——Nature of the Statements laid before Parliament by the East India Company, 8——Statement concerning the Register Territorial Debt of India, 14——Principle of division of Territorial and Commercial charges, 20–24——Balance Statement is in the course of preparation at the India House, which it is likely will clear up all doubts and difficulties, 25.

[Second Examination.]—Explanation of the term " Deferred accounts," in the Report handed in by witness, 2097——Difference of exchange between the Board's rates, and the rates at which bills are usually drawn, 2098.

Pennington, Mr. Report on the Financial Accounts of the East India Company, *App.* p. 15.

Pensions. Principle upon which the Company regulates its grants of pensions, *Melvill* 2085——Court of Directors are prohibited from granting a pension to any person exceeding 200*l.* per annum, without the sanction of two general courts summoned for that purpose, and without the approbation of the Board of Commissioners, *Melvill* 2087——Circumstances under which small pensions are granted, *Melvill* 2088.

Pepper. Return showing the quantity of pepper sent into the interior of the Presidency of Bengal from the port of Calcutta, 1793 to 1831, *App.* p. 918——Similar returns of quantities sent from Fort St. George to the provinces of the Madras Presidency, *App.* p. 920——Heavy duty to which it is subjected in this country owing to the present customs regulations, *App.* p. 581——Statement showing the quantity of pepper shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, and distinguishing countries to which shipments were made, *App.* p. 878.

Perfumery. Quantity of perfumery received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 931.

Persia. Communications from Vice-Consul Brant, concerning the possibility of carrying on a large trade in the Northern Provinces of Persia by the Black Sea, *Cabell* 1641.

Persia, Gulf of. Effects upon trade and revenue which have attended the mission adopted by the British Government for the suppression of piracy in the Gulf of Persia and the Indian Ocean, *Cabell* 1661.

See also *Arabian and Persian Gulfs. Coals.*

Petitions. See *Duties,* 3.

Pickles. Return of the quantity of pickles sent into the interior from Madras, 1829 to 1831, *App.* p. 923.

Piece Goods. Statement showing the quantity of piece goods shipped, 1793—1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 883——Quantity of piece goods received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 926——Quantity of piece goods received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 931–2.

See also *Cotton*, 5. *Silk.*

Pilots. List of pilots employed in the Hooghley steam-vessels on voyages to the Upper Provinces, *App.* p. 723.

Piracy. See *Persia*, Gulf of.

Planks. Value of planks received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 927.

Plant. See *Cotton*, 2.

Political Charges. Statement of the amount of political charges incurred in England deemed chargeable on the Territorial revenues of India, 1814–15—1828–29, *App.* p. 170.

Territorial branch in account with the Commercial, in respect to payments of a political nature made from the commercial funds in England, China and the Cape, for the amount of which the Commercial branch has a claim to be repaid by advances for investment in India and China, *App.* p. 282.

Political and Commercial. Statement of the steps which have been taken, by the Commissioners for the Affairs of India, or the Directors of the East India Company, for carrying into effect the separation of the Political and Commercial accounts of the said Company, *App.* p. 1.

Pondicherry and Mahe. Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from Pondicherry and Mahe, *App.* p. 811——Also which cleared outwards, between 1793 and 1831, from the port of Fort St George, and the ports subordinate thereto, to Pondicherry and Mahe, and stating the flag under which they sailed, *App.* p. 823.

Port Glasgow. See *Shipping.*

Portsmouth. See *Shipping.*

Portugal:

Calcutta:

Number of ships and amount of tonnage entered inwards at the port of Calcutta, between 1793 and 1831, from Portugal, *App.* p. 775——Also which cleared outwards from the port of Calcutta, between 1793 and 1831, to Portugal, and stating the flag under which they sailed, *App.* p. 791.

Madras:

Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from Portugal, *App.* p. 804——Also which cleared outwards, between 1793 and 1831, from the port of Fort St. George, and the ports subordinate thereto, to Portugal, and stating the flag under which they sailed, *App.* p. 816.

Bombay:

Number of ships and amount of tonnage entered inwards, between 1802–3 and 1829–30, at the ports of Bombay and Surat, from Portugal, *App.* p. 827——Also which cleared outwards, between 1802–3 and 1829–30, from the ports of Bombay and Surat, to Portugal, and stating the flag under which they sailed, *App.* p. 835.

Post. Memorandum of Mr. Taylor's proposals to Government for the carriage of the public mails to England and back in steam-packets, *App.* p. 734.

Potato. Introduction and growth thereof in India, *Wallick* 2449.

Precious Metals. See *Gold and Silver.*

Price of Opium. See *Opium*, 4.

Prince of Wales Island. Cost of all consignments sent from England to Bencoolen, Prince of Wales Island, and Singapore and Malacca, *App.* p. 171——Extract general letter from the Government of Prince of Wales Island to the Court of Directors, April 1830; trade settlements, *App.* p. 647——Copy minute of R. Fullerton, esq., President of Prince of Wales Island, April 1830: Report on the trade of the three settlements, Prince of Wales Island, Singapore and Malacca, *App.* p. 647——Minute of R. Ibbetson, dated 29th April 1830, *App.* p. 661——Minute of R. Fullerton, April 1830, *App.* p. 662.

See also *Supplies.*

Prinsep, H. T. Note by Mr. Secretary Prinsep on the introduction of steam navigation on rivers in Bengal, 1828, *App.* p. 677——Letter from Captain J. H. Johnston to H. T. Prinsep, secretary to the Bengal Government, Nov. 1828, relative to steam communication with India, and the rivers in India, *App.* p. 698——Letter from Captain E. Smith, engineer, to H. T. Prinsep, *App.* p. 712.

Production of Indigo. See *Indigo*, 4.

Profits. See *Commercial*, 4.

Profit and Loss. Profit and loss upon all goods sold by the East India Company in 1828–29, distinguishing India and China; specifying invoice price and sale amount; showing likewise proceeds of the commerce in Great Britain, converting prime cost of investments, so far as it consists of repayments of advances by the Commercial department, at rates of exchange used in Company's books in transactions between the two branches of their affairs, *Leach*, p. 72.

Statement of the adjustment to be made in the profit and loss accounts, 1829–30, with reference to the outturn of that portion of the Indian investment provided under the arrangement with regard to interest bills, 1814, for keeping the Company's home accounts, *App.* p. 356.

Statement of profit and loss upon Company's goods sold 1814, together with the profits resulting to the Company in England, 1814–15, together with the ultimate surplus liable to the appropriation of 53 Geo. 3, c. 155, *App.* p. 393.

Account of the profit or loss on all goods sold in England by the East India Company in 1814–15, 1816–17, distinguishing India and China; together with all commercial profits accrued in England in the same period; also showing the surplus remaining after providing for payment of the dividends on the capital stock, and interest on home bond debt, *App.* p. 276.

Account of profit and loss on all goods sold by the East India Company 1829–30, distinguishing India and China, and specifying the invoice price and the several charges respectively; also sale amount; showing proceeds of commerce, and converting the prime cost of the investment, so far as it consists of repayments by the Commercial department, at the rate of exchange used in transactions between the two branches of their affairs, *App.* p. 355.

Statement of the adjustment to be made in the profit and loss accounts 1829–30, with reference to the outturn of that portion of the Indian investment which may be deemed to have been provided under the arrangement, with regard to interest laid down in plan of 1814, *App.* p. 356, 407.

Abstract statement of profit and loss upon Company's goods sold in March and September 1816—1820, and other profits resulting to the Company in England 1817; together with the ultimate surplus liable to the appropriation of 53 Geo. 3, *App.* p. 394.

Account of the profit and loss upon all goods sold by the East India Company, 1820–21 to 1829–30, distinguishing India and China, and specifying invoice price, and the several charges respectively; also the sale amount; and net proceeds of the commerce in Great Britain after defraying charges, *App.* p. 396–409.

Surplus commercial profits of the East India Company after payment of the dividends on the capital stock, &c. 1814—1830, together with the amount appropriated; and showing balance unappropriated, prepared according to the opinion of the Company's standing counsel as it respects home bond debt discharged, *App.* p. 406.

Protected States. See *Hydrabad. Oude.*

Provisions. Quantity of provisions received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 930, 931.

Public Buildings:

Calcutta:

Letter from the Court of Directors to the Governor-general in Council at Bengal (Finance department,) dated 31st March 1830, *App.* p. 419——Extract of letter from the Governor-general in Council at Bengal, to the Court of Directors, May 1831, on the subject of public buildings, *App* p. 423——Total expense of new buildings in the years 1825–26, 1826–27, 1827–28, *App.* 423.

Madras:

Letter from the Court of Directors to the Governor in Council at Madras, (Finance department) on the charge for Public departments, *App.* p. 421——Extract from Fort St. George finance consultations, September 1831, on charge for public buildings, *App.* p. 424——Letter from the Military Board at Madras to the Governor in Council at Madras, *App.* p. 424.

Bombay:

Letter from the Court of Directors to the Governor in Council at Bombay (Finance department) on the charge for public buildings, *App.* p. 422——Extract from a letter from the Governor in Council at Bombay to the Court of Directors, November 1830, on the charge for public building, *App.* p. 424.

Purchases. See *Buying and Warehouse Committee.*

Purchase of Indigo. See *Indigo*, 5.

Purnea. See *Survey.*

Pykars. Advances made by Government to pykars for silk, who settle everything with the peasants, *Wilkinson* 2208, 2209, 2211.

Q.

Quicksilver. Return showing the quantity of quicksilver sent into the interior of the Presidency of Bengal from the port of Calcutta, 1793—1831, *App.* p. 918.

Quickstock Accounts. See *Debts and Assets.*

R.

Rail Roads. Considerations relative to the applicability of canals and rail-roads to India, *App.* p. 671——Expense of forming a rail-road; their applicability to Madras, *App.* p. 671——Difficulties that might be expected considering the present state of the arts in that country; what particular lines there are in which such works would be most beneficial in Madras, *App.* p. 671–675.

Rates of Duties. See *Duties.*

Rattans. See *Dyeing Woods.*

Read, C. R. Memorial of Mr. C. R. Read to the Right hon. C. Grant, July 1831, on the export of military stores to Singapore, *App.* p. 662.

Reciprocity Treaty. Evil effects produced by the reciprocity treaty between England and France, *Bowring* 2684——Consequences to the French merchants in their purchases of colonial produce; statement of their shipping, as regards the East India trade, *Bowring* 2686——Bad effects on French trade of the prohibitory system, *Bowring* 2694.

Red Sea. Objections to the route from Bombay to the Red Sea and Alexandria on account of the expense, *Peacock* 1454——Great use of steam-boats in navigating the Red Sea, *Peacock* 1458——Advantages of making Berenice the port in the Red Sea, *Peacock* 1459——Survey of the old canal from Suez to the Nile; estimate of reconstructing it, *Peacock* 1460——Level of the Red Sea at high water 30½ feet above the Mediterranean, *Peacock* 1461——Reasons why the French preferred the direction of Suez and the Nile to the bed of the Old Canal, *Peacock* 1467——Level of the High Nile as compared with the Red Sea, *Peacock* 1470——Expenses at which navigation between Bombay and Suez might be maintained, *Johnston* 1726——British trade with the East Indies would not be materially assisted by a canal uniting the Red Sea with the Mediterranean, *Johnston* 1730.
See also *Steam*, *Suez.*

Reductions. Statement showing the estimated effect, subsequently to 1829–30, of the reductions which have been ordered in the charges of India, and the amount of the further reductions necessary to reduce those charges to the standard of those of 1823–24, *App.* p. 173.

Statement of reduction in Indian allowances and establishments (civil, marine and military) ordered by the Court and the several local governments since 1827–28; distinguishing immediate from prospective; also a statement showing the estimated effects of certain measures of reduction which have been recommended by the Calcutta Civil Finance Committee, *App.* p. 174.

REMITTANCES:

1. *Generally.*
2. *Indigo.*
3. *Papers laid before the Committee.*

1. *Generally:*

Manner of keeping remittance accounts, *Mackenzie* 43——No necessity for the Company to trade for the sake of making remittances, *Mackenzie* 234, 236, 244——Opium will always afford Government means of remittance, *Mackenzie* 255, 256, 288——Extent to which trade and remittances might be affected by changes in the trade between India, China and this country, *Mackenzie* 261——No fear to be entertained of a monopoly of Calcutta merchants to interfere with East India Company's remittances, *Mackenzie* 266——Manner of managing the business of remittance in India, *Mackenzie* 274——Disadvantage to India paying three millions annually to this country, *Mackenzie* 278——Manner in which remittances might be made by bills, *Mackenzie* 279, *Palmer* 1282——Facility of remittance by increasing commercial operations between the countries, and allowing Europeans to hold lands in India, *Mackenzie* 297, 298.

Variations in amounts of Company's remittances, *Mackenzie* 300——How far the question of remittances may be affected by opening the China trade, *Mackenzie* 306——How far the Company might discharge claims in India in lieu of remittance to London, *Remittances*—continued.

1. *Generally*—continued.

Mackenzie 310——Effect of a plan for the purpose of encouraging remittances through the East India Company by private merchants, *Simons* 1046——Financial remittances might be carried on without trading to the present extent by the East India Company, *Palmer* 1282——Three millions and a half might be remitted without the Company trading, *Palmer* 1283——Bills preferable to a bullion remittance, *Palmer* 1294——Evidence concerning the means by which the Company might, by abandoning trade, transmit a large fund from India to England, *Palmer* 1345——No effect to be apprehended by the Company from combination of merchants, as exports to India and China must furnish means of remittance, *Palmer* 1348, *Bracken* 1798, 1800——Extent of funds realized in China from produce in India would afford means of remittance, *Palmer* 1361——Establishment of merchant's houses which would take place in China if the Company discontinued the trade, *Palmer* 1365——How far remittance through China to England can be depended on, *Bracken* 1821.

If the China trade were thrown open, and opium monopoly destroyed, China might become the means of regular remittance, *Bracken* 1827——Number of houses at Calcutta which would afford means to the Company to make remittances by bills, *Bracken* 1869——Company could always oppose combinations by means of remittance in bullion, *Bracken* 1872——Company remitting home from India by taking bills and security on goods would be inoperative to any extent, *Larpent* 1950——Very little trade has been carried on latterly by the East India Company, their only object being remittance, *Larpent* 1977–1982——Difficulties of arranging a plan by which the Company might remit in bills from India; which, however, might be arranged between the government and the mercantile body, *Larpent* 1993–1994.

Manner in which remittances of dividends might be made if the Company paid only in India, *Mackenzie* 648——Remittances ordered and received since 1828–29, in payment of the debt due from Territory to Commerce, *Melvill* 2476.

Mode which witness should recommend to be taken in the event of its being necessary hereafter for the Government in India to remit annually from India to this country an amount varying from two to three millions sterling, *Rothschild* 2488——Taking bills of lading of cargoes as security, would be a good and safe mode of remittance for the country, *Rothschild* 2489——There is every facility for securing the proceeds of cargoes to persons making advances on bills of lading, *Rothschild* 2490——Amount which might be advanced should be 75 per cent. with a further guarantee from the consignee in this country, *Rothschild* 2491——Course to be pursued by Government in the event of remitting large sums in bullion from India, *Rothschild* 2493——Difference between Government making large Continental remittances, and purchasing Indian bills of exchange, is, the state of trade, owing to the Indian commerce being in the hands of very few persons, *Rothschild* 2497, 2498.

2. *Indigo:*

Commencement of large remittances in indigo to this country by the East India Company, *Simons* 1027——Average remittance per sicca rupee made in indigo since 1819, *Simons* 1038——How far bills might be a preferable remittance to indigo, *Simons* 1042——Unnatural stimulus given to the growth of indigo, owing to the remittance trade of the East India Company, *Larpent* 1952.

3. *Papers laid before the Committee:*

Correspondence between the Board of Commissioners for the Affairs of India and the Court of Directors of the East India Company, relative to a charge made against the Territory for loss sustained in effecting remittances from India to meet bills drawn on the Court for the payment of interest on India debt, *App.* p. 354.

Extract from the plan for arranging the Company's home accounts, framed 1814 (relative to the remittances for discharge of bills of exchange for interest of India debt), *App.* p. 358——Digest of evidence taken before the Select Committee of the House of Commons 1832, on Commercial subjects; relative to Remittances, *App.* p. 501.

How far the necessity of the East India Company effecting a large remittance to England, without primary regard to profit, operates detrimentally or advantageously upon commerce, and to what extent. Could similar remittance be conducted through private agency, and with what effect, *Glasgow Cham. Com., App.* p. 534, *Liverpool East India Com., App.* p. 534, *Bracken, App.* p. 534, *Manchester Cham. Com., App.* p. 534, *Larpent, App.* p. 535, *Rickards, App.* 537, *Crawford, App.* p. 538.

Modes and terms on which remittances have been effected between England and India, or India and England, and between the principal places of commerce in India and Asia with each other; to what extent and degree of regularity operations of foreign exchange and remittance are conducted by European or Native merchants as a separate business: as relates to the East India Company, *Lloyd, App.* p. 538, 539; Generally, *Hill, App.* p. 539, *Glasgow Cham. Com. App.* p. 539, *Liverpool E. I. Com., App.* p. 539, *Bracken, App.* p. 540, *Wood, App.* p. 540, *Crawford, App.* p. 540, *Mackillop, App.* p. 541, *Mackenzie, App.* p. 542, *Rickards, App.* p. 542.

Whether, and by what means, the funds required for Territorial purposes in England could be regularly supplied, and the Government effectually secured from loss by bad bills, were the executive authority in India to cease to carry on trade; at what rate such remittances

Remittances—continued.

remittances might be expected to be realized, *Manchester Cham. Com. App.* p. 542, *Glasgow Cham. Com. App.* p. 543, *Liverpool E. I. Com., App.* p. 543, *Hill, App.* p. 543, *Langton, App.* p. 544, *Crawford, App.* p. 547, *Larpent, App.* p. 548, *Hull Com. App.* p. 552, *Rickards, App.* p 553.

See also Bills of Exchange, 2. *Commercial*, 5. *Dollars. Indigo. Opium.*

REVENUE:

1. *Great Britain.*
2. *Expenditure in India.*
3. *Territorial.*

1. *Great Britain:*

Are there any, and what, benefits derived by the revenues of Great Britain from the present system for conducting the trade with India and China, which would be lost by a change of system, *Bracken, App.* p. 569, *Glasgow Cham. Com. App.* p. 569, *Liverpool E. I. Com. App.* p. 569, *Manchester Cham. Com. App.* p. 569, *Lloyd, App.* p. 569, 570, *Langton, App.* p. 570, *Crawford, App.* p. 570, *Hill, App.* p. 571, *Mackenzie, App.* p. 572, *Mackillop, App.* p. 572, *Larpent, App.* p. 572, *Hull Com. App.* p. 573, *Rickards, App.* p. 573.

2. *Expenditure:*

Measures suggested which would be calculated to reduce, in whole or in part, any head of charge falling upon the Indian revenue, or to introduce more economy into the expenditure, *Hill, App.* p. 438, *Mackenzie, App.* p. 438, *Langton, App.* p. 439, *Wood, App.* p. 439.

3. *Territorial:*

Territorial revenues have never been sufficient to meet Territorial charges during witness's residence in India, *Mackenzie* 50——Cause thereof, *Mackenzie* 54——Estimate for 1830–31 of the revenues of India, which affords ground for calculating an increase, *Mackenzie* 71——Probability of the Company possessing sufficient revenue in case of war, *Mackenzie* 303——Measures suggested for rendering the existing revenues more productive, or for realizing the revenues with more regularity and promptitude, *Hill, App.* p. 436, *Mackenzie, App.* p. 436, *Langton, App.* p. 436, *Wood, App.* p. 437——What are the principal causes which have affected the revenues of India since 1808–9, either by the improvement or deterioration of old, or the introduction of new resources, *Hill, App.* p. 428, *Langton, App.* p. 428, *Wood, App.* p. 428, *Mackenzie, App.* p. 428.

See also *Opium.*

Revenue and Charges. Combined result of the revenues and charges of Bengal, Madras and Bombay, exclusive of the subordinates, and of the home charges, *App.* p. 95——Amount of supplies from the Presidencies in India to the subordinates, including St. Helena, *App.* p. 97——Revenues and charges of St. Helena in each year 1814–15 to 1828–29, *App.* p. 170.

Rice. Digest of the evidence given before the Select Committees of the House of Commons on East India Affairs, Second Report 1830, and Reports 1830–1 and 1831, on Commercial subjects, *App.* p. 470.

Richardson, Dr. See *Zunmay Chiefs.*

Rickards, Mr. Answers to queries proposed by the Board of Control upon subjects connected with the trade of India; relating to, trade of the East India Company, and its effects; consequences of the union of government and trade; means of effecting remittances; division of Territorial and Commercial accounts; state of foreign trade with India, *App.* p. 517, 527, 533, 537, 542, 553, 573, 581.

Rivers, in India, could not be navigated by night as well as by day on account of shallows, *Peacock* 1587——Except the Indus, *Peacock* 1598.

See also Euphrates. Indus. Orontes. Saluween. Steam. Tigris.

Roads. Digest of evidence taken before the Select Committee of the House of Lords 1830, on Commercial subjects; relative to Roads, *App.* p. 457——Digest of the evidence taken before the Select Committees of the House of Commons on East India Affairs, Second Report 1830, and Reports 1830–1 and 1831, on Commercial subjects, relating to Roads, *App.* p. 472.

Rope. Statement showing the quantity of jute rope shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 866——Quantity of rope received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 931.

Rothschild, N. M. (Analysis of his Evidence.)—Mode which witness should recommend to be taken in the event of its being necessary hereafter for the government in India to remit annually from India to this country an amount varying from two to three millions sterling, 2488——Taking bills of lading of cargoes as security would be a good and safe mode of remittance for the country, 2489——And through the medium of the public

Rothschild, N. M. (Analysis of his Evidence)—*continued.*
docks there is every facility for securing the proceeds of cargoes to persons making advances on bills of lading, 2490——Amount which might be advanced should be 75 per cent., with a further guarantee from the consignee in this country, 2491——Course to be pursued by government in the event of remitting large sums in bullion from India, 2493——Difference between government making large Continental remittances, and purchasing Indian bills of exchange, is, the state of trade, owing to the Indian commerce being in the hands of very few persons, 2497, 2498.

Routes to India. See *Euphrates. Indies. Orontes. Red Sea. Steam. Suez.*

Rum. Statement showing the quantity of rum shipped, 1793 to 1831, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 841——Petition from certain European and Native inhabitants of Calcutta, to the House of Commons, relative to the duties levied in Great Britain on East India sugar and rum, *App.* p. 608.

Rungpoor. See *Silk.*

Rupee. Sicca rupee and gold mohurs are legal tender in Calcutta; value of gold, *Mackenzie* 317, 335——Time for which sicca rupees have been legal tender in Bengal; different rupees in circulation, *Mackenzie* 325——Value of Madras rupees as compared with Bengal and Bombay, *Mackenzie* 355, 356——There is no restriction to export of coin from India, *Mackenzie* 386——Out of government territories each State has its own rupees, *Mackenzie* 338——Value of which is continually fluctuating, *Mackenzie* 341——Feruckabad rupee has extended in circulation considerably, *Mackenzie* 344.
See also *Currency. Dollars.*

Russia. Number of ships and amount of tonnage entered inwards at the port of Calcutta, between 1793 and 1831, from Russia, *App.* p. 785——Also which cleared outwards from the port of Calcutta, between 1793 and 1831, to Russia, and stating the flag under which they sailed, *App.* p. 801——Present plan of the Russians for an easy mode of access to India, *Peacock* 1494.
See also *Caspian Sea. Tartary.*

S.

Saddlery. Return of the quantity of saddlery sent into the interior from the port of Madras 1823 to 1831, *App.* p. 924.

Sadras. Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from Sadras, *App.* p. 812——Also which cleared outwards, between 1793 and 1831, from the port of Fort St. George, and the ports subordinate thereto, to Sadras, and stating the flag under which they sailed, *App.* p. 824.

Safflower. Statement of the quantity of safflower shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 891——Quantity of safflower received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 926.

Saffron. Return showing the quantity sent into the interior of the Presidency of Fort St. George, from Madras, 1823 to 1831, *App.* p. 921.

Saint Helena. See *Helena,* St. *Revenue and Charges.*

Salammoniac. Statement showing the quantity of salammoniac shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 892——Return of the quantity sent into the interior of the Presidency of Fort St. George, from the port of Madras, 1823 to 1831, *App.* p. 921.

Sale of Private Goods. See *Commission*

Salmon. Return of the quantity of salmon sent into the interior from Madras, 1823 to 1831, *App.* p. 923.

Saloween River. Navigable for steam vessels, *Johnston* 1698.

Salt. Manufacture of salt is a matter of revenue, not trade; no change could be made without immense loss to the revenue, *Mackenzie* 215——Losses sustained by the dealers in salt in 1822–23, *Mackenzie* 627.

Saltpetre. Profits on saltpetre since 1794 to 1814; loss by sales since that period, *Simons* 1112——Nature of the contract with the East India Company and the Government of this country for shipments of saltpetre, *Simons* 1114.
Statement showing the quantity of saltpetre shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 893——Quantity of saltpetre received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 926——Quantity of saltpetre received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 931.
See also *Docks.*

Sapan Wood. Quantity of sapan wood received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 926.

Sauces. Return of the quantity of sauces sent into the interior from the port of Madras, 1823 to 1831, *App.* p. 923.

Saul and Sissoo Timber. Value of saul and sissoo timber received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 927.

Sautipoor. See *Silk*, 13.

Scind. Resources of Scind for commerce; articles in which that country carries on trade, *Cabell* 1644.

Seeds. Statement showing the quantity of seeds shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 896——Quantity of seeds of sorts received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal. *App.* p. 926.

Seed Lac. Statement showing the quantity of seed lac shipped 1793—1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 877.

Seignorage. See *Coinage.*

Serampore. See *Tranquebar.*

Settlements. See *Indigo*, 6.

Settlement of Land. See *Land*, 3.

Shahabad. See *Survey.*

Shawls. Statement showing the quantity of shawls shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 898——Quantity of shawls received, in each year from 1813 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 926.

Shawl and Beyanjee Wool. Quantity of shawl and Beyanjee wool received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 926.

Shell Lac. Statement showing the quantity of shell lac shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 877.

SHIPPING:

1. *United Kingdom.*
2. *India generally.*
3. *Bombay.*
4. *Calcutta.*
5. *Madras.*
6. *Native Indian.*
7. *New South Wales.*

1. *United Kingdom:*

Return of the number of vessels and amount of tonnage annually entered inwards at the following ports: London, Bristol, Liverpool, Hull, Portsmouth, Cowes, Chichester, Greenock, Glasgow, Leith, Port Glasgow, Belfast, from places east of the Cape of Good Hope, *App.* p. 769——Number of ships and amount of tonnage annually entered inwards in the United Kingdom, from ports in China, commencing 1793–4 to 1831–32, *App.* p. 770.

2. *India generally:*

Return of the number of ships and the amount of tonnage entered inwards and cleared outwards, from 1793 to 1831, from and to countries beyond the territories of the three Presidencies, distinguishing the number of vessels and amount of tonnage at the ports of each Presidency, the countries from whence the vessels came and for which they cleared, and stating the flag under which they sailed, *App.* p. 771.

3. *Bombay:*

A return of the number of ships and the amount of tonnage which have entered inwards, between the years 1793 and 1831, at the ports of Bombay and Surat, from countries beyond the territories of the three Presidencies, distinguishing the countries from whence the vessels came, and stating the flag under which they sailed, *App.* p. 826–833——A return of the number of ships and the amount of tonnage which have cleared outwards, between the years 1793 and 1831, from the ports of Bombay and Surat, to countries beyond the territories of the three Presidencies, distinguishing the countries for which the vessels cleared out, and stating the flag under which they sailed, *App.* p. 834–839.

4. *Calcutta:*

Numbers of ships and quantity of tonnage which entered inwards at Calcutta, distinguishing British, French, American, and the rest of Europe, for the years 1827–28 and 1828–29, *Larpent*, *App.* p. 566——A return of the number of ships and the amount of tonnage which have entered inwards, between the years 1793 and 1831, at the port of

Shipping—continued.

4. *Calcutta*—continued.

Calcutta, from countries beyond the territories of the three Presidencies, distinguishing the countries from whence the vessels came, and stating the flag under which they sailed, *App.* p. 772–787——A return of the number of ships and the amount of tonnage which have cleared outwards, between the years 1793 and 1831, from the port of Calcutta, to countries beyond the territories of the three Presidencies, distinguishing the countries for which the vessels cleared out, and stating the flag under which they sailed, *App.* p. 788–801.

5. *Madras:*

Statement of the ships and tonnage arrived at and departed from the Madras territories, and Persian and Arabian Gulfs, 1821 to 1828, *App.* p. 634, 635——Statement of the ships and tonnage, distinguishing English and Arabian, which arrived at and departed from Bombay 1821 to 1828, *App.* p. 637——A return of the number of ships and the amount of tonnage which have entered inwards, between the years 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from countries beyond the territories of the three Presidencies, distinguishing the countries from whence the vessels came, and stating the flag under which they sailed, *App.* p. 802–813——A return of the number of ships and the amount of tonnage which have cleared outwards, between the years 1793 and 1831, from the port of Fort St. George, and the ports subordinate thereto, to countries beyond the territories of the three Presidencies, distinguishing the countries for which the vessels cleared out, and stating the flag under which they sailed, *App.* p. 814–825.

6. *Native Indian:*

Description of a Doondee native vessel used in navigating the Indus, *Cabell* 1645——Description of a zohrug, *Cabell* 1645.

7. *New South Wales:*

Number of vessels and amount of tonnage entered inwards from New South Wales and Van Diemen's Land in each year 1817 to 1831, *App.* p. 770.

Shoes. Quantity of shoes received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 931.

Siam. Gold-dust, tin, and copper have been imported to Calcutta from Siam, *Bracken* 1907.

SILK:

1. *Accounts.*
2. *Advances.*
3. *Agents.*
4. *Cocoons.*
5. *Cultivation.*
6. *Duties.*
7. *European.*
8. *Filatures.*
9. *Imports.*
10. *Piece Goods.*
11. *Purchase in France.*
12. *Raw Silk.*
13. *Reeling.*
14. *Digest of Evidence before Lords and Commons.*

1. *Accounts:*

Inaccuracies in the silk accounts laid before the House of Commons, *Larpent* 1966.

2. *Advances:*

Advances made by the government to pykars, who settle everything with the peasants, *Wilkinson* 2208, 2209, 2211——System by which the advances of the Company are repaid, *Wilkinson* 2222——When wound the silk is placed in store till sent down to be shipped, *Wilkinson* 2233——Rent of land for the production of silk much higher than other land, *Wilkinson* 2318–2321.

3. *Agents:*

Persons appointed silk agents; manner in which they are paid for services, *Simons* 1186——Formerly paid by commission, now by salary, *Simons* 1192——Control exercised over them by the Board of Trade, *Simons* 1195——Highest emolument ever received in one year by a commercial resident, *Simons* 1207——Accounts of commercial officers in India are examined by the Board of Trade at Calcutta, and not by any office in this country, *Simons* 1220, 1221, 1229——Magnificence of the establishment of silk agents; filatures more expensive than private merchants would take, *Bracken* 1833——In no degree superintend the actual production of the cocoons, *Wilkinson* 2212–2214——Necessity for the agents of the Company to be well appointed, *Wilkinson* 2246–2248——Interest taken by Mr. Marjoribanks in the cultivation of the silk trade, *Wilkinson* 2276——His attempts to introduce a Neez cultivation, *Wilkinson* 2276–2278.

4. *Cocoons:*

Cocoons in India not all of the same kind; it depends very much upon the season in which they are spun, *Wilkinson* 2125——Difference of silk is produced from the different season when the cocoon is spun, *Wilkinson* 2169——Periods after hatching at which worms finish their cocoons vary, *Wilkinson* 2175——Destruction of competition between private traders and the Company, owing to the price given by the Company to the rearers of cocoons, *Wilkinson* 2190, 2191——Considerable improvement might be effected

Silk—continued.

effected in the cocoons in India, *Wilkinson* 2201——Quantity of silk produced is greater during the rainy season, but the quality is inferior, *Wilkinson* 2291, 2292——Proportion of silk that a given quantity of cocoons will produce, *Wilkinson* 2293——Indian silk, as compared with the silk of other countries, is foul and uneven, *Wilkinson* 2298——Bengal cocoons are capable of great improvement, and the silk might be materially improved by winding with greater care and attention, *Wilkinson* 2325——Difference between France and Italy in the production of silk from cocoons, *Bowring* 2638–2641——Cocoons are produced in France in six or seven weeks, *Bowring* 2675.

5. *Cultivation:*

Cultivation of silk by Mr. Graham at Ahmednuggur; probability of wealthy natives following his example, *Malcolm, App.* p. 669——Cultivation by Mr. Owen, surgeon, at Seroor, *Malcolm, App.* p. 669——At the gaol of Poonah and Dharwar, where several natives have established manufactories on a small scale, *Malcolm, App.* p. 669.

Memorial of Mr. W. Felkin, addressed to the Right Honourable Lord Auckland, President of the Board of Trade, Dec. 1831, *App.* p. 611——Letter from Mr. W. Felkin to the Right Honourable C. Grant, President of the Board of Commissioners for the Affairs of India, on the growth of silk, *App.* p. 614.

6. *Duties:*

Petition of natives of Bengal to the Right Honourable the Lords of His Majesty's Privy Council and Trade, relative to duties on cotton and silk, *App.* p. 573.

7. *Europeans:*

Remarks on the production of European raw silk, *Felkin, App.* p. 615——Quantity of silk produced in a given number of trees, Mountainous France, Piedmont, Nice, Milanese, Tuscany, Neapolitan, *App.* p. 616——Increase in the production of silk in France from 1789, 1820, 1825, *App.* p. 617——Observations on the product of a recolt, at Alais, Departement de Cevennes, France, 1825, *App.* p. 619.

8. *Filatures:*

Value of the Company's filatures, *Simons* 1093——Failure of attempts to introduce filatures by private speculations from this country, *Simons* 1097——How far the Company ceasing to maintain silk filatures in India would affect the means of remittance, *Simons* 1104——If the Company gave up the silk trade and their factories, individuals might be found to take them, *Larpent* 1968——Silk establishments in India generally on a good economical footing, *Wilkinson* 2235——Expenses in India double as compared with this country, *Wilkinson* 2244——Nature of the work in factories, *Wilkinson* 2260—2263——There are twelve residencies where silk is got up, *Wilkinson* 2267.

9. *Imports:*

Account of the quantity of silk imported into the United Kingdom in each year 1793 to 1831, *App.* p. 768——Statement showing the quantity of silk shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 902——Quantity of silk (raw) received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 931——Quantity of silk received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 926.

10. *Piece Goods:*

Statement showing the quantity of silk piece goods shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing the countries to which shipments were made, *App.* p. 887——Statement of the quantity of pieces of embroidered silk goods shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 890——Quantity or value of articles of foreign production or manufacture sent into the interior of Fort St. George, from Madras, 1823 to 1831, *App.* p. 924——Quantity of piece goods received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 926——Quantity of piece goods received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 930.

11. *Purchase of, in France:*

Peculiar method of regulating purchases of silk in France, *Bowring* 2669, 2670.

12. *Raw:*

Company has discontinued importation of raw silk, *Simons* 975——Company's investments of silk are provided from their commercial funds, *Simons* 1056——Commercial establishments in connection with silk are maintained for the purpose of enabling the Company to remit the Territorial revenue to England, *Simons* 1059——Sum total of silk invoices bears every kind of charge that attaches to silk except interest, *Simons* 1064——Though a loss may appear in some years on remittances of raw silk, it has been on an average a good investment, *Simons* 1080——Cost of Company's investment of raw silk in Calcutta, 1814 to 1831, *Simons* 1083——Manner in which Company's Bengal raw silk is provided, *Simons* 1227.

Silk—continued.

12. *Raw*—continued.

The Company's silk is better than that imported by individuals, *Bracken* 1890——Company's silk better in quality than other silk, *Larpent* 1969——Causes which induce the Company to give higher prices for raw silk, *Wilkinson* 2194——Causes of the inferiority of Indian silk, *Wilkinson* 2198——Destruction of competition between private traders and the Company, owing to the price given by the Company to the growers of cocoons, *Wilkinson* 2190, 2191——Greater progress which has taken place in the improvement of the raw material of silk in France than in any country, *Bowring* 2574——Obtains in France, in several districts, higher prices than silk of Italian growth, *Bowring* 2574——Amount of silk produced in France about 3,000,000 lbs., *Bowring* 2657——Average selling price about 17*s*. per lb., *Bowring* 2658——France produces about three fourths of her consumption, *Bowring* 2659——Raw silk of India has not succeeded in France, *Bowring* 2660.

Account of all sums written off as losses, and all outstanding balances in the books of the several commercial agents, from 1809-10 to 1828-29, on account of the Company's investment of raw silk, *App.* p. 527.

A return of all raw silk now in the East India Company's warehouse unsold, stating the several kinds, and the duties of importation; also the dates at which they have been offered for sale, the taxed price at each sale, and the price at which last offered, together with the invoice price of each kind at the time of importation, *App.* p. 610.

13. *Reeling:*

Introduction into India of Mr. Heathcoat's plan for an improvement in silk reeling, *Wilkinson* 2102——Partial success of the scheme after trial at Sautipoor, *Wilkinson* 2107——The plan was for insuring a more even thread by dividing the cocoons into sets, *Wilkinson* 2110-2112——Plan was introduced into Italy 1824, *Wilkinson* 2113——Directors declined using the invention; Government were willing the experiment should be tried, *Wilkinson* 2114-2116——Experiments in India at Sautipoor and Rungpoor, *Wilkinson* 2117-2119——Process used by the natives in reeling is similar to that used in the Company's filatures, but inferior, *Wilkinson* 2183——Process used in the filatures of reeling, *Wilkinson* 2184——Comparative labour between a native of India and a European reeling silk, *Wilkinson* 2204, 2205——Improvements which might be made in the Indian method of cleaning their silk on the reel, *Wilkinson* 2311, 2312.

Backward state of reeling in France, *Bowring* 2671——Value of the application of capital to that branch of the silk manufacture, *Bowring* 2673.

14. *Digest of Evidence before Lords and Commons:*

* Digest of evidence taken before the Select Committee of the House of Peers 1830, on Commercial subjects; relative to Silk, *App.* p. 455——Digest of evidence given before the Select Committees of the House of Commons on East India Affairs, Second Report 1830, and Reports 1830-31 and 1831, on Commercial affairs; relative to Silk, *App.* p. 466——Of 1832, *App.* p. 483, 486.

SILK-WORMS:

1. *India.*
2. *France.*

1. *India:*

Ryots are the keepers of silk-worms, *Wilkinson* 2155——Leaves for feeding worms are chopped up small, *Wilkinson* 2160——Country worm hatches four times a year, large annual only once, *Wilkinson* 2166——Silk from both worms alike, *Wilkinson* 2170——Difference of silk is produced from the difference of season when the cocoon is spun, *Wilkinson* 2169——Periods after hatching at which worms finish their cocoons vary, *Wilkinson* 2175——Worms are kept in a dark place during the process of feeding, *Wilkinson* 2180——Are generally fed and bred in huts, *Wilkinson* 2202——Country worms are better than annuals, *Wilkinson* 2285——A biggah of plants will feed about a thousand worms a day, *Wilkinson* 2289——Improvements which might be made in the management of the growth of silk in India, *Wilkinson* 2310——Two plants are most extensively applied to feeding silk worms, mulberry trees and palma christi, *Wallick* 2330.

2. *France:*

Improvement in France of silk owing to the introduction of a new worm from China, *Bowring* 2576——Care required in preparing leaves for the food of the worm, *Bowring* 2597, 2598——In Europe there are only two distinct species of worms, *Bowring* 2603——Different sorts of worms in Europe and China, *Bowring* 2604, 2613——Degree of heat used for hatching the eggs in France, *Bowring* 2624——Average produce of an ounce of eggs; length of the life of silk-worms, *Bowring* 2624, 2625——Consumption of leaves by worms at different periods of their growth, *Bowring* 2630-2635——Mode of destroying the chrysalis, *Bowring* 2680——Table of the progress of the worms hatched from an ounce of eggs, from birth to time of spinning, *Bowring* 2683.

Silver. Comparative value of sycee and British standard, *Palmer* 1302——Quantity of gold which it is worth the refiner's while to extract from silver, *Palmer* 1309——Importation of silver from India, on account of its producing greater value than bills, will take place, *Palmer*

Silver—continued.

Palmer 1318——Dislike of merchants to exportation of bullion, *Palmer* 1326——Consequences to India of large exportation of silver, *Palmer* 1387——Consequences to India of the amount drawn annually from her by this country, *Palmer* 1441.

Simons, William. (Analysis of his Evidence.)—Duties of the Committee of Buying and Warehouses, 840——Manner in which purchases are made by the East India Company, 842——Return of the Indian Commercial establishment as new modelled by the Governor-general 1829, 849——Expense of the establishment and office to which witness belongs, 857——Number of persons employed, and amount of salaries in the Warehouse department, 861——The Company have exported no goods to India for sale since 1824–25, 866——Value of the East India house and warehouses, 872——Grounds on which the East India Company discontinued the export of merchandize to India since 1824–25, 873——Copper and woollens were the principal articles of East India Company's export trade, 875——India is supplied as well since the Company traded as before, 879——Statement of the value of imports into Bengal, Madras and Bombay, from Great Britain, 1811–12 to 1828–29, distinguishing merchandize from treasure (including the East India Company's imports,) 881——Ruinous nature of the Company's wine trade, 883——Reasons which induce the Company still to continue their export trade to China, 887——Since 1826–27, the Company have only exported for military and territorial purposes, 891——Lowness of price of woollen goods compared with 1809, 895——Causes of the fluctuation of the China trade, 897.

[Second Examination.]—Broad-cloths formerly dyed for the East India Company in London; practice now discontinued, 912——Long-ells are still dyed in London, 917——Colours of which long ells are dyed, 919——Former manner of contracting for dyeing, 922——Principle on which China cargoes are made up by the East India Company, 941——Formerly the Company agreed to take a certain portion of tin of the Cornish agents; this contract ceased 1793, 944——Profit and loss of the Company on this article, 949——Accounts of the quantity exported of cotton-twist by the East India Company, 954——Method of arranging sales with the Hong merchants, 955——Disturbance in China on account of the importation of cotton-twist, 954——Former losses on the export trade of the Company, 969——Has been much more profitable since 1820–21——Company have discontinued importation of raw silk and nankeens, 975.

Private speculations in nankeens have been decidedly a losing concern, 988——The Company's exports to China have increased in quantity and diminished in cost, 995——Tea is now the only article the Company import from China, 999——Manner in which the sugar purchases are made by the Company, 1002——Manner in which Company's purchases of indigo are made, 1024——Commencement of large remittances in indigo to this country by the Company, 1027——Nature of Company's purchases as compared with private contracts, 1029——Average remittance per sicca rupee made in indigo since 1819, 1038——How far bills might be a more preferable mode of remittance than indigo, 1042——Effect of a plan for the purpose of encouraging remittances through the East India Company by private merchants, 1046——Manner in which interest ought to be charged on borrowed capital for trading purposes, 1049——Company's investments of silks are provided from their commercial funds, 1056——Commercial establishments connected with silk are maintained for the purpose of enabling the Company to remit the Territorial revenue to England, 1059——Sum total of silk invoices bears every kind of charge that attaches to silk except interest, 1064——Principle on which the column headed "Wear and Tear" is made up, 1065——Though a loss may appear in some years on remittances of raw silk, it has been on an average a good investment, 1080.

Cost of the Company's investment of raw silk in Calcutta, 1814 to 1831, 1083——Value of the Company's filatures, 1093——Improvements introduced into India for the manufacture of silk, 1095——Failure of attempts to introduce filatures by private speculators from this country, 1097——How far the Company's ceasing to maintain silk filatures in India would affect their means of remittance, 1104——Profit on saltpetre since 1794 to 1814; loss by sales since that period, 1112——Nature of the contract with the East India Company and the Government of this country, for shipments of saltpetre, 1114——Large quantity of cotton annually shipped from Bombay and Bengal by the Company to China, 1121——Woollens could never be provided in a better way than they now are for the army, 1132——Profits of the Company on their export trade; reasons why they ceased to export, 1137–1151——Difference between the management of East India Company's and docks in general, 1166——Commissions charged by East India Company on sale of goods, 1167——Lower than private merchants, 1169——Dates at which present rates were established, 1170——Sale of private goods entirely governed by the wishes and convenience of proprietors and consignees, 1171.

[Third Examination.]—Cause of increase in Commercial establishment at Bengal, on comparing 1816–17 with 1826–27, 1173——Evidence concerning duties of officers of the East India Company at home and in India, 1174——Persons appointed silk and cotton agents; manner in which they are paid for services, 1186——Formerly paid by commission, now by salary, 1192——Control exercised over them by the Board of Trade, 1195——Highest emolument ever received in one year by a commercial resident, 1207——Accounts of commercial officers in India are examined by the Board of Trade at Calcutta,

Simons, William (Analysis of his Evidence)—*continued.*
and not by any office in this country, 1220, 1221——Manner in which Company's Bengal raw silk is provided, 1227——Correspondence between Board of Trade and the Commercial agents is recorded on the proceedings of the Board of Trade, 1229——Dyeing long-ells might be done cheaper by contracting with one or two large houses, instead of dividing it into six and thirty different portions, 1236——Manner in which circulars are distributed for contracts for dyeing long-ells in London, 1246——General loss on the trade of long-ells, but great profit in the seasons 1829–30, 1830–31, owing to the great fall in the price of wool, 1254——Advantage possessed by Americans in their sale of camlets arises from the smuggling trade, 1266——Profit and loss on cotton-twist exported to China by the East India Company, 1274——Company still import bandannas, 1275——Quantity brought by private trade considerably exceeds Company's investment, 1280.

Singapore. Cost of all consignments sent from England to Bencoolen, Prince of Wales Island, and Singapore and Malacca, *App.* p. 171.
Copy Minute of R. Fullerton, esq., President of Prince of Wales Island, April 1830; Report on the trade of the three Settlements, Prince of Wales Island, Singapore and Malacca, *App.* p. 647.
Memorial of Mr. C. R. Read, to the Right Hon. C. Grant, July 1831, on the subject of the export of military stores, *App.* p. 662——Correspondence on the subject between P. Auber and T. H. Villiers, *App.* p. 663, 664——Letter from W. Carter to T. H. Villiers, on the subject of military stores, Sept. 1831, *App.* p. 665.

Skins and Hides. Value of skins and hides received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 227——Quantity of hides and skins received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 929.

Smith, Capt. Letter from Capt. Smith, engineer, to H. T. Prinsep, on steam navigation, *App.* p. 712.

Smuggling. Smuggling on the coast of China should not be permitted, *Larpent* 2004——Trusting for supply of tea to smuggling would be a very short-sighted policy, *Larpent* 2013.

Snuff. Quantity of snuff received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 931.

Spain. Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from Spain, and stating the flag under which they sailed, *App.* p. 803——Also which cleared outwards, between 1793 and 1831, from the port of Fort St. George, and the ports subordinate thereto, to Spain, and stating the flag under which they sailed, *App.* p. 815.

Soap. Statement showing the quantity of soap shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 904——Quantity of soap received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 926——Quantity of soap received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 931.

Soda. Extract of letter in the Commercial department from the Court of Directors to the Governor-general in Council, May 1832, on nitrate of soda, *App.* p. 662——Quantity of soda received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 931.

Soil. Superficial nature of the soil in India; generally not more than six inches deep, *Wallick* 2332——Nature of the soil in Bengal, *Wallick* 2334——India generally inferior to no part of the world in fertility of soil and richness of produce, *Wallick* 2335, 2337——Soil of India equal to the Isle of France, with regard to sugar, coffee and cotton, *Wallick* 2336.

Spelter. Return showing the quantity of spelter sent into the interior of the Presidency of Bengal from the port of Calcutta, 1793 to 1831, *App.* p. 918.

Spices. Might be produced in quantities in India, only to be limited by the demand, *Wallick* 2440——Return showing the quantity of spices sent into the interior of the Presidency of Bengal, from the port of Calcutta, 1793 to 1831, *App.* p. 918——Similar returns of the quantity sent from Fort St. George into the provinces of the Madras Presidency, *App.* p. 920–922——Quantity of spices received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 932.

Stationery. Return of the quantity of stationery sent into the interior from the port of Madras, 1823 to 1831, *App.* p. 924.

STEAM:

1. *Generally.*
2. *Bengal.*
3. *Bombay.*
4. *Indus.*
5. *Nile.*
6. *Persian Gulf.*
7. *Digest of Evidence before Lords and Commons.*

1. *Generally:*

Great use of steam-boats in navigating the Red Sea, *Peacock* 1456——Steam-boats could only be used on the Nile from August to March, *Peacock* 1472——Steam navigation of the Russians on the Wolga, *Peacock* 1496——Objects for which steam-boats would be specially useful on the Ganges, *Peacock* 1534——Distance by the Hooghley to Allahabad, *Peacock* 1537——Time taken by a steam-boat to perform the voyage, *Peacock* 1537——Nature of boats building by the Company for the river Ganges, *Peacock* 1541——These boats might navigate the river to Feruckabad, *Peacock* 1547——Expense which a system of steam navigation could cause to the East India Company, *Peacock* 1552——Steam navigation might be applied to the Indus, *Peacock* 1537——Sea steam-boats not of so much importance in India as river boats, *Peacock* 1605——Private steam as well as Company's vessels used for towing vessels, *Peacock* 1610——Company have never prevented establisment of steam navigation; nor could it ever have been effected without the Company themselves, *Peacock* 1629.

Description of boats necessary for the navigation of the Indus, *Cabell* 1645——Steam-vessels peculiarly applicable for Government purposes in India, *Johnston* 1707——Expenses of steam vessels generally in India; reductions which might be effected therein, *Johnston* 1714——Regulations necessary to facilitate steam voyages from England to India, *Johnston* 1716——Under proper regulations the voyage might be performed in 80 days, *Johnston* 1718——Plans for adapting steam-engines for towing merchant vessels, *Johnston* 1721——In India might answer as a mercantile speculation, *Johnston* 1728——Purposes to which it might be adapted, *Johnston* 1729——Advantages of steam navigation in the interior of India, *Johnston* 1737——Amount of government demand for internal water-carriage, *Johnston* 1747——Comparative advantages of steam-boats, and the present system of native craft on the rivers, *Johnston* 1750——System of navigating European rivers by steam, *Johnston* 1753——Four steamers in India which do not pay their expenses, owing to expense of repairs, *Johnston* 1757-1759.

2. *Bengal:*

Communications and correspondence relative to the introduction of steam navigation India, and of effecting more rapid intercourse with India by that means, *App.* p. 675——Extracts Report of Committee appointed by Government for the purpose of discussing, in all its bearings, the proposed establishment by Government of a sufficient number of steam-tugs to ensure the more speedy and safe navigation of the River Hooghley, *App.* p. 686.

3. *Bombay:*

Correspondence and communications relative to the intercourse with India by steam; and on the rivers of India, *App.* p. 675.

4. *Indus:*

There are few rivers where steam might be used with better effect than the Indus, *Cabell* 1648.

5. *Nile:*

Steam-boats could only be used on the Nile from August to March, *Peacock* 1472.

6. *Persian Gulf:*

Remarks of Mr. Bowpter on the Persian Gulf and Red Sea, as applicable to steam navigation, for the purpose of opening a speedy communication with England and her territories in the East *viâ* the Mediterranean, 1830, *App.* p. 737.

7. *Digest of Evidence before Lords and Commons:*

Digest of evidence taken before the Select Committees of the House of Commons on East India Affairs, Second Report 1830, and Reports of 1830-31 and 1831, on Commercial subjects; relating to Steam-engines, *App.* p. 472——Of the evidence 1832, *App.* p. 404.

Steam Vessels:

1. *Enteprize.*
2. *Hugh Lindsay.*

1. *Enterprize:*

Voyage of the Enterprize steam vessel by the route of the Cape of Good Hope to Calcutta, *Peacock* 1450, *Johnston* 1668——Nature of employment of the vessel on arriving in India, *Johnston* 1689, 1699——Expense of navigating the Enterprize steam vessel about 3,000 rupees per month, exclusive of fuel, *Johnston* 1788.

2. *Hugh Lindsay:*

Voyages made by the Hugh Lindsay from Bombay, *Peacock* 1459——Navigation of the Hugh Lindsay, *Johnston* 1729.

Steel. Return showing the quantity of steel sent into the interior of the Presidency of Bengal from the Port of Calcutta, from 1793 to 1831, *App.* p. 918.

Stick Lac. Statement showing the quantity of stick lac shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 877——Quantity of stick lac received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 931.

Stock. Stock per computation of the East India Company on 1st May 1829, both in India and England; the Indian stock accounts calculated at 2 *s.* the current rupee, 2 *s.* 3 *d.* the Bombay rupee, 2 *s.* 3¾ *d.* the Madras rupee, and 6 *s.* 8 *d.* for the China tale (exclusive of the Company's capital stock), *App.* p. 222——Statement of the amount standing on the general registers of this Presidency on 30th April 1830, in the names of Europeans and natives, *App.* p. 214.

Stock per computation of the East India Company (exclusive of their capital stock) 1814, both in India and in England; the Indian stock accounts calculated at the rates of 2 *s.* for the current rupee, 2 *s.* 3 *d.* the Bombay, 8 *s.* the pagoda, and 6 *s.* 8 *d.* for the China tale, *App.* p. 213——Stock per computation as above for 1829, *App.* p. 222.

See also *Quick Stock.*

Stone. Digest of evidence taken before the Select Committee of the House of Commons on East India Affairs, Second Report 1830, and Reports 1830–31 and 1831, on Commercial subjects; relative to Stone, *App.* p. 471.

STORES:

1. *Generally.*
2. *Civil and Marine.*
3. *Military.*
4. *Territorial.*

1. *Generally:*

For the supply of stores the Indian government had better have recourse to the English than trust to the local market of India, *Mackenzie* 240——Average amount of stores from England for the Company, *Mackenzie* 242——Terms on which the Indian government might be supplied with stores in India by contract, *Larpent* 1962–1965.

2. *Civil and Marine:*

Account of the exports by the East India Company, for each year from 1814, of the civil and marine stores to India and St. Helena, stores to the Cape of Good Hope, and Factory stores to China, *App.* p. 767.

3. *Military:*

Account of the exports by the East India Company, for each year from 1814, of the military stores to India and St. Helena, *App.* p. 767.

4. *Territorial:*

Amount of territorial stores exported from China and the Cape to India, 1814–15 to 1828–29, *App.* p. 171.

See also *Territorial Stores.*

Suez. Survey of the old canal from Suez to the Nile; estimate of reconstructing the same, *Peacock* 1460——Distance from Suez to Pelusium, *Peacock* 1465——Reasons why the French preferred the direction of Suez and the Nile to the bed of the Old Canal, *Peacock* 1467——Advantages of a ship canal from Suez counterbalanced by the fear of the advantage which would be given to the Mediterranean ports for the purposes of trade, *Peacock* 1503.

SUGAR:

1. *Duty.*
2. *Imports.*
3. *Manufacture.*
4. *Mills.*
5. *Purchase.*
6. *Digest of Evidence before Lords and Commons.*

1. *Duty:*

Heavy duty to which sugar, being growth of the East Indies, is subjected in this country, owing to the existing customs laws, *App.* p. 581——Petition from certain European and Native inhabitants of Calcutta to the House of Commons, relative to the duties levied in Great Britain on East India sugar and rum, *App.* p. 608.

2. *Imports:*

Statement showing the quantity of sugar shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 905——Return of the quantity sent into the interior of the Presidency of Fort St. George, from the port of Madras, 1823 to 1831, *App.* p 922——Quantity of sugar received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 926——Quantity of sugar received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 932.

3. *Manufactures:*

Sugar—continued.

3. *Manufacture:*

Manufacture of sugar might be extended by proper culture, *Mackenzie* 91——Rude nature of the manufacture of sugar in India, *Wallick* 2390.

4. *Mills:*

Erection of a sugar mill at Bassem, to which Government has given every support, *Malcolm, App.* p. 669.

5. *Purchases:*

Manner in which sugar purchases are made by the East India Company, *Simons* 1002 ——Return of the purchases and sales of sugar of every kind by the East India Company, stating the place where purchased, the average price of each sort or quality, and the quantities of each, stating the amount of advances at each place, and the balances remaining due from the natives, in each of the five last years, *App.* p. 622.

6. *Digest of Evidence before Lords and Commons:*

Digest of evidence given before the Select Committee of the House of Lords, 1830, on Commercial subjects; relative to Sugar, *App.* p. 456——Digest of evidence given before the Select Committees of the House of Commons on East India Affairs, Second Report of 1830, and Reports of 1830-31 and 1831, on Commercial subjects; relative to Sugar, *App.* p. 469——Of the evidence 1832, *App.* p. 493.

See also *Docks.*

Sugar-candy. Statement showing the quantity of sugar-candy shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 909——Quantity of sugar-candy received, in each year from 1812-13 to 1829-30, at the port of Calcutta, from Bengal, *App.* p. 927.

Sullivan, Mr. Answers to queries proposed by the Board of Control, upon subjects relating to the trade with India: relating to, trade of the East India Company, and its effects; consequences of the union of government and trade; means of effecting remittances; division of Territorial and Commercial accounts; state of foreign trade with India, *App.* p. 505, 518, 519.

Sumatra:

Calcutta:

Number of ships and amount of tonnage entered inwards at the port of Calcutta, between 1793 and 1831, from Sumatra, *App.* p. 781——Also which cleared outwards from the port of Calcutta, between 1793 and 1831, to Sumatra, and stating the flag under which they sailed, *App.* p. 797.

Madras:

Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from Sumatra, *App.* p. 808 ——Also which cleared outwards, between 1793 and 1831, from the port of Fort St. George, and the ports subordinate thereto, to Sumatra, and stating the flag under which they sailed, *App.* p. 820.

SUPPLIES:

1. *Commerce and Territory.*
2. *India and London.*

1. *Commerce and Territory:*

Combined account of supplies between Commerce and Territory in India, 1814-15 to 1828-29, both inclusive, *App.* p. 106——Amount debited and credited for supplies to the Commercial department from St. Helena, Bencoolen and Prince of Wales Island, *App.* p. 100——Combined account of supplies between India and London, including the heads of His Majesty's Government, Ceylon, Mauritius, Java, the Moluccas, &c. 1814-15 to 1828-29, *App.* p. 101.

2. *India and London:*

Statement explaining generally the difference of result exhibited between the account of "supplies between India and London," as kept in India, and the accounts in England, which it was intended should comprise the same transaction, *App.* p. 93.

Supracargoes. See *Territorial Payments.*

Survey. Between 1807 and 1813, Dr. Hamilton surveyed the following districts, Dinajpur, Boglepur, Rungpur, Purnea, Behar, Shahabad, and Gorukpur; excellence of this work, *Wallick* 2340.

Sweden. Number of ships and amount of tonnage entered inwards at the port of Calcutta, between 1793 and 1831, from Sweden, *App.* p. 774——Also which cleared outwards from the port of Calcutta, between 1793 and 1831, to Sweden, and stating the flag under which they sailed, *App.* p. 790.

Sycee Silver. Value of sycee silver as compared with sicca rupees, *Palmer* 1286—1291, 1298——Comparative value of sycee silver and British standard, *Palmer* 1302——Sycee cannot be Spanish dollars melted down; it must be from the mines of Asia, *Palmer* 1308.

T.

Tape. Quantity of tape received, in each year from 1824-25 to 1830-31, at the port of Madras, from Fort St. George, *App.* p. 932.

Tartary. Value of trade carried on by Russia by caravans with the States of independent Tartary, *Cabell* 1638.
See also *Caspian Sea.*

Taylor, J. W. Letter from Mr. J. W. Taylor to Sir J. Malcolm, Governor of Bombay, on steam communication with India, *App.* p. 727——Letter to Sir J. Beckwith, Vice-president in Council at Bombay, March 1830, *App.* p. 732——Letter to J. P. Willoughby, secretary to the Bombay government, April 1830, *App.* p. 734——Memorandum of Mr. Taylor's proposals to Government for the carriage of the public mails to England and back on steam packets, *App.* p. 734.

TEA:

1. *Generally.*
2. *Duty.*
3. *Imports.*
4. *Plant.*

1. *Generally:*
Fallacious opinions of merchants as to the benefits to be derived from opening the trade of Canton, *Palmer* 1426——Consumption of tea might in this country be carried to any extent, *Palmer* 1429——Probability of the Chinese laying an export duty on tea, *Larpent* 2002——Smuggling trade of tea with China should not be permitted, *Larpent* 2004——Trusting for supply to smugglers would be a very short-sighted policy, *Larpent* 2006-2008——Witness's object to prohibit the import of tea into any port of Great Britain or the British settlements except such as may be purchased at, or shipped from, the port of Canton through the agency of the East India Company, *Larpent* 2017——Manner in which tea is used by the Burmese and Hindoos, *Wallick* 2413——Manner in which an attempt should be made to cultivate tea in India, *Wallick* 2454-2461.

2. *Duty:*
Injurious consequences to the trade of this country through India, owing to the heavy duty on tea in this country, *App.* p. 581.

3. *Imports:*
Return showing the quantity of tea sent into the interior of the Presidency of Bengal from the port of Calcutta, 1793 to 1831, *App.* p. 918——Account of the quantity of tea imported into the United Kingdom, 1793 to 1831, *App.* p. 768.

4. *Plant:*
Observations on the cultivation of the tea plant for commercial purposes, in the mountainous parts of Hindostan, *Wallick, App.* p. 666.

Teak. See *Timber.*

Tents. Number of tents sent into the interior of the Presidency of Fort St. George from the port of Madras, 1823 to 1831, *App.* p. 922.

Tenure of Land. See *Land*, 4.

Territorial Charges. Territorial revenues have never been sufficient to meet Territorial charges during witness's residence in India; caused by increase of expenditure in all departments, *Mackenzie* 54——Accounts between Commerce and Territory, *Leach* 710——Advantages the Company would derive from making several Territorial payments in India instead of this country, *Palmer* 1438——Consequences to India of the amount drawn annually from her for Territorial charges by this country, *Palmer* 1441.

Territorial and Commercial. Difficulty of settling questions between Commercial and Territorial claims, *Leach* 774, 809——Since 1824 there has been no Commercial surplus equal to Territorial debt, *Leach* 812——Advantages which would result from a correct balance sheet of the Commercial and Territorial departments being made out of the separate affairs of each, *Larpent* 1957-1961——Result of witness's examinations as to the nature of the Territorial and Commercial branches, *Crawford* 2025-2029——Documents as at present furnished do not enable any one to come to a correct conclusion, *Crawford* 2030——The union of the administration of the two departments ought not to occasion any difficulty in the way of a correct balance sheet being made out of the separate affairs of each, *Crawford* 2031——Amount due from Territory to Commerce, *Melvill* 2475——Remittances ordered and received in payment of the debt (since 1828-29) due from the territory to the commerce, *Melvill* 2476.
Territorial branch of the affairs of the East India Company in account with the Commercial branch in respect to Territorial and Political payments made in England, 1814 to 1829, *App.* p. 52——Statement to show the sources from which the expenditure and credits contained in the general account current between the Territorial and Commercial branches have been derived, *App.* p. 89——Account of supplies between Commerce and Territory in India, 1814-15 to 1828-29, *App.* p. 108——Abstract account be-

Territorial and Commercial—continued.

tween the Territorial and Commercial branches of the Company's affairs, 1814–15 to 1828–29, in respect to Territorial and Political payments in England, separately from the transactions which relate to the remittance of India debt, *App.* p. 359.

Steps taken for the separation of the Territorial from the Commercial accounts of the Company in India and England; further measures required for that purpose, *Lloyd, App.* p. 445, *Langton, App.* p. 446, *Hill, App.* p. 446, *Wood, App.* p. 446, *Mackenzie, App.* p. 446.

Territorial Debt. See *Debt*, 2.

Territorial Payments. Statement of Territorial payments made by the supracargoes at Canton, and agent at the Cape of Good Hope, from 1st May 1814 to 30 May 1829, as collected from the books of accounts kept at those places respectively, *App* p. 50——Statement of the amount of Political charges incurred in England, deemed chargeable on the Territorial Revenues of India, from 1814–15 to 1828–29, *App.* p. 170.

Correspondence between the Board of Commissioners for the affairs of India and the Court of Directors of the East India Company, relative to a charge made against the Territory for loss sustained in effecting remittances from India to meet bills drawn on the Court for payment of interest on India debt, *App.* p. 354.

Territorial and Political. Abstract account between the Territorial and Commercial branches of the Company's affairs, 1814 to 1828, in respect to Territorial and Political payments in England, separately from the transactions which relate to the remittance of India debt, *App.* p. 359, 407.

Territorial Revenue. Largest amount witness ever knew to be advanced at one time for commercial purposes, *Mackenzie* 682——Territorial revenue in India has been applied to the liquidation of debt, *Leach* 821.——*See* also *Officers.*

Territorial Secretary. Nature of the duties of territorial secretary in Bengal, *Mackenzie* 32.

Territorial Stores. Amount of Territorial Stores from China and the Cape of Good Hope to India, 1814–15 to 1828–29, *App.* p. 171.

Tigris. Information in regard to the result of a survey which has been recently made of the Tigris, *Cabell* 1649——Navigation of the Tigris from Bussorah to Bagdad; wood and bitumen may be had in sufficient abundance for the production of steam; provisions may be procured, *Cabell* 1649——Ascent of the Tigris by Mr. Bowhter from Bagdad to Mosul; Tigris not fordable between Bagdad and Mosul, *Cabell* 1649.

TIMBER:

1. *Generally.*
2. *Digest of Evidence before Lords and Commons.*
3. *Imports into Madras.*

1. *Generally:*

Increased value which might be given to the timber trade of India, *Wallick* 2347, 2364——Kind of trees to be found in the north-east frontier of Oude, *Wallick* 2349——Teak timber is confined to Malabar and Burmese dominions, *Wallick* 2349——Price of timber in Calcutta has increased, *Wallick* 2354——Which has been caused by the felling the trees nearest the river, which enhances the expense of carriage, *Wallick* 2355——Expense of carriage would be greatly obviated if Europeans were allowed to form establishments there for conveying the wood to the nearest river, *Wallick* 2356, 2360——Different varieties of timber in India applicable to building purposes and ship-building, *Wallick* 2357——Forests that used to supply Bombay and Calcutta docks, have fallen off from extreme exhaustion, *Wallick* 2368, 2369——Large supply of timber in the Burman territory, *Wallick* 2370——The only timber imported by the Chinese, except dyeing wood, are rattans, *Wallick* 2380.

See also *African Oak. Forests.*

2. *Digest of Evidence before Lords and Commons:*

Digest of the evidence taken before the Select Committee of the House of Commons, 1832, on Commercial subjects; relating to Timber, *App.* p. 494.

3. *Imports into Madras:*

Value of timber received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 932.

TIN:

1. *Trade of the East India Company.*
2. *Imports into Calcutta and Madras.*

1. *Trade of the East India Company:*

Formerly the East India Company agreed to take a certain portion of tin of the Cornish agents; this contract ceased 1793, *Simons* 944——Profit and loss of the Company on this article, *Simons* 949——Many years attended with loss, some with profit; upon the whole unprofitable, *Simons* 949.

2. *Imports into Calcutta and Madras:*

Return showing the quantity of tin sent into the interior of the Presidency of Bengal, from the port of Calcutta, 1793 to 1831, *App.* p. 918——Similar return of quantity sent from Fort St. George to the provinces of the Madras Presidency, *App.* p. 920.

Tincal. Quantity shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the territories of the three Presidencies, distinguishing each country, *App.* p. 845——Quantity of tincal and borax received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 927.

TOBACCO:

1. *Generally.*
2. *Calcutta.*
3. *Madras.*
4. *Digest of Evidence before Lords and Commons.*

1. *Generally:*

Tobacco is only produced in India for domestic purposes, but has been known in India from time immemorial, *Wallick* 2425, 2427——Natives consume it mixed with other things, for smoking hookah, *Wallick* 2429——Quantity of tobacco produced to the acre in India, *Wallick* 2433——Best sorts might be grown in India provided qualified lands were appropriated to their cultivation, *Wallick, App.* p. 665.

2. *Calcutta:*

Statement showing the quantity of tobacco shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 910——Quantity of tobacco received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 927.

3. *Madras:*

Quantity of tobacco received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 932.

4. *Digest of Evidence before Lords and Commons:*

Digest of evidence given before the Select Committee of the House of Lords 1830, on Commercial subjects; relative to Tobacco, *App.* p. 450——Digest of evidence given in the Reports of Select Committees of the House of Commons on East India Affairs, Second Report 1830, and Reports 1830–31 and 1831; on Commercial subjects; relating to Tobacco, *App.* p. 469——Of the evidence 1832, *App.* p. 483.

Tongues. Return of the number of tongues sent into the interior from the port of Madras, 1823 to 1831, *App.* p. 923.

TRADE:

1. *America.*
2. *Arabian and Persian Gulfs.*
3. *Calcutta.*
4. *China.*
5. *East India Company:*
    - i. Effects of their Trade.
    - ii. Exports and Imports.
    - iii. System in England and India.
    - iv. Profit and Loss.
6. *Free Trade.*
7. *Foreign* Trade.
8. *Internal Trade.*
9. *Digest of Evidence before Lords and Commons:*
    - i. America.
    - ii. China.
    - iii. French.
    - iv. Indian.

1. *American:*

Quantity of English manufactures exported to China by the Americans, *Simons* 911——Native houses generally transact American business, *Bracken* 1806——Nature of American trade with Calcutta, *Bracken* 1923.

See also *America.*

2. *Arabian and Persian Gulfs:*

Statement of the value of merchandize, &c. imported and exported between Calcutta and the Arabian and Persian Gulfs, from May 1821 to April 1828, *App.* p. 632——Statement of the amount of customs collected on the import trade from the Arabian and Persian Gulf, from 1821 to 1828, *App.* p. 633——Statement of the value of merchandize imported and exported from the Madras territories and the Persian and Arabian Gulfs, 1821 to 1828, *App.* p. 634, 635——From Bombay, *App.* p. 636, 637——Statement of the ships and tonnage arrived at and departed from the Madras Presidency and the Persian and Arabian Gulfs 1821 to 1828, *App.* p. 634, 635——From Bombay, *App.* p. 636, 637.

3. *Calcutta:*

Present state of trade as regards merchants houses, *Mackenzie* 267——Merchants houses not more dependent on Government in India than England, *Mackenzie* 269——Nature of the French indigo trade with Calcutta, *Bracken* 1928.

Statement

Trade—continued.

3. *Calcutta*—continued.

Statement of bullion imported into Calcutta by sea, valued in sicca rupees, 1814–15 to 1826–27; prices of various imports into India from this country, in 1815 and 1831, showing the increase and decrease of each per cent., *Crawford, App.* p. 513——Total value of merchandize imported at Calcutta from Great Britain by the private trade, for 15 years, 1813–14 to 1830–31, viz. of copper, iron, woollens, cotton goods and cotton twist, *Manchester Cham. Com., App.* p. 515.

Statement showing the quantity of each article of produce, during each year from 1793 to 1831, shipped at Calcutta to countries beyond the territories of the three Presidencies, distinguishing the countries to which the shipments were made, as far as can be ascertained, *App.* p. 841——Return showing the quantity of each article of foreign production and manufacture sent into the interior of the Presidency of Bengal from Calcutta, 1793 to 1831, *App.* p. 918——Return showing the quantity and value of each article of Indian production or manufacture received, each year 1793 to 1831, at the port of Calcutta, from the interior of the Presidency of Bengal, *App* p. 926.

4. *China:*

Reasons which have induced the Company still to continue their export trade to China, *Simons* 887——Causes of the fluctuation of the China trade, *Simons* 897——Principle on which China cargoes are made up, *Simons* 941——Formerly the Company agreed to take a certain portion of tin; this contract has ceased since 1793, *Simons* 944——Trade in cotton-twist of the East India Company, *Simons* 954——The Company's exports to China have increased in quantity and diminished in cost, *Simons* 995——Tea is now the only article the Company import from China, *Simons* 999——Results of the trade between England, India and China, *Simons* 1433——Fallacious opinions of merchants as to the benefit to be derived from opening the trade of Canton, *Palmer* 1426——Consumption of tea might in this country be carried to any extent, *Palmer* 1429——Impossibility of the Chinese government preventing commercial intercourse, *Bracken* 1916.

Explanations of a statement laid before the Committee concerning the trade between this country and China, *Larpent* 1941——To what extent the trade with China may be thrown open, the only question being the possible collision between the private purchasers and the Chinese sellers of tea, *Larpent* 1942, 1974——East India Company should enjoy no monopoly, except on the ground of its being dangerous to the existence of the trade to remove the restriction, *Larpent* 1943——Difficulties of attempting any trade with China independent of the East India Company, *Larpent* 1998——Necessity of caution in any steps taken towards effecting a free trade, *Larpent* 2000, 2001——Effects of trusting to a supply of tea from smuggling, *Larpent* 2006–2008——Profit on the China trade in each year since 1828–29, *Melvill* 2479——In case of the China trade being thrown open, all docks could collect the revenue upon every article deposited in the docks, for the Crown, at a very great saving of expense, *Hall* 2562.

Account of the exports by the East India Company, for each year from 1814–15, to China, exclusive of Factory stores, *App.* p. 767.

See also *Opium.*

5. *East India Company:*

i. Effects of the Trading of:

Objections to the East India Company remaining traders, *Mackenzie* 214——Evidence concerning the means by which the Company might, on abandoning trade, transmit a large fund from India to England, *Palmer* 1345——No effect to be apprehended by the Company from combination of merchants, as exports to India and China must furnish means of remittance, *Palmer* 1348——Trade should not be incumbered with bond-debt, *Melvill* 2066——Opinions as to the rights of the Company to the property in lands acquired under their authority, as given by the law officers of the Crown, *Melvill* 2073, 2074——Rights of the Company to the possession of their property in India, even should Parliament not renew their charter, *Melvill* 2081–2083——Anxiety of merchants in London that the East India Company should cease to trade, *Larpent* 1989.

Practical effects of the union of government with trade in India, *Liverpool East India Company, App.* p. 519, *Sullivan, App.* p. 519, *Manchester Cham. Com., App.* p. 520, *Glasgow Cham. Com., App.* p. 520, *Mackillop, App.* p. 520, *Bracken, App.* p. 520, *Larpent, App.* p. 524, *Rickards, App.* p. 527.

ii. Exports and Imports:

Company have exported no goods to India for sale since 1824–25, *Simons* 866——Grounds on which the Company discontinued the export of merchandize to India since 1824–25, *Simons* 873——Copper and woollens were the principal articles of the Company's export trade, *Simons* 875——Statement of the value of imports into Bengal and Madras and Bombay, from Great Britain, 1811–12 to 1828–29, distinguishing merchandize from treasure, including the East India Company's imports, *Simons* 881——Ruinous nature of the Company's wine trade, *Simons* 883——Reasons which induce the Company still to continue their export trade to China, *Simons* 887——Since 1826–27, the Company have only exported for military and territorial purposes, *Simons* 891——Account of the quantity exported of cotton-twist by the East India Company, *Simons* 954——

Trade—continued.

5. *East India Company*—continued.

ii. Exports and Imports—*continued.*

Former losses of the Company; more profitable since 1820–21, *Simons* 975——Company has discontinued importation of raw silk and nankeens, *Simons* 975——Tea the only article imported from China, *Simons* 999——Profits of the Company on their export trade; reasons why they cease to export, *Simons* 1137——Profit and loss upon cotton-twist exported to China by the East India Company, *Simons* 1274——Company still import bandannas, *Simons* 1275.

Account of the exports of the East India Company in merchandize to India in each year from 1814, *App.* p. 767.

iii. System in England and India:

System pursued by the Company in the conduct of their commercial transactions in India, whether in the interior or at their respective Presidencies, *Bracken, App.* p. 518, *Crawford, App.* p. 518, *Mackillop, App.* p. 518, *Sullivan, App.* p. 518, *Glasgow Cham. Com., App.* p. 518, *Manchester Cham. Com., App.* p. 518——System pursued by the Company in the conduct of their commercial transactions in England; how far their proceedings prove prejudicial or advantageous to the general interest of Indian commerce, *Mackillop, App.* p. 531, *Machester Cham. Com., App.* p. 531, *Glasgow Cham. Com., App.* p. 531, *Bracken, App.* p. 531, *Crawford, App.* p. 531, *Larpent, App.* p. 532, *Liverpool E. I. Com., App.* p. 532, *Hull Com., App.* p. 532, *Rickards, App.* p. 533.

iv. Profit and Loss:

Profit and loss on Company's goods, together with other profits resulting to the Company in England, together with the ultimate surplus liable to the appropriation 53 Geo. 3, c. 155, 1814–15 to 1819–20, *App.* p. 393——Profit and loss upon all goods sold by the East India Company, distinguishing India and China, and specifying the invoice price, and the several charges respectively; also sale amount; showing likewise the net proceeds of the Commerce in Great Britain, after defraying all charges, 1820–21 to 1825–26, 1829–30, 1830–31, *App.* p. 396, 408——Surplus Commercial profits, 1814 to 1830, after payment of dividends on capital stock, &c. *App.* p. 406——Profit and loss upon all goods sold by the East India Company in 1828–29, distinguishing India and China; specifying invoice price, charges, and sale amount showing; the proceeds of the Commerce in Great Britain; converting prime cost of investment, so far as it consists of re-payments of advances by the Commercial department, at rates of exchange used in Company's books in transactions between the two branches of their affairs, *Leach*, p. 72——Very little trade has been carried on latterly by the Company, their only object being remittance, *Larpent* 1977–1982.

See also *Cotton. Officers of East India Company's Service. Saltpetre. Silk. Tin.*

6. *Free Trade:*

Beneficial results to trade if all restrictions between this country were removed, *Bracken* 1910——Trade with India is practically open, except in such particulars as are connected with political circumstances, *Larpent* 1973——Measures adopted by the Indian Government, rendering competition with the Company in mercantile pursuits less difficult, *Larpent* 1976.

Measures suggested, calculated to advance the interests of Indian commerce, such as the improvement or increase of the exportable productions of India, &c., *Larpent, App.* p. 573, *Mackillop, App.* p. 576, *Manchester Cham. Com., App.* p. 577, *Glasgow Cham. Com., App.* p. 576, *Liverpool E. I. Com., App.* p. 578, *Hull Com. App.* p. 579, *Wood, App.* p. 579, *Rickards, App.* p. 581, *Langton, App.* p. 586, *Hill, App.* p. 586, *Lloyd, App.* p. 587, *Bracken, App.* p. 587, *Crawford, App* p. 588, *Mackenzie, App.* p. 590.

Facilities afforded to persons trading with India, since the opening of the trade 1814, by the repeal or modification of duties or of regulations in India, injuriously affecting the commercial transactions of individuals, *Larpent, App.* p. 505, *Liverpool East India Com., App.* p. 505, *Sullivan, App.* p. 505, *Bracken, App.* p. 505, *Crawford, App.* p 505, *Manchester Cham. Com., App* p. 506, *Glasgow Cham. Com., App.* p. 506, *Mackillop, App.* p. 506. *Hull Com., App.* p. 506.

Extent to which trade with India has increased since 1814, and with regard to the exports from Great Britain, what degree has the increase consisted in British staples, *Larpent, App.* p. 506, *Bracken, App.* p. 510, *Crawford, App.* p. 511, *Glasgow Cham. Com. App.* p. 515, *Manchester Cham. Com. App.* p. 515, *Mackillop, App.* p. 516, *Liverpool. East India Com. App.* p. 516, *Hull Com. App.* 517, *Rickards, App.* p. 517.

7. *Foreign:*

Beneficial effects which have resulted from a relaxation of the navigation laws, as respects the trade with India, although its effect has been limited, *Hall* 2353——Nature of the French trade with India, *Hall* 2524——Manner in which indigo and other Indian goods are imported into France, *Hall* 2526——Trade carrying on between the French ports and India a losing trade, *Hall* 2527.

What are the present arrangements with foreign states in regard to trade with India, and can any improvement be suggested in those relations, *Larpent, App.* p. 564, *Manchester Cham. Com., App.* p. 567, *Glasgow Cham. Com., App.* p. 567, *Liverpool E. I. Com.*

Trade—continued.

7. *Foreign*—continued.

Com. App. p. 567, *Mackillop, App.* p. 567, *Bracken, App.* p. 567, *Hill, App.* p. 567, *Langton, App.* p. 567, *Wood, App.* p. 567, *Mackenzie, App.* p. 568, *Crawford, App.* p. 568; *Hull Com. App.* p. 569.

8. *Internal Trade:*

Trade carried on between India and Central Asia, *Cabell* 1639——Communications from Vice-consul Brant concerning the possibility of carrying on a large trade in the northern provinces of Persia by the Black Sea, *Cabell* 1641——Nature of the trade of Buhawulpoor, *Cabell* 1646——Productions of the city of Mooltan, *Cabell* 1647——Products of India most likely to become articles of commercial importance, *Wallick* 2384.

9. *Digest of Evidence before Lords and Commons:*

i. American Trade:

Digest of the evidence taken before the Select Committee of the House of Commons 1832, on Commercial subjects; on the American Trade, *App.* p. 497.

ii. China Trade:

Digest of evidence taken before the Select Committee of the House of Lords 1830, on Commercial subjects; relative to the China Trade, *App.* p. 457——Relative to opening the China Trade, from the evidence before the House of Commons 1832, *App.* p. 497.

iii. French Trade:

Digest of the evidence given before the Select Committee of the House of Commons 1832, on Commercial subjects; on the French Trade, *App.* p. 497.

iv. India Trade:

Digest of evidence taken before the Select Committees of the House of Commons on East India Affairs, Second Report 1830, and Reports 1830–31 and 1831, on Commercial subjects; relating to the India Trade, *App.* p. 472——Of the evidence of 1832, *App.* p. 496——Digest of evidence taken before the Select Committee of the House of Commons 1832, on Commercial subjects; union of Government with Trade, *App.* p. 487.

Tranquebar and Serampore. Number of ships and amount of tonnage entered inwards, between 1793 and 1831, at the port of Fort St. George, and the ports subordinate thereto, from Tranquebar and Serampore, and stating the flag under which they sailed, *App.* p. 812——Number of ships and amount of tonnage cleared outwards, between 1793 and 1831, from the port of Fort St. George, and the ports subordinate thereto, to Tranquebar and Serampore, and stating the flag under which they sailed, *App.* p. 824.

Transit Duties. Advantageous results to the country of withdrawing all transit duties, and effecting customs duties in lieu thereof, *Mackenzie* 7379——The loss of, would occasion a considerable falling off of the revenue; but if other customs were substituted the loss might be made up, *Mackenzie* 73——Great annoyance occasioned by these duties, *Mackenzie* 77.

Treasure. Statement of the value of imports into Bengal, Madras and Bombay from Great Britain, 1811 to 1829, distinguishing merchandize from treasure, *Simons* 881——Statement of bullion imported into Calcutta by sea, distinguishing the countries, 1814–15 to 1826–1827, *App.* p. 626——Statement of the amount of all treasure imported into and exported from the three Presidencies in India respectively, in each year from 1810–11 to the latest period, distinguishing Europe and America from China, the Eastern Islands, and other principal places, exclusive of shipments of bullion in return for goods from this country, *Palmer* 1373——No country ever did or can permanently export bullion, *Palmer* 1392——Consequences to India of a continual exportation of bullion, *Palmer* 1405——Impossibility for any country to continue to furnish, politically, any payment of bullion that the produce of the country will not re-supply, *Palmer* 1414.

Gold and Silver:

Quantity of gold which it is worth the refiner's while to extract from silver, *Palmer* 1309——Witness's opinion as to the introduction of gold coin for current circulation in India, *Palmer* 1332——Digest of evidence taken before the Select Committees of the House of Commons on East India Affairs, Second Report of 1830, and Reports of 1830–31 and 1831, on Commercial subjects; relating to Gold, *App.* p. 471——Imports and exports of the precious metal to and from India, *Hill, App.* p. 443; *Mackenzie, App.* p. 443——Statement of the amount of all treasure imported into and exported from the three Presidencies of India respectively, in each year 1810–11 to 1827–28, distinguishing Europe and America from China, the Eastern Islands, and other principal places, exclusive of shipments from port to port, *App.* p. 630.

See also *Dollars. Sycee Silver.*

Treasury. Receipts and payments of the Home Treasury, from 1st May 1814 to 1st May 182[illegible] as contained in the accounts annually presented to Parliament, *App.* p. 48.

Treasury Notes. Improvements which might be adopted in the management of Treasury notes, *Mackenzie* 586.

Trees. Improvements recommended as to the growth of trees for the food of elephants, *Wallick* 2443——Unhealthy climate of forests generally, *Wallick* 2375——Trees from forests of Hindostan may be made available for home consumption, but not for exportation, *Wallick* 2378——Time that means should be taken to preserve the forests of Hindostan by making new plantations, *Wallick* 2383——Nature of the trade in African oak; want of knowledge as to the tree producing timber so called, *Wallick* 2365.
See also *Mulberry Trees. Timber.*

Turmeric. Statement showing the quantity of turmeric shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipped, *App.* p. 912——Quantity of turmeric received in each year from 1812-13 to 1829-30, at the port of Calcutta, from Bengal, *App.* p. 927——Quantity of turmeric received, in each year from 1824-25 to 1830-31, at the port of Madras, from Fort St. George, *App.* p. 932.

Tutenague. Return showing the quantity of tutenague sent into the interior of the Presidency of Fort St. George from Madras, 1823 to 1831, *App.* p. 920.

Twine. Statement showing the quantity of twine shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 869——Quantity of twine sent into the interior of the Presidency of Fort St. George from the port of Madras, 1823 to 1831, *App.* p. 922.

Twist. Trade in cotton-twist first began 1820, ceased till 1827; exports of the East India Company in that year; increase in 1828; gradual increase till 1830-31; complaints of the Chinese, *Simons* 954——Disturbances in China on account of the importation of cotton-twist, *Simons* 954——Profit and loss upon cotton-twist exported to China by the East India Company, *Simons* 1274——Establishment of twist mills in India; most probably unable to compete with British manufacture, *Bracken* 1839, 1849——Growing demand for cotton-twist in China; jealousy of the spinners of that country in consequence, *Bracken* 1896.
See also *Cotton*, 4.

U.

United States:

Americans generally trade in bullion or bills, and sometimes manufactures; they take back indigo, silk and a great deal of saltpetre, *Bracken* 1924.

Calcutta:

Nature of the American trade with Calcutta, *Bracken* 1923——Number of ships and amount of tonnage which have entered inwards, between 1793 to 1831, at the port of Calcutta, from America, *App.* p. 773——Also which have cleared outwards from Calcutta to America, and stating the flag under which they sailed, *App.* p. 789.

Madras:

Number of ships and amount of tonnage which have entered inwards, between 1793 to 1831, at the port of Fort St. George, and the ports subordinate thereto, from America, *App.* p. 803——Also which cleared outwards from the port of Fort St. George to America, and stating the flag under which they sailed, *App.* p. 815.

Bombay:

Number of ships and amount of tonnage entered inwards, between 1802-3 and 1829-30, at the ports of Bombay and Surat, from America, *App.* p. 826——Also which cleared outwards to America, and stating the flag under which they sailed, *App.* p. 834.

V.

Vallum Bark. Quantity of vallum bark received, in each year from 1824-25 to 1830-31, at the port of Madras, from Fort St. George, *App.* p. 932.

Vinegar. Return of the quantity of vinegar sent into the interior from Madras, 1823 to 1831, *App.* p. 923.

W.

Waghorn, Mr. Extract of letter from Mr. Waghorn, of the Bengal pilot service, to Sir C. Malcolm, superintendent of the Indian navy, *App.* p. 736——Rapidity with which communication between London and Bombay might be effected; celerity with which intercourse may be kept up by dromedaries through Egypt, *App.* p. 736——Red Sea perfectly safe for steam-vessels; safety of travelling and dispatch superior in Egypt to any other route, *App.* p. 737——By this route, communication might be effected in 50 or 55 days, *App.* p. 737.

Wales, New South. See *New South Wales.*

Wall,

Wall, Mr. Letter from Mr. A. P. Wall to Capt. J. H. Johnston, commander of steam vessels in the Company's service, 1828, *App.* p. 720——Description of a voyage in a steam vessel in India, *App.* p. 720——Names of places; date of leaving; date of arrival; number of hours steaming under weigh; number of hours fire burning; quantity of coal received, *App.* p. 723——A list of pilots employed in the Honourable Company's steam vessel Hooghley during the third voyage to the Upper Provinces, *App.* p. 723.

Wallick, *N.* (Analysis of his Evidence.)—Situations held by witness under the East India Company, 2326——Witness has turned his attention to the botanical and agricultural resources of India, 2327——Publications on this subject, 2328——Two plants are most extensively applied to feeding silk worms, mulberry trees and palma christi, 2330——Superficial nature of the soil in India; generally not more than six inches deep, 2332——Nature of the soil of Bengal, 2334——India generally inferior to no part of the world in fertility of soil and richness of produce, 2335, 2337——Soil of India equal to the Isle of France, with regard to sugar, coffee and cotton, 2336——Description of grains in use in India, 2338——Prejudice against Indian corn in India, 2339——Districts surveyed by Dr. Hamilton, 2340——Nature of the husbandry of Bengal, 2341——Great improvements which have taken place in the indigo districts since the introduction of the Europeans, 2344——Cause of the poverty of the people attributable to their want of exertion, 2345.

Cotton plant reared as an annual in India, while in America it is triennial, 2346——Increased value which might be given to the timber trade of India, 2347——Kind of trees to be found in the north-east frontier of Oude, 2349——Teak timber confined to Malabar and Burmese dominions, 2349——Great falling off which has been experienced in the supply of bamboos, 2351——Nature of the bamboo plant, 2353——Price of timber in Calcutta has increased, 2354——Which has been caused by the felling the trees nearest the river, which enhances the expense of carriage, 2355——Which would be greatly obviated if Europeans were allowed to form establishments there for conveying the wood to the nearest river, 2356.

[Second Examination.]—Different variety of timber in India applicable to building purposes and ship-building, 2357——Use of European skill in teaching natives to convey timber, 2360——Indian timber might become an article of foreign trade, 2364——Nature of the trade in African oak, 2365——Forests that used to supply Bombay and Calcutta docks have fallen off from extreme exhaustion, 2368, 2369——Large supply of timber in the Burman territory, 2370——Unhealthy climate of forests generally, but not so in the newly-acquired territory, 2375——Forests of Hindostan may be made available for home consumption, but not for exportation, 2378——The only timber imported by the Chinese, except dyeing woods, are rattans, 2380——Time that means should be taken to preserve the forests of Hindostan by making new plantations, 2383——Products of India most likely to become articles of commercial importance, 2384——Rude nature of the manufacture of sugar in India, 2390——Bad management of their cotton plants, 2392——Necessity of proximity to the sea for the good cultivation of Sea Island cotton, 2395——In China, the good qualities are cultivated near the sea; in Martaban, the good cottons are also from the sea side, 2395——There are deficiencies in every stage of the cultivation, cleaning and packing the cotton in India, 2399, 2400——Great room for improvement with respect to the cultivation of coffee, 2401.

Encouragement given by the East Indian Government to the cultivation of coffee, 2402——Extent to which the cultivation is carried, 2406——Parts of India best fitted for the growth of coffee, 2411——Manner in which tea is used by the Burmese and Hindoos, 2413——Improvements which might be introduced in the rearing of the silk-worm, 2417——Dwarf or shrubby sort of mulberry is considered by the natives as infinitely preferable, 2418——Improvements in the cultivation of indigo from the introduction of European skill and capital, 2419——Tobacco is only produced in India for domestic use, but has been known in India from time immemorial, 2425–2427——Natives consume it, mixed with other things, for smoking the hookah, 2429——Quantity of tobacco produced to the acre in India, 2433——Plants which produce lac-dye; improvements in the extraction of the dye, 2432–2439——Spices, &c. might be produced in quantities only to be limited by the demand, 2440——Improvements recommended as to growth of trees for the food of elephants, &c., 2443——Goodness of meat in Calcutta, 2446——Growth of the potatoe, 2449——Manner in which an attempt should be made to cultivate tea in India, 2454–2461.

Wallick, Dr. Extract of a Letter from Dr. Wallick to H. St. George Tucker, esq. on the productions of India, *App.* p. 665——Observations on the cultivation of the tea-plant for commercial purposes in the mountainous parts of Hindostan, *App.* p. 666——Cultivation of cotton the produce of the West Indies with complete success in the Company's territories, *App.* p. 665——Increase of the cultivation of coffee in Bengal, first commenced 1822; permission for this purpose granted by the Company to hold large tracts of land, *App.* p. 665——General willingness of the Company to give every assistance to persons wishing to invest their capital in India, *App.* p. 665——Spinning and weaving machinery worked by steam, has been sent out to Bengal, *App.* p. 665——Nipal paper loses all its virtue as soon as it is produced by means of European paper mills, and blanched by European art, *App.* p. 666.

War in India. Probability of the Company possessing sufficient funds in case of war, *Mackenzie* 303.

Warden, Captain. Letter from Capt. W. Warden, of the East India Company's marine, to the Marine Board at Bengal, May 1829, on steam navigation in India, *App.* p. 715——Description of a voyage in the Hooghley, *App.* p. 715——Suggestion for the alteration of the wheels of Steam-vessels, which might be accomplished at a trifling expense, and add considerably to safety, *App.* p. 716——List of packages taken up as freight, *App.* p. 718——Names of places, dates of arrival, names of places arrived at, number of hours steaming, quantity of coal taken in at each station, quantity left, distance between each station, *App.* p. 719.

Warehouse Committee. Duties of the Buying and Warehouse Committee, *Simons* 841——Manner in which purchases are made, *Simons* 842——Expenses of this office and establishment, *Simons* 857——Number of persons employed, and amount of salaries in the Warehouse department, *Simons* 861.

Waste. Whether any instances of considerable loss or waste have come to your knowledge during the last charters of the East India Company, and whether the system of accounts, whether general, subordinate or personal, is such as is best calculated to guard against loss, to prevent unauthorized disbursements, and to compel the bringing to account, promptly and accurately, public money or stores received and expended, either by individuals or by departments, and whether any suggestion can be offered for improving and simplifying the existing system of accounts, *Langton, App.* p. 447, *Wood, App.* p. 447, *Mackenzie, App.* p. 447, *Hill, App.* p. 448.

Water Communication. Digest of evidence taken before the Select Committee of the House of Lords 1830, on Commercial subjects; relative to Canals, *App.* p. 457——Considerations relative to the applicability of canals to India, *App.* p. 671——Expense of forming canals in India, *App.* p. 691——Returns which they would make; difficulties that might be expected, considering the present state of the arts in that country; and what particular lines there are in which such works would be most likely to be beneficial, *App.* p. 671–675.

Wax and Wax Candles. Statement showing the quantity of wax candles shipped, 1793 to 1830, at Calcutta, to countries beyond the three Presidencies, distinguishing countries to which shipments were made, *App.* p. 914——Quantity of wax and wax candles received, in each year from 1812–13 to 1829–30, at the port of Calcutta, from Bengal, *App.* p. 927——Quantity of wax received, in each year from 1824–25 to 1830–31, at the port of Madras, from Fort St. George, *App.* p. 932.

Wear and Tear. Principle on which the column headed Wear and Tear in the East India Company's accounts is made up, *Simons* 1065.

Wellington, Marquis of (ship). Expeditious voyage made from London to Calcutta by the Marquis of Wellington, *Peacock* 1519——She passed the Lizard Point on the 10th June, and saw Point Palmyra on the 30th August 1829, being 81 days from point to point, *Peacock* 1519.

Wilkinson, John. (Analysis of his Evidence.)—Proceeded to India to superintend the introduction of an improvement in silk reeling for Mr. Heathcoat, 2102——Partial success of the scheme after trial at Sautipoor, 2107——The plan was for insuring a more even thread, by dividing the cocoons into sets, 2110–2112——This plan was introduced into Italy 1824, 2113——The Directors declined using the invention; the Government of India were willing the experiment should be made, 2114–2116——Experiments in India at Sautipoor and Rungpoor, 2117, 2119——Cocoons in India are not all of the same kind; it depends very much upon the seasons in which they are spun, 2125——Mulberry tree in cultivation in India is called the Indian Variety, 2127——Which is ready for picking about four months after they are planted, 2132——Two systems of cultivation pursued, the one standard, the other jungle or coppice, 2133——At Sautipoor crops are gathered March or April, July and November, 2137——Crops in the rains are most abundant, 2139——Jungle trees grow to the height of six feet, 2143——Manner in which hedgerows are cultivated, 2146–2153.

Ryots are the producers of the mulberry in India, 2154——The same parties keep the worms, 2155——The leaves for feeding the worms are chopped up small, 2160——Country worm hatches four times a year, large annual only once, 2166——Silk from both worms alike, 2170——Difference in silk is produced from the difference of season in which the cocoon is spun, 2169——Periods after hatching at which worms finish their cocoons vary, 2175——Process of hatching the worms, 2176——The worms are kept in a dark place during the whole process of feeding, 2180——Process used by the peasantry in reeling is similar to that used in the Company's filatures, but inferior, 2183——Process used in the filatures of reeling, 2184——Improvement of Mr. Heathcoat has been introduced into France and Italy very generally, 2189——Destruction of competition between private traders and the Company owing to the price given by the Company to the rearers of cocoons, 2190, 2191——Causes which induced the Company to give high prices for raw silk, 2194——Causes of the inferiority of Indian silk, 2198——Considerable improvement might be effected in the cocoons in India, 2201——Worms are generally fed and bred in huts, 2202——Comparative labour between a native of India and a European reeling silk, 2204, 2205.

Wilkinson, John. (Analysis of his Evidence)—*continued.*

Advances made by the government to pykars, 2208, 2209——Who settle everything with the peasants, 2211——The resident in no degree superintends the actual productions of the cocoons, 2212–2214——System by which the advances of the Company are repaid, 2222——When wound the silk is placed in store till sent down to be shipped, 2233——Silk establishment of India generally on a good economical footing, 2235——Expenses of India double what they are in this country, 2244——Necessity for the agents of the Company to be well appointed, 2246–2248——Amount of silk produced at Sautipoor in 1826, 2257——Nature of the work in factories, 2260–2263——There are twelve residencies where silk is got up, 2267——All in the province of Bengal, 2270——Interest taken by Mr. Marjoribanks in the cultivation of the silk trade, 2276——His attempts to introduce a Neez cultivation, 2276–2278——Country worms are better than annuals, 2285——A biggah of plants will feed about 1,000 worms a day, 2289——Quantity of silk produced is greater during the rainy season, but the quality is inferior, 2291, 2292——Proportion of silk that a given quantity of cocoons will produce, 2293——Indian silk as compared with the silk of other countries is foul and uneven, 2298.

Improvements which might be made in the management of the growth of silk in India, 2310——And in their manner of cleaning their silk on the reel, 2311, 2312——Rent of land for the production of silk much higher than other land, 2318–2321——Bengal cocoons are capable of great improvement, and the silk might be materially improved by winding with greater care and attention, 2325.

Wilkinson, R. Correspondence with Mr. R. Wilkinson, and statements prepared by him for Mr. Rickards, relating to the views therein taken of the finances of the East India Company, *App.* p. 368——Stating that he cannot find in the Company's accounts materials for stating an accurate account of the Company's Commercial affairs, for a given series of years, distinct from their other revenues, *App.* p. 368——The papers furnish the means of separating Territorial and Political charges, *App.* p. 368——Statement containing dates, debts, gross revenue, references, charges, including those on subsidies, and of ceded and conquered countries; net charges of Bencoolen, Prince of Wales Island and St. Helena; Political and Territorial charges paid in England; interest adequate to the apparent debt; total amount of charges, including interest; repayment of debt; surplus revenue each year, and deficient revenues, *App.* p 370–375——Queries relative to the above statement; also explanations, *App.* p. 376, 377——Remarks on the statements relating to the finances of India, forwarded by Mr. Rickards, *App.* p. 380.

Wilson, J. H. Extract letter from acting commander J. H. Wilson, to Sir C. Malcolm, superintendent of the Indian navy, on a passage from Suez in a steam vessel 1830, *App.* p. 741——Paper sent by Capt. Wilson to the Court of Directors, 1830, on steam communication with India, and on the rivers of India, *App.* p. 743——Description of a voyage to and from Suez by steam, *App.* p. 741——Difficulties encountered on the voyage; vessel made the voyage to Suez and back without any accident whatever; no repairs necessary, except those which could be done on board, *App.* p. 742——Communication with Suez would be best carried on by two stages, one from Bombay to Aden, and from thence to Suez; much expense would thus be saved, *App.* p. 743——Every object of overland communication would be equally well attained if vessels went no higher than Cosseir, *pp.* p. 743——Abstract from the log-book of the Honourable Company's armed steamer ugh Lindsay, of the times and rates of performance of the passage from Bombay to uez and back, *App.* p. 744.

ne. Ruinous nature of the Company's wine trade, *Simons* 883——Taste of the natives of Calcutta for wine and spirits, *Bracken* 1934——Drinking wine not a violation of religion, but custom, *Bracken* 1938——Return of the quantity of wines, distinguishing each sort, sent into the interior of the Presidency of Fort St. George, from the port of Madras, 1823 to 1831, *App.* p. 923.

ood, Mr. (Answers to Queries from the India Board.)—Principal causes which have ffected the revenues of India since 1808–9, either by the improvement or deterioration f old or introduction of new resources, *App.* p. 428——Causes which have affected the mount of charge in the various departments since 1808–9, *App.* p. 432——Measures uggested for rendering the existing revenues more productive, or for realizing the revenues ith more regularity and promptitude, *App.* p. 437——Measures suggested calculated to duce the charge of Indian revenue and to introduce more economy, *App.* p. 439——umber of mints in India 1809 and at the present time; regulations of existing mints; ndition of the various currencies at present and former periods; imports and exports he precious metals, *App.* p. 442——Steps taken for the separation of the Territorial Commercial accounts of the Company; further measures required for that purpose, . p. 446——Loss or waste which may have happened since 1809; how far the m of accounts is a check against loss; suggestions for improving the system, *App.* 7.

nswers to Queries proposed by the Board of Control upon subjects connected with rade of India.)—Present arrangement with foreign States in regard to trade with ; improvements which may be suggested in those relations, *App.* p. 567——Measuggested calculated to advance the interests of Indian commerce, such as the vement or increase of the exportable productions of India, *App.* p. 579.

Wood. Quantity of red wood received, in each year from 1824-25 to 1830-31, at the port of Madras, from Fort St. George, *App.* p. 932.

Wool. Digest of evidence given in the Reports of Select Committees of the House of Commons on East India Affairs, Second Report 1830, and Reports 1830-31 and 1831, on Commercial subjects; relative to Wool, *App.* p. 469.

Woollens. Formerly one of the principal exports of the East India Company to India, *Simons* 875——Lowness of the price of woollens compared with 1809, *Simons* 805——Could never be provided in a better way than they now are for the Indian army, *Simons* 1132——Broad cloths formerly dyed for the East India Company in London; practice now discontinued, *Simons* 912——Long-ells still dyed in London, *Simons* 917——Dyeing long-ells might be done cheaper by contracting with one or two large houses, instead of dividing it into many portions, *Simons, App.* p. 1236——Manner in which circulars are distributed for contracts for dyeing long-ells in London, *Simons* 1246.

Total value of woollens imported at Calcutta from Great Britain by the private trade, for 15 years, 1813-14 to 1830-31, *App.* p. 516——Quantity of woollens received, in each from 1824-25 to 1830-31, at the port of Madras, from Fort St. George, *App.* p. 932.

Wootz. Manufacture of wootz on the coast, *Bracken* 1851.

Y.

Yarn. Quantity shipped, 1793 to 1830, at the port of Calcutta, to countries beyond the territories of the three Presidencies, distinguishing each country, *App.* p. 855.

Z.

Zemindars. Character of Bengal zemindars, *Mackenzie* 114——Zemindars of Bengal demand too much generally from the people, *Mackenzie* 143——Peasantry have no practical remedy against the zemindar's oppression, *Mackenzie* 144.

Zunmay Chiefs. Overture made to Dr. Richardson from the Zunmay chiefs for a British officer to be sent to their court, which was complied with; result of this visit, *Cabell* 1631——Anxiety to receive a British officer, *Cabell* 1631.
